

Package ‘RcppGreedySetCover’

May 7, 2026

Title Greedy Set Cover

Version 0.1.1

Description A fast implementation of the greedy algorithm for the set cover problem using 'Rcpp'.

Depends R (>= 3.2.5)

greedySetCover

Greedy Set Cover

Description

Fast greedy set cover algorithm.

Usage

```
greedySetCover(X, data.table = TRUE)
```

Arguments

<code>X</code>	Two-column data.frame in long format: Column 1 identifies the sets, column 2 the elements.
<code>data.table</code>	If TRUE returns a data.table with keys given by sets and elements. If FALSE returns a data.frame, sorted by sets and elements.

Value

If `data.table == TRUE` a data.table, keyed by sets and elements. Else a data.frame, sorted by sets and elements. Column names are derived from input.

Examples

```
# Create some data.
set.seed(333)
X <- data.table::rbindlist(
  lapply(
    seq_len(1e4L),
    function(x) list(element=sample.int(n=1e3L, size=sample.int(50L, 1L)))
  ),
  idcol="set"
)
# Elements are integers 1,2,...,1000.

# Run set cover
res <- greedySetCover(X, FALSE)
head(res)

# Check if all elements are covered.
identical(sort(unique(res$element)), sort(unique(X$element)))
```
