--------------	----------

encoding_data	<i>encoding_data</i>
---------------	----------------------

Description

this function returns a data frame where character columns are encoded as UTF-8. it is a helper function in `get_data_from_bursa`

Usage

```
encoding_data(data)
```

Arguments

`data` A data frame obtained from `get_data_from_bursa`

Value

No return value, used for encoding the data frame

get_data_from_bursa	<i>get_data_from_bursa</i>
---------------------	----------------------------

Description

Given a data name, this function returns the data frame

Usage

```
get_data_from_bursa(data_name)
```

Arguments

`data_name` A data set name obtained from `list_data_names()`

Value

A data frame that shows the observations for given data name

Examples

```
#NOT RUN

# It is just an example.
get_data_from_bursa("genclik-tesis")
```

list_data_names	<i>list_data_names</i>
-----------------	------------------------

Description

list the name of the data sets available in Bursa Open Data Portal

Usage

```
list_data_names()
```

Value

A character vector that shows the name of the data set

Examples

```
list_data_names()
```

search_data_by_keyword	<i>search_data_by_keyword</i>
------------------------	-------------------------------

Description

Given a key word, this function returns the dataset names including key word

Usage

```
search_data_by_keyword(key_word)
```

Arguments

key_word A data set name which is a character object

Value

A character vector object that shows the name of the datasets including key word

Examples

```
search_data_by_keyword("covid")
```
