

Package ‘codewhere’

May 8, 2026

Type Package

Title Find the Location of an R Package's Code

Version 0.1.1

Description Find the location of the code for an R package based on the package's name or string representation. Checks on 'CRAN' based on information in the 'URL' field or 'BioConductor' and 'GitHub' based on constructing a URL, and verifies all paths via testing for a successful response. This can be useful when automating static code analysis based on a list of package names, and similar tasks.
