Package 'DSI'

May 7, 2026

Type Package

Title 'DataSHIELD' Interface

Version 1.8.0

Description 'DataSHIELD' is an infrastructure and series of R packages that enables the remote and 'non-disclosive' analysis of sensitive research data. This package defines the API that is to be implemented by 'DataSHIELD' compliant data repositories.

Depends R (>= 4.3), methods, progress, R6,

Imports cli

Suggests testthat (>= 2.1.0)

`datashield.aggregate` *Data aggregation*

Description

Aggregates the expression result using the specified aggregation method in the current Datashield session.

Usage

```
datashield.aggregate(
  conns,
  expr,
  async = TRUE,
  success = NULL,
  error = NULL,
  errors.print = getOption("datashield.errors.print", FALSE)
)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.
expr	Expression to evaluate.
async	Whether the result of the call should be retrieved asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.
success	Callback function that will be called each time an aggregation result is received from a connection. The expected function signature is the connection/study name and the result value. Default is NULL (no callback).
error	Callback function that will be called each time the aggregation request has failed. The expected function signature is the connection/study name and the error message. Default is NULL (no callback).
errors.print	Boolean, whether to print datashield errors in the console or return a message indicating that they can be retrieved using 'datashield.errors'.

Value

The result of the aggregation

Examples

```
## Not run:
# call aggregate function on server side asynchronously
# i.e. each study connection will process the request in parallel
result <- datashield.aggregate(conns, expr = quote(someFunction(D, 123)))

# call aggregate function on server side synchronously, i.e. each study
# connection will be called, one after the other, in a blocking way
result <- datashield.aggregate(conns, expr = quote(someFunction(D, 123)), async = FALSE)

# call aggregate functions that are defined in the provided named list.
# Connections are filtered by the list names.
result <- datashield.aggregate(conns,
  list(server1=quote(someFunction(D, 123)), server2=quote(someFunction(G, 456))))

# call aggregate function with callback functions
result <- datashield.aggregate(conns, expr = quote(someFunction(D, 123)),
  success = function(server, res) {
    # do something with server's result value
  },
  error = function(server, error) {
    # do something with server's error message
  })

## End(Not run)
```

datashield.assign *Data assignment (table or expression result)*

Description

Assign a table or an expression result to a R symbol in the Datashield R session. Note that usage of usage of respectively datashield.assign.table or datashield.assign.expr should be preferred for readability.

Usage

```
datashield.assign(
  conns,
  symbol,
  value,
  variables = NULL,
  missings = FALSE,
  identifiers = NULL,
  id.name = NULL,
  async = TRUE,
  success = NULL,
  error = NULL
)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.
symbol	Name of the R symbol.
value	Fully qualified name of a table reference in data repositories (see datashield.assign.table for more details) OR a R expression with allowed assign functions calls (see datashield.assign.expr for more details).
variables	List of variable names or Javascript expression that selects the variables of a table (ignored if value does not refere to a table). See javascript documentation: http://opaldoc.obiba.org/en/latest/magma-user-guide/variable/
missings	If TRUE, missing values will be pushed from data repository to R, default is FALSE. Ignored if value is an R expression.
identifiers	Name of the identifiers mapping to use when assigning entities to R (if supported by data repository).
id.name	Name of the column that will contain the entity identifiers. If not specified, the identifiers will be the data frame row names. When specified this column can be used to perform joins between data frames.
async	Whether the result of the call should be retrieved asynchronously (TRUE means that calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests).

success	Callback function that will be called each time an assignment is successful. The expected function signature is the connection/study name. Default is NULL (no callback).
error	Callback function that will be called each time the assignment request has failed. The expected function signature is the connection/study name and the error message. Default is NULL (no callback).

Examples

```
## Not run:
# assign a list of variables from table CNSIM1
datashield.assign(conn, symbol="D", value="CNSIM.CNSIM1",
  variables=list("GENDER","LAB_GLUC"))

# assign all the variables matching 'LAB' from table CNSIM1
datashield.assign(conn, symbol="D", value="CNSIM.CNSIM1",
  variables="name().matches('LAB_')")

# do assignment with callback functions
datashield.assign(conns, "D",
  list(server1="CNSIM.CNSIM1", server2="CNSIM.CNSIM2"),
  success = function(server) {
    # do something with server's success
  },
  error = function(server, error) {
    # do something with server's error message
  })

## End(Not run)
```

---

datashield.assign.expr

Expression result assignment

Description

Assign the result of the execution of an expression to a R symbol in the Datashield R session.

Usage

```
datashield.assign.expr(
  conns,
  symbol,
  expr,
  async = TRUE,
  success = NULL,
  error = NULL,
  errors.print = getOption("datashield.errors.print", FALSE)
)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.
symbol	Name of the R symbol.
expr	R expression with allowed assign functions calls.
async	Whether the result of the call should be retrieved asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.
success	Callback function that will be called each time an assignment is successful. The expected function signature is the connection/study name. Default is NULL (no callback).
error	Callback function that will be called each time the assignment request has failed. The expected function signature is the connection/study name and the error message. Default is NULL (no callback).
errors.print	Boolean, whether to print datashield errors in the console or return a message indicating that they can be retrieved using 'datashield.errors'.

Examples

```
## Not run:
# assign an expression to G asynchronously
datashield.assign.expr(conns, symbol = "G", expr = quote(as.numeric(D$GENDER)))

# assign an expression to G synchronously
datashield.assign.expr(conns, symbol = "G", expr = quote(as.numeric(D$GENDER)), async = FALSE)

# assign the expressions that are defined in the provided named list.
# Connections are filtered by the list names.
datashield.assign.expr(conns, "G",
  list(server1=quote(as.numeric(D$GENDER)), server2=quote(as.numeric(D$SEX))))

# do assignment with callback functions
datashield.assign.expr(conns, symbol = "G", expr = quote(as.numeric(D$GENDER)),
  success = function(server) {
    # do something with server's success
  },
  error = function(server, error) {
    # do something with server's error message
  })

## End(Not run)
```

---

datashield.assign.resource

Resource assignment

Description

Assign a resource object of class 'ResourceClient' to a R symbol in the Datashield R session.

Usage

```
datashield.assign.resource(
  conns,
  symbol,
  resource,
  async = TRUE,
  success = NULL,
  error = NULL,
  errors.print = getOption("datashield.errors.print", FALSE)
)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.
symbol	Name of the R symbol.
resource	Fully qualified name of a resource reference in the data repository (can be a vector or must be the same in each data repository); or a named list of fully qualified resource names (one per server name); or a data frame with 'server' and 'resource' columns (such as the one that is used in datashield.login)
async	Whether the result of the call should be retrieved asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.
success	Callback function that will be called each time an assignment is successful. The expected function signature is the connection/study name. Default is NULL (no callback).
error	Callback function that will be called each time the assignment request has failed. The expected function signature is the connection/study name and the error message. Default is NULL (no callback).
errors.print	Boolean, whether to print datashield errors in the console or return a message indicating that they can be retrieved using 'datashield.errors'.

Examples

```
## Not run:
# assign a resource asynchronously
datashield.assign.resource(conn, symbol="rsrc", resource="RSRC.CNSIM1")

# assign a resource synchronously
datashield.assign.resource(conn, symbol="rsrc", resource="RSRC.CNSIM1", async = FALSE)

# assign the tables that are defined in the logindata ('server' and 'resource' columns are
# expected) data frame that is used in datashield.login() function. Connections names
# and server names must match.
datashield.assign.resource(conns, "rsrc", logindata)
```

```
# assign the resources that are defined in the provided named list.
# Connections are filtered by the list names.
datashield.assign.resource(conns, "rsrc",
  list(server1="RSRC.CNSIM1", server2="RSRC.CNSIM2"))

# do assignment with callback functions
datashield.assign.resource(conn, symbol="rsrc",
  resource = list(server1="RSRC.CNSIM1", server2="RSRC.CNSIM2"),
  success = function(server) {
    # do something with server's success
  },
  error = function(server, error) {
    # do something with server's error message
  })

## End(Not run)
```

`datashield.assign.table` *Table assignment*

Description

Assign a table to a R symbol in the Datashield R session.

Usage

```
datashield.assign.table(
  conns,
  symbol,
  table,
  variables = NULL,
  missings = FALSE,
  identifiers = NULL,
  id.name = NULL,
  async = TRUE,
  success = NULL,
  error = NULL,
  errors.print = getOption("datashield.errors.print", FALSE)
)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.
symbol	Name of the R symbol.

table	Fully qualified name of a table in the data repository (can be a vector or must be the same in each data repository); or a named list of fully qualified table names (one per server name); or a data frame with 'server' and 'table' columns (such as the one that is used in datashield.login)
variables	List of variable names or Javascript expression that selects the variables of a table. See javascript documentation: http://opaldoc.obiba.org/en/latest/magma-user-guide/variable/
missings	If TRUE, missing values will be pushed from data repository to R, default is FALSE. Ignored if value is an R expression.
identifiers	Name of the identifiers mapping to use when assigning entities to R (if supported by the data repository).
id.name	Name of the column that will contain the entity identifiers. If not specified, the identifiers will be the data frame row names. When specified this column can be used to perform joins between data frames.
async	Whether the result of the call should be retrieved asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.
success	Callback function that will be called each time an assignment is successful. The expected function signature is the connection/study name. Default is NULL (no callback).
error	Callback function that will be called each time the assignment request has failed. The expected function signature is the connection/study name and the error message. Default is NULL (no callback).
errors.print	Boolean, whether to print datashield errors in the console or return a message indicating that they can be retrieved using 'datashield.errors'.

Examples

```
## Not run:
# assign a list of variables from table CNSIM1
datashield.assign.table(conn, symbol="D", table="CNSIM.CNSIM1",
  variables=list("GENDER","LAB_GLUC"))

# assign all the variables matching 'LAB' from table CNSIM1
datashield.assign.table(conn, symbol="D", table="CNSIM.CNSIM1",
  variables="name().matches('LAB_')")

# assign the tables that are defined in the logindata ('server' and 'table' columns are
# expected) data frame that is used in datashield.login() function. Connections
# are filtered by the list names.
datashield.assign.table(conns, "D", logindata)

# assign the tables that are defined in the provided named list.
# Connections are filtered by the list names.
datashield.assign.table(conns, "D",
  list(server1="CNSIM.CNSIM1", server2="CNSIM.CNSIM2"))

# do assignment with callback functions
```

```
datashield.assign.table(conns, "D",
  list(server1="CNSIM.CNSIM1", server2="CNSIM.CNSIM2"),
  success = function(server) {
    # do something with server's success
  },
  error = function(server, error) {
    # do something with server's error message
  })

## End(Not run)
```

`datashield.connections` *List the DSConnection objects in the analytic environment*

Description

This function identifies and prints all DSConnection-class objects in the analytic environment. If there are no DSConnection servers in the analytic environment datashield.connections reminds the user that they have to login to a valid set of DataSHIELD aware servers. If there is only one set of DSConnections, it copies that one set and names the copy 'default.connections'. This default set will then be used by default by all subsequent calls to client-side functions. If there is more than one set of DSConnections in the analytic environment, datashield.connections tells the user that they can either explicitly specify the DSConnections to be used by each client-side function by providing an explicit "datasources=" argument for each call, or can alternatively use the datashield.connections_default function to specify a default set of DSConnections to be used by all client-side calls unless over-ruled by the 'datasources=' argument.

Usage

```
datashield.connections(env = getOption("datashield.env", globalenv()))
```

Arguments

env	The environment where to search for the connection symbols. Try to get it from the 'datashield.env' option, with default to the Global Environment.

Value

Returns a list of DSConnection-class objects and advises the user how best to respond depending whether there are zero, one or multiple connections detected.

See Also

Other Connections management: datashield.connections_default(), datashield.connections_find()

`datashield.connections_default` *Set or get the default list of DSConnection objects in the analytic environment*

Description

By default if there is only one set of `DSConnection-class` objects that is available for analysis, all DataSHIELD client-side functions will use that full set of DSConnections unless the 'datasources=' argument has been set and specifies that a particular subset of those DSConnections should be used instead. The correct identification of the full single set of opals is based on the datashield.connections_find function. To illustrate, if the single set of Opals is called 'study.opals' and consists of six servers numbered studies[1] to studies[6] then all client-side functions will use data from all six of these 'studies' unless, say, datasources=studies[c(2,5)] is declared and only data from the second and fifth studies will then be used. On the other hand, if there is more than one set of DSConnections in the analytic environment client-side functions will be unable to determine which set to use. The function datashield.connections_find has therefore been written so that if one of the DSConnection sets is called 'default.connections' then that set - i.e. 'default.connections' - will be selected by default by all DataSHIELD client-side functions. If there is more than one set of DSConnections in the analytic environment and NONE of these is called 'default.connections', the function datashield.connections_find will fail. Therefore datashield.connections_default copies the provided set of DSConnections as 'default.connections'. This set will then be selected by default by all client-side functions, unless it is deleted and an alternative set of DSConnections is copied and named 'default.connections'. Regardless how many sets of DSConnections exist and regardless whether any of them may be called 'default.connections', the 'datasources=' argument overrides the defaults and allows the user to base his/her analysis on any set of DSConnections and any subset of those DSConnections.

Usage

```
datashield.connections_default(
  name = NULL,
  env = getOption("datashield.env", globalenv())
)
```

Arguments

`name`	Symbol name that identifies the set of `DSConnection-class` objects to be used by default. If not provided, the 'default.connections' variable value is returned.
`env`	The environment where to search for the connection symbols. Try to get it from the 'datashield.env' option, with default to the Global Environment.

Value

The 'default.connections' value from the analytic environment or NULL if the 'default.connections' symbol is not defined.

See Also

Other Connections management: `datashield.connections()`, `datashield.connections_find()`

`datashield.connections_find`

Search for DSConnection objects in the analytic environment

Description

If the user does not set the argument 'datasources' in the client side analysis functions, this function is called to search for `DSConnection-class` objects in the environment (default environment is the Global one). If one set of DSConnection objects is found, it is assigned to 'default.connections' symbol in the analytic environment. If more than one set of DSConnection objects is found and none of them is called 'default.connections', the function stops and suggests user to use the datashield.connections_default function.

Usage

```
datashield.connections_find(env = getOption("datashield.env", globalenv()))
```

Arguments

`env`	The environment where to search for the connection symbols. Try to get it from the 'datashield.env' option, with default to the Global Environment.

Value

Returns a list of `DSConnection-class` objects or stops the process

See Also

Other Connections management: `datashield.connections()`, `datashield.connections_default()`

`datashield.errorMessages`

datashield.errorMessages

Description

Retrieve and display DataSHIELD errors in CLI format

Usage

```
datashield.errorMessages()
```

Details

This function retrieves the last errors occurred in a DataSHIELD session and displays them in a formatted manner using bullet points.

Value

NULL if no errors are found, otherwise prints the errors.

`datashield.errors` *datashield.errors*

Description

Retrieve and display the last errors occurred in a DataSHIELD session.

Usage

```
datashield.errors()
```

Value

NULL if no errors are found, otherwise a list containing the errors for each server.

`datashield.login` *Logs in a DataSHIELD R sessions and optionaly assigns variables to R*

Description

This function allows for clients to login to data repository servers and (optionaly) assign all the data or specific variables from the data repositories tables to R data frames. The assigned dataframes (one for each data repository) are named 'D' (by default). Different login strategies are supported: using a certificate/private key pair (2-way SSL encryption mechanism), using user credentials (user name and password) or using a personal access token (could be combined with a user name, depending on the data repository system).

Usage

```
datashield.login(
  logins = NULL,
  assign = FALSE,
  variables = NULL,
  missings = FALSE,
  symbol = "D",
  id.name = NULL,
  opts = getOption("datashield.opts", list()),
```

```
  restore = NULL,
  failSafe = FALSE
)
```

Arguments

logins	A dataframe table that holds login details. This table holds five elements required to login to the servers where the data to analyse is stored. The expected column names are 'driver' (the DSDriver-class name, default is "OpalDriver"), 'server' (the server name), url' (the server url), 'user' (the user name or the certificate PEM file path), 'password' (the user password or the private key PEM file path), 'token' (the personal access token, ignored if 'user' is defined), 'table' (the fully qualified name of the table in the data repository), 'resource' (the fully qualified name of the resource reference in the data repository), 'profile' (an optional DataSHIELD profile name), 'options' (the SSL options). An additional column 'identifiers' can be specified for identifiers mapping (if supported by data repository). See also the documentation of the examplar input table logindata for details of the login elements.
assign	A boolean which tells whether or not data should be assigned from the data repository table to R after login into the server(s).
variables	Specific variables to assign. If assign is set to FALSE this argument is ignored otherwise the specified variables are assigned to R. If no variables are specified (default) the whole data repository's table is assigned.
missings	If TRUE, missing values will be pushed from data repository to R, default is FALSE.
symbol	A character, the name of the data frame to which the data repository's table will be assigned after login into the server(s).
id.name	Name of the column that will contain the entity identifiers. If not specified, the identifiers will be the data frame row names. When specified this column can be used to perform joins between data frames.
opts	Default SSL options to be used in case it is not specified in the logins structure.
restore	The workspace name to restore (optional).
failSafe	Ignores, with a warning, the servers for which the connection cannot be established. Optional, default is FALSE.

Value

object(s) of class DSConnection

Examples

```
## Not run:

#### The below examples illustrate an analysises that use test/simulated data ####

# build your data.frame
builder <- newDSLoginBuilder()
```

```
builder$append(server="server1", url="https://opal-demo.obiba.org",
               table="datashield.CNSIM1", resource="datashield.CNSIM1r",
               user="dsuser", password="password",
               options="list(ssl_verifyhost=0,ssl_verifypeer=0)")
builder$append(server="server2", url="dslite.server",
               table="CNSIM2", resource="CNSIM2r", driver="DSLiteDriver")
builder$append(server="server3", url="https://molgenis.example.org",
          table="CNSIM3", resource="CNSIM3r", token="123456789", driver="MolgenisDriver")
builder$append(server="server4", url="dslite.server",
               table="CNSIM4", resource="CNSIM4r", driver="DSLiteDriver")
logindata <- builder$build()

# or load the data.frame that contains the login details
data(logindata)

# Example 1: just login (default)
connections <- datashield.login(logins=logindata)

# Example 2: login and assign the whole dataset
connections <- datashield.login(logins=logindata, assign=TRUE)

# Example 3: login and assign specific variable(s)
myvar <- list("LAB_TSC")
connections <- datashield.login(logins=logindata, assign=TRUE, variables=myvar)

# Example 4: ignore with a warning message servers for which connection cannot be established
connections <- datashield.login(logins=logindata, failSafe=TRUE)

# note that the asignment information can also be provided afterwards
builder <- newDSLoginBuilder()
builder$append(server="server1", url="https://opal-demo.obiba.org",
               user="dsuser", password="password")
builder$append(server="server2", url="https://opal-test.obiba.org",
               token="123456789")
logindata <- builder$build()
connections <- datashield.login(logins=logindata)
datashield.assign.table(connections, symbol = "D",
                        table = list(server1 = "CNSIM.CNSIM1",
                                     server2 = "CNSIM.CNSIM2"))
datashield.assign.resource(connections, symbol = "rsrc",
                           resource = list(server1 = "res.CNSIM1",
                                        server2 = "res.CNSIM2"))

## End(Not run)
```

`datashield.logout` *Logout from DataSHIELD R sessions*

Description

Clear the Datashield R sessions and logout from DataSHIELD data repositories.

Usage

```
datashield.logout(conns, save = NULL)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.
save	Save datashield sessions on each DataSHIELD data repository (if feature is supported) with provided ID (must be a character string).

---

datashield.methods *List of DataSHIELD methods*

Description

Get the list of all the DataSHIELD methods from the different data repositories.

Usage

```
datashield.methods(conns, type = "aggregate")
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.
type	Type of the method: "aggregate" (default) or "assign".

Value

Methods details from all the servers.

---

datashield.method_status *Status of the DataSHIELD methods*

Description

Get the status of the DataSHIELD methods in the different data repositories to check if any method is missing.

Usage

```
datashield.method_status(conns, type = "aggregate")
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.
type	Type of the method: "aggregate" (default) or "assign".

Value

Methods availability on each server.

`datashield.pkg_check` *Check server-side package minimum version*

Description

Check for each of the server, accessible through provided `DSConnection-class` objects, whether the installed

Usage

```
datashield.pkg_check(
  conns,
  name,
  version,
  env = getOption("datashield.env", globalenv())
)
```

Arguments

`conns`	`DSConnection-class` object or a list of `DSConnection-class`s.
`name`	The name of the server-side package.
`version`	The minimum package version number to be matched.
`env`	Environment where the package status result should be cached. Try to get it from the 'datashield.env' option, with default to the Global Environment.

`datashield.pkg_status` *Status of the DataSHIELD packages*

Description

Get the status of the DataSHIELD packages in the different data repositories to check if any package is missing.

Usage

```
datashield.pkg_status(conns)
```

Arguments

`conns`	`DSConnection-class` object or a list of `DSConnection-class`s.

Value

Packages status for each server.

datashield.profiles *List of DataSHIELD profiles*

Description

Get the list of all the DataSHIELD profiles from the different data repositories: available ones and currently applied to each connection.

Usage

```
datashield.profiles(conns)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.

Value

Profiles details from all the servers.

datashield.resources *List of the resources*

Description

Get the list of all the resources from the different data repositories.

Usage

```
datashield.resources(conns)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.

Value

Resource unique names from all the servers.

Examples

```
## Not run:
  datashield.resources(conns)

## End(Not run)
```

datashield.resource_status *Status of some resources*

Description

Get whether some identified resources are accessible in each of the data repositories.

Usage

```
datashield.resource_status(conns, resource)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.
resource	Fully qualified name of a resource in the data repository (can be a vector or must be the same in each data repository); or a named list of fully qualified resource names (one per server name); or a data frame with 'server' and 'resource' columns (such as the one that is used in datashield.login)

Value

Resource status for each server.

datashield.rm *Remove a R symbol*

Description

Remove a symbol from the current Datashield session.

Usage

```
datashield.rm(conns, symbol)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.
symbol	Name of the R symbol.

`datashield.sessions` *R/DataSHIELD remote sessions*

Description

Ensure that the remote R sessions are up and running during the analysis.

Usage

```
datashield.sessions(
  conns,
  async = TRUE,
  success = NULL,
  error = NULL,
  errors.print = getOption("datashield.errors.print", FALSE)
)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.
async	Whether the remote R/DataSHIELD session should be created asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.
success	Callback function that will be called each time an R session has been created from a connection. The expected function signature is the connection/study name. Default is NULL (no callback).
error	Callback function that will be called each time the R session creation request has failed. The expected function signature is the connection/study name and the error message. Default is NULL (no callback).
errors.print	Boolean, whether to print datashield errors in the console or return a message indicating that they can be retrieved using 'datashield.errors'.

Examples

```
## Not run:
# call sessions function on server side asynchronously
# i.e. each study connection will create a remote R session in parallel
datashield.sessions(conns)

# call sessions function with callback functions
result <- datashield.sessions(conns,
  success = function(server) {
    # do something with server's success
  },
  error = function(server, error) {
    # do something with server's error
  })
```

```
## End(Not run)
```

`datashield.symbols` *List R symbols*

Description

Get the R symbols available after the datashield.assign calls in the Datashield R session.

Usage

```
datashield.symbols(conns)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.

`datashield.tables` *List of the tables*

Description

Get the list of all the tables from the different data repositories.

Usage

```
datashield.tables(conns)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.

Value

Table unique names from all the servers.

Examples

```
## Not run:
  datashield.tables(conns)

## End(Not run)
```

datashield.table_status *Status of some tables*

Description

Get whether some identified tables are accessible in each of the data repositories.

Usage

```
datashield.table_status(conns, table)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.
table	Fully qualified name of a table in the data repository (can be a vector or must be the same in each data repository); or a named list of fully qualified table names (one per server name); or a data frame with 'server' and 'table' columns (such as the one that is used in datashield.login)

Value

Table status for each server.

datashield.workspaces *List saved DataSHIELD R workspaces*

Description

Get the list of R workspaces that were saved during a Datashield R session.

Usage

```
datashield.workspaces(conns)
```

Arguments

conns	DSConnection-class object or a list of DSConnection-classs.

`datashield.workspace_restore`
Restore saved workspace to the current DataSHIELD R session

Description

Restore the state of a previously saved DataSHIELD R session (the workspace saved with `datashield.workspace_save`) with the provided name from each data repository. Note that when restoring a workspace, any existing symbol or file with same name will be overridden.

Usage

```
datashield.workspace_restore(conns, ws)
```

Arguments

conns	`DSConnection-class` object or a list of `DSConnection-class`s.
ws	The workspace name

`datashield.workspace_rm`
Remove a DataSHIELD workspace

Description

Remove in each data repository the workspace with the provided name.

Usage

```
datashield.workspace_rm(conns, ws)
```

Arguments

conns	`DSConnection-class` object or a list of `DSConnection-class`s.
ws	The workspace name

datashield.workspace_save *Save DataSHIELD R session to a workspace*

Description

Save the current state of the DataSHIELD R session in a workspace with the provided name in each data repository. The workspace can be restored on the next `datashield.login` or with `datashield.workspace_restore`.

Usage

```
datashield.workspace_save(conns, ws)
```

Arguments

conns	`DSConnection-class` object or a list of `DSConnection-class`s.
ws	The workspace name

dsAggregate *Aggregate data*

Description

Aggregate some data from the DataSHIELD R session using a valid R expression. The aggregation expression must satisfy the data repository's DataSHIELD configuration.

Usage

```
dsAggregate(conn, expr, async = TRUE)
```

Arguments

conn	An object that inherits from `DSConnection-class`.
expr	Expression to evaluate.
async	Whether the result of the call should be retrieved asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

Value

An object of class `DSResult-class` representing the result of the aggregation operation.

See Also

Other DSConnection generics: DSConnection-class, dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsAssignTable(con, "D", "test.CNSIM")
dsAggregate(con, as.symbol("meanDS(D$WEIGHT)"))
dsDisconnect(con)

## End(Not run)
```

---

dsAssignExpr *Assign an expression result*

Description

Assign the result of the evaluation of an expression to a symbol the DataSHIELD R session The assignment expression must satisfy the data repository's DataSHIELD configuration.

Usage

```
dsAssignExpr(conn, symbol, expr, async = TRUE)
```

Arguments

conn	An object that inherits from DSConnection-class.
symbol	Name of the R symbol.
expr	A R expression with allowed assign functions calls.
async	Whether the result of the call should be retrieved asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

Value

An object of class DSResult-class representing the result of the assignment operation.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsAssignExpr(con, "C", as.symbol("c(1, 2, 3)"))
dsDisconnect(con)

## End(Not run)
```

---

dsAssignResource *Assign a resource object*

Description

Assign a resource object of class 'ResourceClient' from the data repository to a symbol in the DataSHIELD R session. The resource reference to be assigned must exist (i.e. proper permissions apply) for the DataSHIELD user.

Usage

```
dsAssignResource(conn, symbol, resource, async = TRUE)
```

Arguments

conn	An object that inherits from DSConnection-class.
symbol	Name of the R symbol.
resource	Fully qualified name of a resource reference in the data repository.
async	Whether the result of the call should be retrieved asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

Value

An object of class DSResult-class representing the result of the assignment operation.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsAssignResource(con, "D", "test.CNSIM")
dsDisconnect(con)

## End(Not run)
```

---

dsAssignTable *Assign a data table*

Description

Assign a data table from the data repository to a symbol in the DataSHIELD R session. The table to be assigned must exist (i.e. proper permissions apply) for the DataSHIELD user.

Usage

```
dsAssignTable(
  conn,
  symbol,
  table,
  variables = NULL,
  missings = FALSE,
  identifiers = NULL,
  id.name = NULL,
  async = TRUE
)
```

Arguments

conn	An object that inherits from DSConnection-class.
symbol	Name of the R symbol.
table	Fully qualified name of a table in the data repository.
variables	List of variable names or Javascript expression that selects the variables of a table. See javascript documentation: http://opaldoc.obiba.org/en/latest/magma-user-guide/variable/

missings	If TRUE, missing values will be pushed from data repository to R, default is FALSE.
identifiers	Name of the identifiers mapping to use when assigning entities to R (if supported by the data repository).
id.name	Name of the column that will contain the entity identifiers. If not specified, the identifiers will be the data frame row names. When specified this column can be used to perform joins between data frames.
async	Whether the result of the call should be retrieved asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

Value

An object of class DSResult-class representing the result of the assignment operation.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsAssignTable(con, "D", "test.CNSIM")
dsDisconnect(con)

## End(Not run)
```

---

dsConnect *Create a connection to a DataSHIELD-aware data repository*

Description

Connect to a data repository going through the appropriate authentication procedure. Some implementations may allow you to have multiple connections open, so you may invoke this function repeatedly assigning its output to different objects. The authentication mechanism is left unspecified, so check the documentation of individual drivers for details.

Usage

```
dsConnect(drv, name, restore = NULL, ...)
```

Arguments

drv	an object that inherits from DSDriver-class.
name	Name of the connection, which must be unique among all the DataSHIELD connections.
restore	Workspace name to be restored in the newly created DataSHIELD R session.
...	authentication arguments needed by the data repository instance; these typically include 'username', 'password', 'token', 'host', 'port', 'dbname', etc. For details see the appropriate 'DSDriver'.

See Also

dsDisconnect to disconnect from a data repository.

Other DSDriver generics: DSDriver-class, dsGetInfo()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
con
dsListTables(con)
dsDisconnect(con)

## End(Not run)
```

DSConnection-class *DSConnection class*

Description

This virtual class encapsulates the connection to a DataSHIELD-aware data repository, and it provides access to data assignments and aggregagtions etc.

Implementation note

Individual drivers are free to implement single or multiple simultaneous connections.

See Also

Other DS classes: DSDriver-class, DSObject-class, DSResult-class, DSSession-class

Other DSConnection generics: dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
con
dsDisconnect(con)

## End(Not run)
```

`dsDisconnect` *Disconnect (close) a connection*

Description

This closes the connection, discards all pending work, and frees resources (e.g., memory, sockets).

Usage

```
dsDisconnect(conn, save = NULL)
```

Arguments

`conn`	An object inheriting from `DSConnection-class`.
`save`	Save DataSHIELD session in data repository with provided identifier string.

See Also

Other DSConnection generics: `DSConnection-class`, `dsAggregate()`, `dsAssignExpr()`, `dsAssignResource()`, `dsAssignTable()`, `dsGetInfo()`, `dsHasResource()`, `dsHasSession()`, `dsHasTable()`, `dsIsAsync()`, `dsKeepAlive()`, `dsListMethods()`, `dsListPackages()`, `dsListProfiles()`, `dsListResources()`, `dsListSymbols()`, `dsListTables()`, `dsListWorkspaces()`, `dsRestoreWorkspace()`, `dsRmSymbol()`, `dsRmWorkspace()`, `dsSaveWorkspace()`, `dsSession()`

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsDisconnect(con)

## End(Not run)
```

DSDriver-class *DSDriver class*

Description

Base class for all DataSHIELD-aware data repositories drivers (e.g., Opal, ...). The virtual class 'DSDriver' defines the operations for creating connections.

See Also

Other DS classes: DSConnection-class, DSObject-class, DSResult-class, DSSession-class

Other DSDriver generics: dsConnect(), dsGetInfo()

dsFetch *Get the raw result*

Description

Wait for the result to be available and fetch the result from a previous assignment or aggregation operation that may have been run asynchronously, in which case it is a one-shot call. When the assignment or aggregation operation was not asynchronous, the result is wrapped in the object and can be fetched multiple times.

Usage

```
dsFetch(res)
```

Arguments

res	An object inheriting from DSResult-class.

See Also

Other DSResult generics: DSResult-class, dsGetInfo(), dsIsCompleted()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsAssignExpr(con, "C", as.symbol("c(1, 2, 3)"))
res <- dsAggregate(con, as.symbol("length(C)"))
length <- dsFetch(res)
dsDisconnect(con)

## End(Not run)
```

dsGetInfo *Get DataSHIELD-aware data repository metadata*

Description

Get DataSHIELD-aware data repository metadata

Usage

```
dsGetInfo(dsObj, ...)
```

Arguments

dsObj	An object inheriting from DSObject-class, i.e. DSDriver-class, DSConnection-class, or a DSResult-class.
...	Other arguments to methods.

Value

a named list

Implementation notes

For 'DSDriver' subclasses, this should include the version of the package ('driver.version') and the version of the underlying client library ('client.version').

For 'DSConnection' objects this should report the version of the data repository application ('repo.version') and its name ('repo.name'), the database name ('dbname'), username, ('username'), host ('host'), port ('port'), etc. It MAY also include any other arguments related to the connection (e.g., thread id, socket or TCP connection type). It MUST NOT include the password.

For 'DSResult' objects, this should include the R expression being executed (an expression object tailored by the implementation of DSI) and if the query is complete (a result object tailored by the implementation of DSI).

See Also

Other DSDriver generics: DSDriver-class, dsConnect()

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Other DSResult generics: DSResult-class, dsFetch(), dsIsCompleted()

dsHasResource *Check remote resource exists*

Description

Check if a remote resource reference exists in the data repository. Returns a logical indicating the existence of a remote resource accessible through this connection.

Usage

```
dsHasResource(conn, resource)
```

Arguments

conn	An object that inherits from DSConnection-class.
resource	the resource fully qualified name

Value

A logical indicating if the resource exists.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsHasResource(con, "test.CNSIM")
dsDisconnect(con)

## End(Not run)
```

dsHasSession *Check remote R session exists*

Description

Check if a remote R session exists (not necessarily running and ready to accept R commands submissions).

Usage

```
dsHasSession(conn)
```

Arguments

conn	An object that inherits from DSConnection-class.

Value

A logical indicating if a remote R session exists accessible through this connection.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsHasSession(con)
dsDisconnect(con)

## End(Not run)
```

dsHasTable *Check remote table exists*

Description

Check if a remote table exists in the data repository. Returns a logical indicating the existence of a remote table accessible through this connection.

Usage

```
dsHasTable(conn, table)
```

Arguments

conn	An object that inherits from DSConnection-class.
table	the table fully qualified name

Value

A logical indicating if the table exists.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsHasTable(con, "test.CNSIM")
dsDisconnect(con)

## End(Not run)
```

---

dsIsAsync *Asynchronous result support*

Description

When a DSResult-class object is returned on aggregation or assignment operation, the raw result can be accessed asynchronously, allowing parallelization of DataSHIELD calls over multpile servers. The returned named list of logicals will specify if asynchronicity is supported for: session operation ('session'), aggregation operation ('aggregate'), table assignment operation ('assignTable'), resource assignment operation ('assignResource') and expression assignment operation ('assignExpr').

Usage

```
dsIsAsync(conn)
```

Arguments

conn	An object that inherits from DSConnection-class.

Value

A named list of logicals indicating if asynchronicity is supported for session, aggregation and assignment operations.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsIsAsync(con)
dsDisconnect(con)

## End(Not run)
```

---

dsIsCompleted *Get whether the operation is completed*

Description

Get whether the result from a previous assignment or aggregation operation was completed, either with a successful status or a failed one. This call must not wait for the completion, immediate response is expected. Once the result is identified as being completed, the raw result the operation can be get directly.

Usage

```
dsIsCompleted(res)
```

Arguments

res	An object inheriting from DSResult-class.

Value

A logical

See Also

Other DSResult generics: DSResult-class, dsFetch(), dsGetInfo()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsAssignExpr(con, "C", as.symbol("c(1, 2, 3)"))
res <- dsAggregate(con, as.symbol("length(C)"), async = TRUE)
completed <- dsIsCompleted(res)
while (!completed) {
  Sys.sleep(1)
  completed <- dsIsCompleted(res)
}
length <- dsFetch(res)
dsDisconnect(con)

## End(Not run)
```

---

dsIsReady *Get whether the remote R session is up and running*

Description

Get whether the remote R session is up and running, ready to accept R commands. The primary use of this function is to know whether the session is ready after it has been created in an asynchronous way.

Usage

```
dsIsReady(session)
```

Arguments

session	An object inheriting from DSSession-class.

Value

A logical

See Also

Other DSSession generics: DSSession-class, dsStateMessage()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
session <- dsSession(con, async = TRUE)
ready <- dsIsReady(session)
while (!ready) {
  Sys.sleep(1)
  ready <- dsIsReady(session)
  cat(".")
}
dsDisconnect(con)

## End(Not run)
```

---

dsKeepAlive *Keep a connection alive*

Description

As the DataSHIELD sessions are working in parallel, this function helps at keeping idle connections alive while others are working. Any communication failure must be silently processed.

Usage

```
dsKeepAlive(conn)
```

Arguments

conn	An object inheriting from DSConnection-class.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsKeepAlive(con)
dsDisconnect(con)

## End(Not run)
```

dsListMethods *Get the DataSHIELD methods*

Description

Get the list of DataSHIELD methods that have been configured on the remote data repository.

Usage

```
dsListMethods(conn, type = "aggregate")
```

Arguments

conn	An object that inherits from DSConnection-class.
type	Type of the method: "aggregate" (default) or "assign".

Value

A data.frame with columns: name, type ('aggregate' or 'assign'), class ('function' or 'script'), value, package, version.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsListMethods(con)
dsDisconnect(con)

## End(Not run)
```

dsListPackages *Get the DataSHIELD packages*

Description

Get the list of DataSHIELD packages with their version, that have been configured on the remote data repository.

Usage

```
dsListPackages(conn)
```

Arguments

conn	An object that inherits from DSConnection-class.

Value

A data.frame with columns: name, version.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsListPackages(con)
dsDisconnect(con)

## End(Not run)
```

dsListProfiles *Get the DataSHIELD profiles*

Description

Get the list of DataSHIELD profiles that have been configured on the remote data repository.

Usage

```
dsListProfiles(conn)
```

Arguments

conn	An object that inherits from DSConnection-class.

Value

A list containing the "available" character vector of profile names and the "current" profile (in case a default one was assigned).

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsListProfiles(con)
dsDisconnect(con)

## End(Not run)
```

dsListResources *List remote resources*

Description

List remote resources from the data repository. Returns the unquoted names of remote resources accessible through this connection.

Usage

```
dsListResources(conn)
```

Arguments

conn	An object that inherits from DSConnection-class.

Value

A character vector of resource names.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsListResources(con)
dsDisconnect(con)

## End(Not run)
```

dsListSymbols *List symbols*

Description

After assignments have been performed, some symbols live in the DataSHIELD R session on the server side.

Usage

```
dsListSymbols(conn)
```

Arguments

conn	An object that inherits from DSConnection-class.

Value

A character vector of symbol names.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsAssignTable(con, "D", "test.CNSIM")
dsListSymbols(con)
dsDisconnect(con)

## End(Not run)
```

---

dsListTables *List remote tables*

Description

List remote tables from the data repository. Returns the unquoted names of remote tables accessible through this connection.

Usage

```
dsListTables(conn)
```

Arguments

conn	An object that inherits from DSConnection-class.

Value

A character vector of table names.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsListTables(con)
dsDisconnect(con)

## End(Not run)
```

---

dsListWorkspaces *Get the DataSHIELD workspaces*

Description

Get the list of DataSHIELD workspaces, that have been saved on the remote data repository.

Usage

```
dsListWorkspaces(conn)
```

Arguments

conn	An object that inherits from DSConnection-class.

Value

A data.frame with columns: name, lastAccessDate, size.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsListWorkspaces(con)
dsDisconnect(con)

## End(Not run)
```

DSLoginBuilder *DataSHIELD login details builder*

Description

DataSHIELD login details builder

DataSHIELD login details builder

Format

A R6 object of class DSLoginBuilder

Details

Helper class for creating a valid data frame that can be used to perform `datashield.login`. See also newDSLoginBuilder.

Methods

Public methods:

- `DSLoginBuilder$new()`
- `DSLoginBuilder$append()`
- `DSLoginBuilder$build()`
- `DSLoginBuilder$clone()`

Method `new()`**:** Create a new DSLoginBuilder instance.

Usage:

```
DSLoginBuilder$new(logins = NULL, .silent = FALSE)
```

Arguments:

`logins` A valid login details data frame to initiate the builder, optional.

`.silent` Do not warn user when non secure HTTP urls are encountered. Default is FALSE.

Returns: A DSLoginBuilder object.

Method `append()`**:** Append login information for a specific server.

Usage:

```
DSLoginBuilder$append(
  server,
  url,
  table = "",
  resource = "",
  driver = "OpalDriver",
  user = "",
  password = "",
  token = "",
  options = "",
  profile = ""
)
```

Arguments:

`server` The server name (must be unique).

`url` The url to connect to the server or a R symbol name.

`table` The table path that identifies the dataset in the server.

`resource` The resource path that identifies the resource reference in the server.

`driver` The `DSDriver-class` name to build the `DSConnection-class`.

`user` The user name in the user credentials.

`password` The user password in the user credentials.

`token` The personal access token (ignored when user credentials are not empty).

`options` Any options (R code to be parsed) that could be relevant for the DS connection object.

`profile` The DataSHIELD R server profile (affects the R packages available and the applied configuration). If not provided or not supported, default profile will be applied.

Method `build()`**:** Build the DSLoginBuilder instance.

Usage:

```
DSLoginBuilder$build()
```

Returns: The DataSHIELD logindata data.frame

Method `clone()`**:** The objects of this class are cloneable with this method.

Usage:

```
DSLoginBuilder$clone(deep = FALSE)
```

Arguments:

`deep` Whether to make a deep clone.

`DSObject-class` *DSObject class*

Description

Base class for all other DataSHIELD classes (e.g., drivers, connections). This is a virtual Class: No objects may be created from it.

Details

More generally, DataSHIELD defines a very small set of classes and generics that allows users and applications perform meta-analysis with a common interface. The virtual classes are 'DSDriver' that individual drivers extend, 'DSConnection' that represent instances of DataSHIELD-aware data repository connections, and 'DSResult' that represent the result of a DataSHIELD operation. These three classes extend the basic class of 'DSObject', which serves as the root or parent of the class hierarchy.

Implementation notes

An implementation MUST provide methods for the following generics:

- dsGetInfo

It MAY also provide methods for:

- summary Print a concise description of the object. The default method invokes 'dsGetInfo(dsObj)' and prints the name-value pairs one per line. Individual implementations may tailor this appropriately.

See Also

Other DS classes: DSConnection-class, DSDriver-class, DSResult-class, DSSession-class

Examples

```
## Not run:
drv <- DSOpal::Opal()
con <- dsConnect(drv,
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")

rs <- dsAssign(con, "Project.TableA")
is(drv, "DSObject")  ## True
is(con, "DSObject")  ## True
is(rs, "DSObject")   ## True

dsDisconnect(con)

## End(Not run)
```

`dsRestoreWorkspace` *Restore a saved DataSHIELD R session (a workspace) into the current DataSHIELD R session*

Description

Restore a saved DataSHIELD R session from the remote data repository. When restoring a workspace, any existing symbol or file with same name will be overridden.

Usage

```
dsRestoreWorkspace(conn, name)
```

Arguments

conn	An object that inherits from DSConnection-class.
name	Name of the workspace

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsListWorkspaces(con)
dsRestoreWorkspace(con, "foo")
dsDisconnect(con)

## End(Not run)
```

DSResult-class *DSResult class*

Description

This virtual class describes the result and state of execution of a DataSHIELD request (aggregation or assignment).

Implementation notes

Individual drivers are free to allow single or multiple active results per connection.

The default show method displays a summary of the query using other DS generics.

See Also

Other DS classes: DSConnection-class, DSDriver-class, DSObject-class, DSSession-class

Other DSResult generics: dsFetch(), dsGetInfo(), dsIsCompleted()

dsRmSymbol *Remove a symbol*

Description

After removal, the data identified by the symbol will not be accessible in the DataSHIELD R session on the server side.

Usage

```
dsRmSymbol(conn, symbol)
```

Arguments

conn	An object that inherits from DSConnection-class.
symbol	Name of the R symbol.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmWorkspace(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsAssignTable(con, "D", "test.CNSIM")
dsRmSymbol(con, "D")
dsDisconnect(con)

## End(Not run)
```

dsRmWorkspace *Remove a DataSHIELD workspace*

Description

Remove a DataSHIELD workspace from the remote data repository. Ignore if no such workspace exists.

Usage

```
dsRmWorkspace(conn, name)
```

Arguments

conn	An object that inherits from DSConnection-class.
name	Name of the workspace

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsSaveWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsSaveWorkspace(con, "foo")
dsListWorkspaces(con)
dsRmWorkspace(con, "foo")
dsListWorkspaces(con)
dsDisconnect(con)

## End(Not run)
```

---

dsSaveWorkspace *Save the DataSHIELD R session in a workspace*

Description

Save the DataSHIELD R session in a workspace on the remote data repository.

Usage

```
dsSaveWorkspace(conn, name)
```

Arguments

conn	An object that inherits from DSConnection-class.
name	Name of the workspace

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSession()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsSaveWorkspace(con, "foo")
dsListWorkspaces(con)
dsDisconnect(con)

## End(Not run)
```

`dsSession` *Create a remote R session*

Description

Create a remote R session if none exists. If a remote R session already exists, it will be reused. Returns a logical indicating if a remote R session exists accessible through this connection.

Usage

```
dsSession(conn, async = TRUE)
```

Arguments

conn	An object that inherits from DSConnection-class.
async	Whether the result of the call should be retrieved asynchronously. When TRUE (default) the calls are parallelized over the connections, when the connection supports that feature, with an extra overhead of requests.

Value

An object of class DSSession-class representing the remote R session.

See Also

Other DSConnection generics: DSConnection-class, dsAggregate(), dsAssignExpr(), dsAssignResource(), dsAssignTable(), dsDisconnect(), dsGetInfo(), dsHasResource(), dsHasSession(), dsHasTable(), dsIsAsync(), dsKeepAlive(), dsListMethods(), dsListPackages(), dsListProfiles(), dsListResources(), dsListSymbols(), dsListTables(), dsListWorkspaces(), dsRestoreWorkspace(), dsRmSymbol(), dsRmWorkspace(), dsSaveWorkspace()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
dsSession(con, async=TRUE)
dsDisconnect(con)

## End(Not run)
```

DSSession-class *DSSession class*

Description

This virtual class describes the state of the R session.

Details

The default show method displays a summary of the R session state using other DS generics.

See Also

Other DS classes: DSConnection-class, DSDriver-class, DSObject-class, DSResult-class

Other DSSession generics: dsIsReady(), dsStateMessage()

dsStateMessage *Get the state of the remote R session*

Description

Get a human-readable message that informs about the state of the remote R session. The primary use of this function is to inform the user about the session state process after it has been created in an asynchronous way.

Usage

```
dsStateMessage(session)
```

Arguments

session	An object inheriting from DSSession-class.

Value

A character string

See Also

Other DSSession generics: DSSession-class, dsIsReady()

Examples

```
## Not run:
con <- dsConnect(DSOpal::Opal(), "server1",
  username = "dsuser", password = "password", url = "https://opal-demo.obiba.org")
session <- dsSession(con, async = TRUE)
ready <- dsIsReady(session)
while (!ready) {
  Sys.sleep(1)
  ready <- dsIsReady(session)
  cat(dsStateMessage(session), "\n")
}
dsDisconnect(con)

## End(Not run)
```

`newDSLoginBuilder` *Create a new DataSHIELD login details builder*

Description

Shortcut function to create a new DSLoginBuilder instance. The data frame that is being built can be used to perform `datashield.login`.

Usage

```
newDSLoginBuilder(logins = NULL, .silent = FALSE)
```

Arguments

`logins`	A valid login details data frame to initiate the builder, optional.
`.silent`	Do not warn user when non secure HTTP urls are encountered. Default is FALSE.

Examples

```
{
  builder <- newDSLoginBuilder()
 builder$append(server="server1", url="https://opal-demo.obiba.org", table="datashield.CNSIM1",
    user="administrator", password="password")
  builder$append(server="server2", url="dslite.server", table="CNSIM2")
  builder$append(server="server3", url="http://molgenis.example.org", table="CNSIM3",
   token="123456789")
  builder$append(server="server4", url="dslite.server", table="CNSIM4")
  logindata <- builder$build()
}
```
