<i>ais</i>	<i>Australian institute of sport data</i>
------------	---

Description

Data on 102 male and 100 female athletes collected at the Australian Institute of Sport.

Format

This data frame contains the following columns:

- Sex** (0 = male or 1 = female)
- Ht** height (cm)
- Wt** weight (kg)
- LBM** lean body mass
- RCC** red cell count
- WCC** white cell count
- Hc** Hematocrit
- Hg** Hemoglobin
- Ferr** plasma ferritin concentration
- BMI** body mass index, weight/(height)**2
- SSF** sum of skin folds
- Bfat** Percent body fat
- Label** Case Labels
- Sport** Sport

allshoots

Apple shoots data

Description

Bland's Apple Shoot data. allshoots includes all the data, shortshoots just the short shoot data, and longshoots includes long shoots only.

Format

This data frame contains the following columns:

Day days from dormancy

n number of shoots sampled

ybar average number of stem units

SD within-day standard deviation

Type 1 if long shoots, 0 if shortshoots.

Source

Bland, J. (1978). A comparison of certain aspects of ontogeny in the long and short shoots of McIntosh apple during one annual growth cycle. Unpublished Ph. D. dissertation, University of Minnesota, St. Paul, Minnesota.

alr4Web

Access to the Applied Linear Regression website

Description

These function will access the website for Applied Linear Regression, 3rd and 4th editions.

Usage

```
alr4Web(page = c("webpage", "errata", "primer", "solutions"))
```

Arguments

page A character string indicating what page to open. The default "webpage" will open the main webpage, "errata" displays the Errata sheet for the third edition of the book, "primer" fetches and displays the primer for R, and "solutions" gives solutions to odd-numbered problems.

Value

Either a webpage or a pdf document is displayed. This function gives quick access to the website for the book and in particular to the R primer and solutions to odd-numbered problems. The pdf files are formatted for viewing on a computer screen. With Adobe Reader, view the pdf files with the bookmarks showing at the left, using single page view which is selected by View -> Page Display -> Single Page View.

Author(s)

Sanford Weisberg, based on the function UsingR in the UsingR package by John Verzani

Examples

```
## Not run: alr4Web("primer")
```

baeskel

Surface tension

Description

The data in the file were collected in a study of the effect of dissolved sulfur on the surface tension of liquid copper (Baes and Kellogg, 1953)

Format

This data frame contains the following columns:

Sulfur Weight percent sulfur

Tension Decrease in surface tension, dynes/cm

Source

Baes, C. and Kellogg, H. (1953). Effect of dissolved sulphur on the surface tension of liquid copper. *J. Metals*, 5, 643-648.

BGSall	<i>Berkeley guidance study</i>
--------	--------------------------------

Description

Data from the Berkeley guidance study of children born in 1928-29 in Berkeley, CA. BGSall contains all the data, BGSboys the boys only, and BGSgirls the girls only.

Format

This data frame contains the following columns:

Sex 0 = males, 1 = females

WT2 Age 2 weight (kg)

HT2 Age 2 height (cm)

WT9 Age 9 weight (kg)

HT9 Age 9 height (cm)

LG9 Age 9 leg circumference (cm)

ST9 Age 9 strength (kg)

WT18 Age 18 weight (kg)

HT18 Age 18 height (cm)

LG18 Age 18 leg circumference (cm)

ST18 Age 18 strength (kg)

BMI18 Body Mass Index, $WT18 / (HT18 / 100)^2$, rounded to one decimal.

Soma Somatotype, a 1 to 7 scale of body type.

BigMac2003

World cities data

Description

Prices in many world cities from a 2003 Union Bank of Switzerland report.

Format

This data frame uses the name of the city as row names, and contains the following columns:

BigMac Minutes of labor to purchase a Big Mac

Bread Minutes of labor to purchase 1 kg of bread

Rice Minutes of labor to purchase 1 kg of rice

FoodIndex Food price index (Zurich=100)

Bus Cost in US dollars for a one-way 10 km ticket

Apt Normal rent (US dollars) of a 3 room apartment

TeachGI Primary teacher's gross income, 1000s of US dollars

TeachNI Primary teacher's net income, 1000s of US dollars

TaxRate Tax rate paid by a primary teacher

TeachHours Primary teacher's hours of work per week:

BlowBS	<i>Blowdown data, Black Spruce only</i>
--------	---

Description

Data from the Boundary Waters Canoe Area Wilderness Blowdown. The data frame Blowdown includes nine species of trees, but this file only includes black spruce, grouped by diameter.

Format

This data frame contains the following columns:

- d** Tree diameter, in cm
- died** Number of trees of this value of d that died (blowdown)
- m** number of trees of this size class measured

Source

Roy Rich

References

S. Weisberg (2014). *Applied Linear Regression*, fourth edition. New York: Wiley.

Examples

Blowdown	<i>Blowdown data</i>
----------	----------------------

Description

Data from the Boundary Waters Canoe Area Wilderness Blowdown. The data frame blowdown includes nine species of trees. The data for balsam fir, summarized by diameter class, are given in BlowBF.

Format

This data frame contains the following columns:

- d** Tree diameter, in cm
- s** Proportion of basal area killed for the four species balsam fir, cedar, paper birch and blue spruce, a measure of local severity of the storm.
- spp** Tree species, a factor with 9 levels
- y** 1 if the tree died, 0 if it survived

brains	<i>Mammal brain weights</i>
--------	-----------------------------

Description

The data provided gives the average body weight in kilograms and the average brain weight in grams for sixty-two species of mammals.

Format

This data frame uses species names as row labels and contains the following columns:

BrainWt Brain weight, grams

BodyWt Body weight, kg

 cakes

Cakes data

Description

Oehlert (2000, Example 19.3) provides data from a small experiment on baking packaged cake mixes.

Format

A data frame with 14 observations on the following 4 variables.

block a factor

X1 Baking time, minutes

X2 Baking temperature, degrees F

Y Palatability score

Source

Challeng	<i>Challenger data</i>
----------	------------------------

Description

Contains data from the performance of O-rings in 23 U.S. space shuttle flights prior to the Challenger disaster of January 20, 1986.

Format

This data frame uses dates as row names and contains the following columns:

temp Air Temp at launch (degrees F)

pres Leak check pressure

fail Number of O-rings that failed

n 6, number of O-rings in launch

erosion Number of erosion incidents

blowby Number of blowby incidents

damage Total Damage Index

Source

cloud	<i>Florida area cumulus experiment, FACE I.</i>
-------	---

Description

The data summarize the results of the first Florida Area Cumulus Experiment, or FACE-1, designed to study the effectiveness of cloud seeding to increase rainfall in a target area (Woodley, Simpson, Biondini, and Berkley, 1977).

Format

This data frame contains the following columns:

A Action, 1=seed, 0=do not seed

D Day after June 16, 1975

S Suitability for seeding

C percent cloud cover in experimental area, measured using radar in Coral Gables, Florida

P $10^7 m^3$ prewetness

E echo motion category, either 1 or 2, a measure for type of cloud

Rain $10^7 m^3$ in target area

Source

Woodley, W.L., Simpson, J., Biondini, R., and Berkley, J. (1977). Rainfall results 1970-75: Florida area cumulus experiment. *Science*, 195, 735-742.

domedata	<i>Metrodome fan experiment</i>
----------	---------------------------------

Description

These files give the results of two experiments to see if manipulating the air conditioning fans in the Minneapolis metrodome can effect the distance travelled by a baseball. The data in domedata were collected in April 2003. The experiment was repeated in May 2003 and domedata1 gives the combined data from the two experiments.

Format

A data frame with 96 observations on the following 7 variables.

Date a factor with levels March- May

Cond a factor with levels Headwind, Tailwind

Angle the actual angle

Velocity in feet per second

BallWt weight of ball in grams

BallDia diameter of ball in inches

Dist distance in feet of the flight of the ball

Source

Donner

Donner party

Description

The Donner Party was the most famous tragedy in the history of the westward migration in the United States. In the winter of 1846-47, about ninety wagon train emigrants were unable to cross the Sierra Nevada Mountains of California before winter, and almost one-half starved to death. Perhaps because they were ordinary people – farmers, merchants, parents, children. These data include some information about each of the members of the party from Johnson (1996).

Format

This data frame uses the person's name as row labels and contains the following columns:

age Approximate age in 1846

y died or survived, a factor

sex Male or Female

family.name Either a family name, hired or single

status A factor with levels Family, Single or Hired

Source

Johnson, K. (1996). *Unfortunate Emigrants: Narratives of the Donner Party*. Logan, UT: Utah State University Press, <http://www.metrogourmet.com/crossroads/KJhome.htm>.

 Downer

Downer data

Description

For unknown reasons, some dairy cows become recumbant—they lay down. This condition can be serious, and may lead to death of the cow. These data are from a study of blood samples of over 500 cows studied at the Ruakura (N.Z.) Animal Health Laboratory during 1983-84. A variety of blood tests were performed, and for many of the animals the outcome (survived, died, or animal was killed) was determined. The goal is to see if survival can be predicted from the blood measurements. Case numbers 12607 and 11630 were noted as having exceptional care—and they survived.

Format

This data frame contains the following columns:

calving a factor with levels before and after

daysrec Days recumbent

ck Serum creatine phosphokinase (U/l at 30C)

ast serum asparate amino transferase (U/l at 30C)

urea serum urea (mmol/l)

pcv Packed Cell Volume (Haemactocrit),

inflamat inflammation 0=no, 1=yes

myopathy Muscle disorder, a factor with levels present, and absent

outcome a factor with levels died and survived

Source

Clark, R. G., Henderson, H. V., Hoggard, G. K. Ellison, R. S. and Young, B. J. (1987). The ability of biochemical and haematological tests to predict recovery in periparturient recumbent cows. *NZ Veterinary Journal*, 35, 126-133.

drugcost	<i>Drug cost.</i>
----------	-------------------

Description

These data are to try to understand the effect of health plan characteristics on drug costs. Health plans vary in size, given as member months. Some plans use generic drugs more than others. All differ on copayments. Some have strong restrictions on which drugs can be dispensed value of RI=0 means that all drugs are dispensed, RI=100 means that only one per category is available. The goal is to determine the terms that are related to cost, and in particular to understand the role of GS and RI in determining cost.

Format

This data frame uses a short code name for the drug plan as row labels and contains the following columns:

COST Ave. cost to plan for 1 prescription for 1 day

RXPM Number of prescriptions per member per year

GS Percent generic substitution, number between 0 (no substitution) to 100 (always use generic substitute)

RI Restrictiveness index (0=none, 100=total)

COPAY Average Rx copayment

AGE Average age of member

F Percent female members

MM Member months, a measure of the size of the plan

Source

dwaste	<i>Crock data.</i>
--------	--------------------

Description

An experiment was conducted to study the *O2UP*, oxygen uptake in milligrams of oxygen per minute, given five chemical measurements: biological oxygen demand (BOD), total Kjeldahl nitrogen (TKN), total solids (TS), total vital solids (TVS), which is a component of TS, and chemical oxygen demand (COD), each measured in milligrams per liter (Moore, 1975).

Format

This data frame contains the following columns:

Day Day number

BOD Biological oxygen demand

TKN Total Kjeldahl nitrogen

TS Total Solids

TVS Total volatile solids

COD Chemical oxygen demand

O2UP Oxygen uptake

Source

 Forbes

Forbes' data

Description

The data consists of 17 pairs of numbers corresponding to observed boiling point and corrected barometric pressure, at locations in the Alps.

Format

This data frame contains three columns. The first two columns are identical to the data set named forbes in the MASS package.

bp Adjusted boiling point of water in degrees F.

pres Atmospheric pressure, in inches of Mercury

lpres 100 times $\log_{10}(\text{pres})$, rounded to two decimals

fuel2001	<i>Fuel consumption</i>
----------	-------------------------

Description

Data on motor fuel consumption and related variables, for the year 2001. The unit is a state in the United States or the District of Columbia. Data are for 2001, unless noted.

Format

This data frame contains the following columns. Row labels are the two-digit US Postal abbreviations for the US states.

Drivers Number of Licensed drivers in the state

FuelC Gasoline sold for road use (1000s of gal.)

Income Per capita personal income (year 2000)

Miles Miles of Federal-aid highway miles in the state

MPC Estimated miles driven per capita

Pop Population age 16 and over

Tax Gasoline state tax rate, cents per gallon

```

galapagos

Galapagos species data

Description

Johnson and Raven (1973) have presented data giving the number of species and related variables for 29 different islands in the Galapagos Archipelago.

Format

This data frame uses the island name as row labels and contains the following columns:

NS Number of Species

ES Number of endemic species (occur only on that island)

Area Surface area of island, hectares

Anear Area of closest island, hectares

Dist Distance to closest island, km

DistSC Distance from Santa Cruz Island, km

Elevation Elevation in m, missing values given as zero

EM 1 if elevation is observed, 0 if missing

galtonpeas

Galton's peas

Description

In a paper presented to the Royal Institute on February 9, 1877, Sir Francis Galton discussed his experiments on sweet peas in which he compared the sweet peas produced by parent plants to those produced by offspring plants. In these experiments he could observe inheritance from one generation to the next. Galton categorized the parent plants according to the typical diameter of the peas they produced.

Format

This data frame contains the following columns:

Parent mean diameter of parent

Progeny mean diameter of offspring

SD offspring standard deviation

Source

Pearson, K. (1930). *Life and Letters and Labours of Francis Galton*, Vol IIIa. Cambridge: Cambridge University Press.

References

Heights

Pearson-Lee data

Description

Karl Pearson organized the collection of data on over 1100 families in England in the period 1893 to 1898. This particular data set gives the Heights in inches of mothers and their daughters, with up to two daughters per mother. All daughters are at least age 18, and all mothers are younger than 65. Data were given in the source as a frequency table to the nearest inch. Rounding error has been added to remove discreteness from graph.

Format

This data frame contains the following columns:

mheight Mother's ht, in.

dheight Daughter's ht, in.

Source

K. Pearson and A. Lee (1903), On the laws of inheritance in man, *Biometrika*, 2, 357–463, Table 31.

References

Weisberg, S. (2014). *Applied Linear Regression*, 4th edition. Hoboken NJ: Wiley.

Examples

head(Heights)
```

Highway

Highway accidents

Description

The data comes from a unpublished master's paper by Carl Hoffstedt. They relate the automobile accident rate, in accidents per million vehicle miles to several potential terms. The data include 39 sections of large Highways in the state of Minnesota in 1973. The goal of this analysis was to understand the impact of design variables, acpts, slim, Sig, and shld that are under the control of the Highway department, on accidents.

Format

This data frame contains the following columns:

adt average daily traffic count in thousands

trks truck volume as a percent of the total volume

lane total number of lanes of traffic

acpt number of access points per mile

sigs number of signalized interchanges per mile

itg number of freeway-type interchanges per mile

slim speed limit in 1973

len length of the Highway segment in miles

lwid lane width, in feet

shld width in feet of outer shoulder on the roadway

htype An indicator of the type of roadway or the source of funding for the road; "mc" for major collector, "fai" for Federal interstate highways, "pa" for principal arterial highway, and "ma" for major arterial highways

rate 1973 accident rate per million vehicle miles

Source

Carl Hoffstedt

Hooker

Hooker's data

Description

In his original paper, Forbes provided additional data collected by the botanist Dr. Joseph Hooker on temperatures and boiling points measured often at higher altitudes in the Himalaya Mountains.

Format

This data frame contains the following columns:

bp Measured boiling temperature, degrees F.

pres Measured air pressure, inches of Mercury.

lpres 100 times pres rounded to two decimals.

Source

Forbes, J. (1957). Further experiments and remarks on the measurement of heights by boiling point of water. *Transactions of the Royal Society of Edinburgh*, 21, 235-243.

jevons

Jevon's gold coin data

Description

In a study of coinage, W. Stanley Jevons weighed 274 gold sovereigns that he had collected from circulation in Manchester, England. For each coin, he recorded the weight, after cleaning, to the nearest .001 gram, and the date of issue. The age classes are coded 1 to 5, roughly corresponding to the age of the coin in decades. The standard weight of a gold sovereign was suppose to be 7.9876 grams; minimum legal weight was 7.9379 grams.

Format

This data frame contains the following columns:

Age Age of coins, decades

n Number of coins

Weight Average weight, grams

SD Standard deviation.

Min Minimum weight

Max Maximum weight

Source

Stephen Stigler

lakemary*Lake Mary bluegills*

Description

78 bluegills were captured from Lake Mary, Minnesota. On each fish, a key scale was removed. The age of a fish is determined by counting the number of annular rings on the scale. The goal is to relate length at capture to the radius of the scale.

Format

This data frame contains the following columns:

Age Years

Length mm

Source

Collected by Richard Frie, and discussed in S. Weisberg (1986), A linear model approach to the backcalculation of fish length, *J. Amer. Statist. Assoc.*, 81, 922-929.

lakes

Lake zooplankton diversity

Description

These data give the number of known crustacean zooplankton species for 69 world lakes. Also included are a number of characteristics of each lake. There are missing values.

Format

This data frame uses lake name as row label and contains the following columns:

Species Number of zooplankton species

MaxDepth Maximum lake depth, m

MeanDepth Mean lake depth, m

Cond Specific conductance, micro Siemens

Elev Elevation, m

Lat N latitude, degrees

Long W longitude, degrees

Dist distance to nearest lake, km

NLakes number of lakes within 20 km

Photo Rate of photosynthesis, mostly by the ¹⁴C method

Area Lake area, in hectares

MinnLand

Conservation restrictions and farm prices in Minnesota

Description

These data include nearly every farm sale in 6 economic regions in Minnesota from 2002-2011 that either has land enrolled in the federal Conservation Reserve Program, or CRP, or has no restrictions. A few sales with non-crp land easements were excluded. CRP enrollment is for a fixed period during which farmers agree not to grow crops for a fixed payment. This can effect sale price of land since buyers have fewer choices on use of land that could lower values, but also have guaranteed income for a fixed period that could raise values.

Usage

```
data(MinnLand)
```

Format

A data frame with 18700 observations on the following 10 variables.

`acrePrice` sale price in dollars per acre. Sale prices were adjusted to a common date within the year. No inflation adjustment is made between years.

`region` a factor with levels giving the geographic names of six economic regions of Minnesota. Excluded economic regions had few farm sales.

`improvements` percentage of property value due to improvements. Minnesota assessors estimate values separately for land and buildings. This variable is the ratio of the building value to the total value.

`year` year of sale, as a continuous variable, not as a factor. Most uses of this variable would require converting it to a factor.

`acres` size of the farm in acres

`tillable` percentage of farm acreage that is rated arable by the assessor

`financing` a factor with levels `title transfer` and `seller finance`

`crpPct` the percentage of all farm acres enrolled in CRP

`productivity` average agronomic productivity scaled 1 to 100, with larger numbers for more productive land. This score is based on University of Minnesota soil studies. This value is frequently missing because some counties never had the study done, and some county assessors are inconsistent in including this value in the record of the sale.

Details

Data is collected from Minnesota counties. Some counties do not include the productivity value in sales records, accounting for most of the missing values. The variable `tillable` is also frequently missing.

pipeline

Alaska pipeline

Description

The Alaska pipeline data consists of in-field ultrasonic measurements of the depths of defects in the Alaska pipeline. The depth of the defects were then re-measured in the laboratory. These measurements were performed in six different batches. The data were analyzed to calibrate the bias of the field measurements relative to the laboratory measurements. In this analysis, the field measurement is the response variable and the laboratory measurement is the predictor variable.

These data were originally provided by Harry Berger, who was at the time a scientist for the Office of the Director of the Institute of Materials Research (now the Materials Science and Engineering Laboratory) of NIST. These data were used for a study conducted for the Materials Transportation Bureau of the U.S. Department of Transportation.

Format

This data frame contains the following columns:

Field Number of defects measured in the field.

Lab Number of defects measured in the field.

prodscore

Soil productivity

Description

Soil productivity scores for farms in townships in four counties in the Minneapolis St. Paul metropolitan area, 1981-82. The goal is to see if the productivity score is a good predictor of the assessed value of the farmland. If so, then productivity score could be used to set assessed value for farms enrolled in the “green acres” program that requires that urban farmland be taxed at its agricultural value only without regard to development potential.

Format

This data frame contains the following columns:

County Name of the county

Value Assessed value in dollars per acre.

P Productivity score, a number between 1 and 100.

Year Tax year, either 1981 or 1982.

Rateprof

Professor ratings from RateMyProfessors.com.

Description

These data includes the summaries of the ratings of 364 instructors at one large campus in the Midwest from Bleske-Rechek and Fritsch (2011). Each instructor included in the data had at least 10 ratings over a several year period. Students provided ratings on 5 point scales. The data file provides the averages ratings and additional characteristics of the instructors

Format

A data frame with 364 observations on the following 17 variables.

gender instructor gender, a factor with levels female male

numYears a numeric vector, number of years in which this instructor had ratings between 1999 and 2009.

numRaters number of ratings

numCourses number of different course titles included in the rating for this instructor

pepper a factor with levels no and yes. In addition to rating for quality, instructors are rated as attractive or not. A value of yes means that the consensus is that the instructor is attractive.

discipline a factor with levels Hum for humanities, SocSci for social sciences, STEM for science, technology, engineering and mathematics and Pre-prof for professional training

dept a factor with department names Accounting, Anthropology, Art, Art and design, Art History, Astronomy/Physics, Biology, Business, Chemistry, Communication, Communication Disorders, Computer Science, Criminal Justice, Curriculum and Instruction, Dance, Economics, English, Environmental Public Health, Finance, FLTR, French, Geography, Geology, German, History, Information Systems, Japanese, Kins, Library Science, Management, Managerial Science, Marketing, Math, Music, Nursing, Philosophy, Physics, Physics & Astronomy, Physics and Astronomy, Political Science, Psychology, Religious Studies, Social Work, Sociology, Spanish, Special Education, Theater, Womens Studies,

quality Average quality rating, between 1, worst, to 5, best

helpfulness Average helpfulness rating, between 1, worst, to 5, best

clarity Average clarity rating, between 1, worst, to 5, best

easiness Average easiness rating, between 1, worst, to 5, best

Stevens

Subjective scaling data collected by S. S. Stevens

Description

This experiment was apparently done by S. S. Stevens and colleagues in March 1962, although the exact reference is lost. 10 subjects were played tones at each of 5 loudnesses, presumably in random order. Subjects were asked to draw a line on paper whose length matched the loudness of the tone. Each subject repeated each loudness 3 times, for a total of 30 trials per subject. The original data are lost; reported here is the mean of the 3 log-lengths for each loudness, the sd of the three log-lengths, and the number of replications, which is always 3.

Usage

```
data(Stevens)
```

Format

A data frame with 50 observations on the following 5 variables.

`subject` a factor with unique values for each subject

`loudness` either 50, 60, 70, 80 or 90 db. Decibels are a logarithmic scale

`y` a numeric vector giving the mean of the log-lengths of three lines drawn. Exponentiating these values would give the geometric mean of the three lengths in cm.

`sd` a numeric vector, giving the sd of the three log lengths

`n` a numeric vector, equal to the constant value 3

Details

This is a classic example of a psychophysics experiment pioneered by S. S. Stevens. The basic idea is that the psychological response y to a physical stimulus x should be proportional to x to a power. Since both the response and the loudness are already in log-scale, linear fits should be expected.

Source

These data were obtained in the early 1970s from the data library in the Harvard University Statistics Department.

region region of the world

group a factor with levels oecd for countries that are members of the OECD, the Organization for Economic Co-operation and Development, as of May 2012, africa for countries on the African continent, and other for all other countries. No OECD countries are located in Africa

fertility number of children per woman

ppgdp Per capita gross domestic product in US dollars

lifeExpF Female life expectancy, years

pctUrban Percent Urban

Details

Similar data, from the period 2000-2003, appears in the `alr3` package under the name `UN3`.

Source

All data were collected from UN statistical tables in 2012.

 walleye

Walleye length at age

Description

These data give length and age for over 3000 walleye (a type of fish) captured in Butternut Lake, Wisconsin, in three periods with different management method in place.

Format

A data frame with 3198 observations on the following 3 variables.

age Age of the fish, years

length Length, mm

period 1 = pre 1990, 2 = 1991-1996, 3=1997-2000

Source

Michelle LeBeau

Examples

```
head(walleye)
```

 water

California water

Description

Can Southern California's water supply in future years be predicted from past data? One factor affecting water availability is stream runoff. If runoff could be predicted, engineers, planners and policy makers could do their jobs more efficiently. Multiple linear regression models have been used in this regard. This dataset contains 43 years worth of precipitation measurements taken at six sites in the Owens Valley (labeled APMAM, APSAB, APSLAKE, OPBPC, OPRC, and OPSLAKE), and stream runoff volume at a site near Bishop, California.

Format

This data frame contains the following columns:

Year collection year

APMAM Snowfall in inches measurement site

APSAB Snowfall in inches measurement site

APSLAKE Snowfall in inches measurement site

OPBPC Snowfall in inches measurement site

OPRC Snowfall in inches measurement site

OPSLAKE Snowfall in inches measurement site

BSAAM Stream runoff near Bishop, CA, in acre-feet

wblake

West Bearskin Lake small mouth bass data.

Description

Data on samples of small mouth bass collected in West Bearskin Lake, Minnesota, in 1991. The file wblake includes only fish of ages 8 or younger.

Format

This data frame contains the following columns:

Age Age at capture (yrs)

Length Length at capture (mm)

Scale radius of a key scale, mm

Source

Minnesota Department of Natural Resources

Examples

```
head(wblake) # excludes fish age 9 or older
```

Whitestar

Titanic Survivors

Description

For each person on board the fatal maiden voyage of the ocean liner Titanic, this dataset records sex, age (adult/child), economic status (first/second/third class, or crew) and whether or not that person survived. The name of the company that owned the Titanic was White Star. Several versions of these data exist in the R universe.

Format

This data frame contains the following columns:

surv Number of survivors

m survivors + deaths

class Crew or passenger class

age adult or child

sex male or female

Source

wm1	<i>Simple windmill data</i>
-----	-----------------------------

Description

Windspeed data collected at a test site for a windmill, and also at a nearby long-term weather site, in Northern South Dakota. Data collected every six hours for all of 2002, except that all of the month of May and a few other observations are missing.

Format

A data frame with 1116 observations on the following 3 variables.

Date A text variable with values like "2002/1/2/6" meaning the reading at 6AM on January 2, 2002

CSpd Windspeed in m/s at the candidate site

RSpd Windspeed for the reference site

Source

Mark Ahlstrom and Rolf Miller, WindLogics, Inc.

Examples

```
head(wm1)
```

wm2	<i>Windmill data with direction information</i>
-----	---

Description

Windspeed data collected at a test site for a windmill, and also at a nearby long-term weather site, in Northern South Dakota. Data collected every six hours for all of 2002, except that all of the month of May and a few other observations missing.

Format

A data frame with 1116 observations on the following 5 variables.

Date A text variable with values like "2002/1/2/6" meaning the reading at 6AM on January 2, 2002

CSpd Windspeed in m/s at the candidate site

RSpd Windspeed for the reference site

RDir Wind direction, in degrees, at the reference site

Bin Wind direction binned into 16 equal width bins
