

# Package ‘ggPMX’

May 8, 2026

**Title** 'ggplot2' Based Tool to Facilitate Diagnostic Plots for NLME Models

**Description** At Novartis, we aimed at standardizing the set of diagnostic plots used for modeling activities in order to reduce the overall effort required for generating such plots. For this, we developed a guidance that proposes an adequate set of diagnostics and a toolbox, called 'ggPMX' to execute them. 'ggPMX' is a toolbox that can generate all diagnostic plots at a quality sufficient for publication and submissions using few lines of code. This package focuses on plots recommended by ISoP

<[doi:10.1002/psp4.12161](https://doi.org/10.1002/psp4.12161)>. While not required, you can get/install the 'R' 'lixoftConnectors' package in the 'Monolix' installation, as described at the following url <<https://monolixsuite.slp-software.com/r-functions/2024R1/installation-and-initialization>>.

When 'lixoftConnectors' is available, 'R' can use 'Monolix' directly to create the required Chart Data instead of exporting it from the 'Monolix' gui.

**Version** 1.3.2

**URL** <https://github.com/ggPMXdevelopment/ggPMX>

**BugReports** <https://github.com/ggPMXdevelopment/ggPMX/issues>

**Depends** R (>= 3.5)

**Imports** data.table, yaml, R6, gtable, ggplot2 (>= 3.4.0), ggforce, magrittr, stringr, assertthat, GGally, zoo, knitr, rmarkdown, tidy, dplyr, purrr, readr, rlang, checkmate, scales

**License** GPL-2

**Suggests** testthat, xtable, vdiff, rxode2, nlmixr2est, nlmixr2data, nlme, lixoftConnectors, xgxr, withr, lifecycle

**VignetteBuilder** knitr

**NeedsCompilation** no

**RoxygenNote** 7.3.2

**Encoding** UTF-8

---

abbrev	<i>Give the whole abbreviation definition</i>
--------	---

---

**Description**

Give the whole abbreviation definition

**Usage**

abbrev(param)

**Arguments**

param            abbreviation term

**Value**

character abbreviation definition

**Examples**

```
abbrev("VPC")
```

---

add_draft	<i>Add draft layer annotation</i>
-----------	-----------------------------------

---

**Description**

This function adds the word draft to certain graphics.

**Usage**

```
add_draft(
  label = "DRAFT",
  size = 10,
  colour = "grey50",
  x = Inf,
  y = -Inf,
  ...
)
```

**Arguments**

label            draft layer default to DRAFT  
size             size of the annotation  
colour          color of the annotation default to grey50  
x                numeric x coordinate of the draft label  
y                numeric y coordinate of the draft label  
...              extra parameters to geom text used to annotate the draft

**Value**

ggplot2 annotation

---

check_shrink	<i>Performs checks of names in shrink list</i>
--------------	--

---

**Description**

Performs checks of names in shrink list

**Usage**

```
check_shrink(shrink_list)
```

**Arguments**

shrink_list	list list of shrink arguments
-------------	-------------------------------

---

distrib	<i>creates a graphic distribution object</i>
---------	--

---

**Description**

creates a graphic distribution object

**Usage**

```
distrib(
  labels,
  is.shrink,
  type = c("box", "hist"),
  is.jitter = FALSE,
  jitter = NULL,
  facets = NULL,
  histogram = NULL,
  shrink = NULL,
  dname = NULL,
  ...
)
```

**Arguments**

labels	list of texts/titles used within the plot
is.shrink	logical if TRUE add shrinkage layer
type	box for boxplot or histogram
is.jitter	logical if TRUE add jitter operator for points
jitter	list set jitter parameter

facets	list set the facet setting in case of histogram plot
histogram	list histogram graphical parameters
shrink	pmxShrinkClass shrinkage graphical parameter or list coercible into one
dname	name of dataset to be used
...	others graphics arguments passed to <a href="#">pmx_gpar</a> internal object.

## Details

**labels** is a list that contains:

- **title:** plot title default "EBE distribution"
- **subtitle:** plot subtitle default empty
- **x:** x axis label default to "Etas"
- **y:** y axis label default to empty
- **legend:** legend title default to "random Effect"

**shrink** is a list that contains:

- **fun:** shrinkage function can be sd or var
- **size:** shrinkage text size
- **color:** shrinkage text color
- **vjust:** shrinkage position vertical adjustment

## Value

distrib object

## See Also

Other plot\_pmx: [eta\\_cov\(\)](#), [eta\\_pairs\(\)](#), [individual\(\)](#), [plot\\_pmx\(\)](#), [plot\\_pmx.distrib\(\)](#), [plot\\_pmx.eta\\_cov\(\)](#), [plot\\_pmx.eta\\_pairs\(\)](#), [plot\\_pmx.individual\(\)](#), [plot\\_pmx.pmx\\_dens\(\)](#), [plot\\_pmx.pmx\\_gpar\(\)](#), [plot\\_pmx.pmx\\_param\\_history\(\)](#), [plot\\_pmx.pmx\\_qq\(\)](#), [plot\\_pmx.residual\(\)](#)

---

eta\_cov

*This creates an ETA covariance matrix which can be used to define the co-relation between the parameters and its shrinkage..*

---

## Description

This creates an ETA covariance matrix which can be used to define the co-relation between the parameters and its shrinkage..

**Usage**

```
eta_cov(
  labels,
  type = c("cats", "conts"),
  dname = NULL,
  show.correl = TRUE,
  correl = NULL,
  facets = NULL,
  point = NULL,
  covariates = NULL,
  is.strat.color = FALSE,
  ...
)
```

**Arguments**

labels	list of texts/titles used within the plot
type	box for cats or conts
dname	name of dataset to be used
show.correl	logical if TRUE add correlation to the plot
correl	list correl geom text graphical parameter
facets	list faceting graphical parameter
point	list geom point graphical parameter
covariates	pmxCOVObject <a href="#">pmx_cov</a>
is.strat.color	logical if 'TRUE' use a different color for the spline stratification.
...	others graphics arguments passed to <a href="#">pmx_gpar</a> internal object.

**Details**

**labels** is a list that contains:

- **title:** plot title default "EBE vs. covariates"
- **x:** x axis label default to "Etas"
- **y:** y axis label default to empty

**Value**

eta\_cov object

**See Also**

Other plot\_pmx: [distrib\(\)](#), [eta\\_pairs\(\)](#), [individual\(\)](#), [plot\\_pmx\(\)](#), [plot\\_pmx.distrib\(\)](#), [plot\\_pmx.eta\\_cov\(\)](#), [plot\\_pmx.eta\\_pairs\(\)](#), [plot\\_pmx.individual\(\)](#), [plot\\_pmx.pmx\\_dens\(\)](#), [plot\\_pmx.pmx\\_gpar\(\)](#), [plot\\_pmx.pmx\\_param\\_history\(\)](#), [plot\\_pmx.pmx\\_qq\(\)](#), [plot\\_pmx.residual\(\)](#)

---

eta_cov_plot	<i>Eta Covariates plots</i>
--------------	-----------------------------

---

**Description**

Eta Covariates plots  
Relationships between (ETA) and categorical covariates  
Relationships between (ETA) and continuous covariates

**Usage**

```
dummy(  
  dname,  
  show.correl,  
  correl,  
  point,  
  facets,  
  covariates,  
  filter,  
  strat.facet,  
  strat.color,  
  trans,  
  pmxgpar,  
  labels,  
  axis.title,  
  axis.text,  
  ranges,  
  is.smooth,  
  smooth,  
  is.band,  
  band,  
  is.draft,  
  draft,  
  is.identity_line,  
  identity_line,  
  scale_x_log10,  
  scale_y_log10,  
  color.scales  
)  
  
pmx_plot_eta_cats(ctr, ...)  
  
pmx_plot_eta_conts(ctr, ...)
```

**Arguments**

dname            character name of dataset to be used

show.correl	logical if TRUE add correlation to the plot
correl	list correl geom text graphical parameter
point	list geom point graphical parameter
facets	list facetting graphical parameter
covariates	list of selected covariates and custom labels, e.g. <code>pmx_cov(values = list("SEX"), labels = list("Sex"))</code> list <code>pmxCOVObject</code> <a href="#">pmx_cov</a>
<b>pmx_update parameters</b>	
filter	expression filter which will be applied to plotting data.
strat.facet	formula optional stratification parameter by facetting. This split plot by strats(each strat in a facet)
strat.color	character optional stratification parameter by grouping. This will split the plot by group (color) of strat.
trans	character define the transformation to apply on x or y or both variables
pmxgpar	a object of class <code>pmx_gpar</code> possibly the output of the <b>pmx_gpar: Shared basic graphics parameters</b>
labels	list list containing plot and/or axis labels: title, subtitle, x , y
axis.title	list containing <code>element_text</code> attributes to customize the axis title. (similar to <code>ggplot2</code> <code>axis.title</code> theme)
axis.text	list containing <code>element_text</code> attributes to customize the axis text (similar to <code>ggplot2</code> <code>axis.text</code> theme)
ranges	list limits of x/y ranges
is.smooth	logical if set to TRUE add smooth layer
smooth	list <code>geom_smooth</code> graphical/smoothing fun parameters
is.band	logical if TRUE add horizontal band
band	list horizontal band parameters. <code>geom_hline</code> graphical parameters.
is.draft	logical if TRUE add draft layer
draft	list draft layer parameters. <code>geom_text</code> graphical parameters.
is.identity_line	logical if TRUE add an identity line
identity_line	list <code>geom_abline</code> graphical parameters.
scale_x_log10	logical if TRUE use log10 scale for x axis.
scale_y_log10	logical if TRUE use log10 scale for y axis.
color.scales	list define scales parameter in case of <code>strat.color</code> <a href="#">pmx_settings</a>
ctr	pmx controller
...	others graphics parameters passed : <ul style="list-style-type: none"> <li>• <a href="#">pmx_gpar</a> internal function to customize shared graphical parameters</li> <li>• <a href="#">eta_cov</a> generic object for eta/covariates plots.</li> <li>• <a href="#">pmx_update</a> function.</li> </ul>
<b>eta_cov parameters</b>	

**Value**

ggplot2 object

ggplot2 object

ggplot2 object

**Examples**

```
# basic use -----
ctr <- theophylline()
ctr %>% pmx_plot_eta_cats
ctr %>% pmx_plot_eta_conts

# update graphical parameter -----

## plot selected covariates
ctr %>% pmx_plot_eta_cats(
  covariates = pmx_cov(values = list("SEX"))
)

## update labels
ctr %>% pmx_plot_eta_cats(
  labels = list(title = "New eta cats title")
)

## remove draft
ctr %>% pmx_plot_eta_cats(is.draft = FALSE)

## change text color line
ctr %>% pmx_plot_eta_conts(
  correl=list(colour="magenta")
)

## set covariates custom labels

ctr %>% pmx_plot_eta_conts(
  covariates=pmx_cov(values=list("WT0", "AGE0"),
    labels=list("Weight", "Age"))
)

## set effects and covaraites custom labels

ctr <- theophylline( settings = pmx_settings(
  effects=list( levels=c("ka", "V", "Cl"),
    labels=c("Concentration", "Volume", "Clearance")
  )
)
```

```
)  
ctr %>% pmx_plot_eta_confs(  
  covariates=pmx_cov(values=list("WT0", "AGE0"),  
    labels=list("Weight", "Age"))  
)
```

---

eta\_distribution\_plot *Eta distribution plots*

---

### Description

Eta distribution plots

Eta Distribution boxplot

Eta Distribution histogram plot

### Usage

```
eta_distribution_plot(  
  jitter,  
  type,  
  dname,  
  is.shrink,  
  shrink,  
  is.jitter,  
  histogram,  
  filter,  
  strat.facet,  
  facets,  
  strat.color,  
  trans,  
  pmxgpar,  
  labels,  
  axis.title,  
  axis.text,  
  ranges,  
  is.smooth,  
  smooth,  
  is.band,  
  band,  
  is.draft,  
  draft,  
  is.identity_line,
```

```

    identity_line,
    scale_x_log10,
    scale_y_log10,
    color.scales,
    ...
)

pmx_plot_eta_box(ctr, ...)

pmx_plot_eta_hist(ctr, ...)

```

### Arguments

jitter	list set jitter parameter
type	box for boxplot or histogram
dname	name of dataset to be used
is.shrink	logical if TRUE add shrinkage layer
shrink	list parameters to control shrinkage, must contain "fun"
is.jitter	logical if TRUE add jitter operator for points
histogram	list histogram graphical parameters
<b>pmx_update parameters</b>	
filter	expression filter which will be applied to plotting data.
strat.facet	formula optional stratification parameter by facetting. This split plot by strats(each strat in a facet)
facets	list facet_wrap parameters.
strat.color	character optional stratification parameter by grouping. This will split the plot by group (color) of strat.
trans	character define the transformation to apply on x or y or both variables
pmxgpar	a object of class pmx_gpar possibly the output of the
<b>pmx_gpar: Shared basic graphics parameters</b>	
labels	list list containing plot and/or axis labels: title, subtitle, x , y
axis.title	list containing element_text attributes to customize the axis title. (similar to ggplot2 axis.title theme)
axis.text	list containing element_text attributes to customize the axis text (similar to ggplot2 axis.text theme)
ranges	list limits of x/y ranges
is.smooth	logical if set to TRUE add smooth layer
smooth	list geom_smooth graphical/smoothing fun parameters
is.band	logical if TRUE add horizontal band
band	list horizontal band parameters. geom_hline graphical parameters.
is.draft	logical if TRUE add draft layer
draft	list draft layer parameters. geom_text graphical parameters.

```

is.identity_line      logical if TRUE add an identity line
identity_line        listgeom_abline graphical parameters.
scale_x_log10         logical if TRUE use log10 scale for x axis.
scale_y_log10         logical if TRUE use log10 scale for y axis.
color.scales         list define scales parameter in case of strat.color pmx\_settings
...                  others graphics parameters passed :
                    • pmx\_gpar internal function to customize shared graphical parameters
                    • distrib generic object for distribution plots (histogram/boxplot).
                    • pmx\_update function.

distrib parameters

ctr                  pmx controller

```

**Value**

ggplot2 object

**Examples**

```

# ***** basic use ***** -----

ctr <- theophylline()
## boxplot variation
p <- ctr %>% pmx_plot_eta_box()
## histogram variation
p <- ctr %>% pmx_plot_eta_hist()

# update graphical parameter -----

## add jitter
ctr %>%
  pmx_plot_eta_hist(is.jitter = TRUE, jitter = list(alpha = 0.4, color = "red"))

## remove shrinkage
ctr %>%
  pmx_plot_eta_hist(is.shrink = FALSE)

## update histogram graphical parameters
ctr %>%
  pmx_plot_eta_hist(
    histogram = list(
      color = NA,
      position = "fill",
      binwidth = 1 / 100
    )
  )

```

```

# stratification -----

## categorical stratification color parameter
ctr %>% pmx_plot_eta_hist(is.jitter = TRUE, strat.facet = ~STUD, strat.color = ~SEX)

## categorical stratification facetting
ctr %>% pmx_plot_eta_hist(strat.facet = ~SEX)

## using formula categorical stratification facetting
ctr %>% pmx_plot_eta_hist(
  strat.facet = STUD ~ SEX,
  shrink = pmx_shrink(hjust = 0.5)
)

# subsetting -----

## select a set of random effect
ctr %>% pmx_plot_eta_hist(filter = EFFECT %in% c("ka", "Cl"))
## filter and stratify by facets
ctr %>% pmx_plot_eta_hist(
  filter = EFFECT %in% c("ka", "Cl"), strat.facet = ~SEX
)
ctr %>% pmx_plot_eta_hist(
  filter = EFFECT %in% c("ka", "Cl"), strat.facet = ~SEX
)

```

---

eta\_pairs

*This creates an eta correlation which defines the relationship between parameters*

---

## Description

This creates an eta correlation which defines the relationship between parameters

## Usage

```

eta_pairs(
  is.title,
  title,
  dname = NULL,
  type.eta = c("mode", "mean"),
  text_color = "black",
  is.shrink = TRUE,
  is.smooth = TRUE,
  smooth = NULL,
  point = NULL,
  shrink = NULL,
  is.hline = FALSE,

```

```

hline = NULL,
is.vreference_line = FALSE,
vreference_line = list(colour = "orange", linetype = "longdash"),
...
)

```

### Arguments

<code>is.title</code>	logical if TRUE then a title is used for the plot
<code>title</code>	character the plot title
<code>dname</code>	name of dataset to be used
<code>type.eta</code>	character type of eat can be 'mode' or 'mean'. 'mode' by default
<code>text_color</code>	color of the correlation text in the upper matrix
<code>is.shrink</code>	logical if TRUE add shrinkage to the plot
<code>is.smooth</code>	logical if TRUE add smoothing to lower matrix plots
<code>smooth</code>	list <code>geom_smooth</code> graphical parameters
<code>point</code>	list <code>geom_point</code> graphical parameter
<code>shrink</code>	<code>pmxShrinkClass</code> shrinkage graphical parameter or list coercible into one
<code>is.hline</code>	logical if TRUE add horizontal line to lower matrix plots
<code>hline</code>	list <code>geom_hline</code> graphical parameters
<code>is.vreference_line</code>	logical if TRUE add the $\pm 1.96$ lines
<code>vreference_line</code>	list <code>geom_hline</code> graphical parameters for the reference lines
<code>...</code>	others graphics arguments passed to <code>pmx_gpar</code> internal object.

### Value

ecorrel object

### See Also

Other `plot_pmx`: `distrib()`, `eta_cov()`, `individual()`, `plot_pmx()`, `plot_pmx.distrib()`, `plot_pmx.eta_cov()`, `plot_pmx.eta_pairs()`, `plot_pmx.individual()`, `plot_pmx.pmx_dens()`, `plot_pmx.pmx_gpar()`, `plot_pmx.pmx_param_history()`, `plot_pmx.pmx_qq()`, `plot_pmx.residual()`

---

eval_sym_parent_env	<i>Try to evaluate a symbol in the parent frame (on error return the symbol)</i>
---------------------	--

---

**Description**

Try to evaluate a symbol in the parent frame (on error return the symbol)

**Usage**

```
eval_sym_parent_env(x)
```

**Arguments**

x	any object
---	------------

**Value**

evaluated symbol or the symbol in case of evaluation error

---

getPmxOption	<i>Get ggPMX Option</i>
--------------	-------------------------

---

**Description**

Get ggPMX Option

**Usage**

```
getPmxOption(name, default = NULL)
```

**Arguments**

name	Name of an option to get.
default	Value to be returned if the option is not currently set.

**Value**

value of the option or NULL

**Examples**

```
## Not run:
pmxOptions(myOption = 10)
getPmxOption("myOption")
```

```
## End(Not run)
```

---

get_abbrev	<i>Get abbreviation definition by key</i>
------------	---

---

**Description**

Get abbreviation definition by key

**Usage**

```
get_abbrev(ctr, param)
```

**Arguments**

ctr	pmxClass controller
param	abbreviation term

**Value**

character abbreviation definition

---

get_cats	<i>Get category covariates</i>
----------	--------------------------------

---

**Description**

Get category covariates

**Usage**

```
get_cats(ctr)
```

**Arguments**

ctr	the controller object
-----	-----------------------

**Value**

a character vector

**See Also**

Other pmxclass: [get\\_confs\(\)](#), [get\\_covariates\(\)](#), [get\\_data\(\)](#), [get\\_occ\(\)](#), [get\\_plot\(\)](#), [get\\_plot\\_config\(\)](#), [get\\_strats\(\)](#), [plot\\_names\(\)](#), [plots\(\)](#), [pmx\\_update\(\)](#), [set\\_data\(\)](#), [set\\_plot\(\)](#)

---

get_conts	<i>Get continuous covariates</i>
-----------	----------------------------------

---

**Description**

Get continuous covariates

**Usage**

```
get_conts(ctr)
```

**Arguments**

ctr                    the controller object

**Value**

a character vector

**See Also**

Other pmxclass: [get\\_cats\(\)](#), [get\\_covariates\(\)](#), [get\\_data\(\)](#), [get\\_occ\(\)](#), [get\\_plot\(\)](#), [get\\_plot\\_config\(\)](#), [get\\_strats\(\)](#), [plot\\_names\(\)](#), [plots\(\)](#), [pmx\\_update\(\)](#), [set\\_data\(\)](#), [set\\_plot\(\)](#)

---

get_covariates	<i>Get covariates variables</i>
----------------	---------------------------------

---

**Description**

Get covariates variables

**Usage**

```
get_covariates(ctr)
```

**Arguments**

ctr                    the controller object

**Value**

a character vector

**See Also**

Other pmxclass: [get\\_cats\(\)](#), [get\\_conts\(\)](#), [get\\_data\(\)](#), [get\\_occ\(\)](#), [get\\_plot\(\)](#), [get\\_plot\\_config\(\)](#), [get\\_strats\(\)](#), [plot\\_names\(\)](#), [plots\(\)](#), [pmx\\_update\(\)](#), [set\\_data\(\)](#), [set\\_plot\(\)](#)

---

get_data	<i>Get controller data set</i>
----------	--------------------------------

---

**Description**

Get controller data set

**Usage**

```
get_data(
  ctr,
  data_set = c("estimates", "predictions", "eta", "finegrid", "input", "sim",
              "individual")
)
```

**Arguments**

ctr	the controller object
data_set	the data set name

**Value**

a data.table of the named data set if available.

**See Also**

Other pmxclass: [get\\_cats\(\)](#), [get\\_conts\(\)](#), [get\\_covariates\(\)](#), [get\\_occ\(\)](#), [get\\_plot\(\)](#), [get\\_plot\\_config\(\)](#), [get\\_strats\(\)](#), [plot\\_names\(\)](#), [plots\(\)](#), [pmx\\_update\(\)](#), [set\\_data\(\)](#), [set\\_plot\(\)](#)

---

get_occ	<i>Get controller occasional covariates</i>
---------	---

---

**Description**

Get controller occasional covariates

**Usage**

```
get_occ(ctr)
```

**Arguments**

ctr	the controller object
-----	-----------------------

**Value**

a character vector

**See Also**

Other pmxclass: [get\\_cats\(\)](#), [get\\_conts\(\)](#), [get\\_covariates\(\)](#), [get\\_data\(\)](#), [get\\_plot\(\)](#), [get\\_plot\\_config\(\)](#), [get\\_strats\(\)](#), [plot\\_names\(\)](#), [plots\(\)](#), [pmx\\_update\(\)](#), [set\\_data\(\)](#), [set\\_plot\(\)](#)

---

get_plot	<i>Get plot object</i>
----------	------------------------

---

**Description**

Get plot object

**Usage**

```
get_plot(ctr, nplot, which_pages = "all")
```

**Arguments**

ctr	pmxClass controller object
nplot	character the plot name
which_pages	integer vector (can be length 1), set page number in case of multi pages plot, or character "all" to plot all pages.

**Value**

ggplot object

**See Also**

Other pmxclass: [get\\_cats\(\)](#), [get\\_conts\(\)](#), [get\\_covariates\(\)](#), [get\\_data\(\)](#), [get\\_occ\(\)](#), [get\\_plot\\_config\(\)](#), [get\\_strats\(\)](#), [plot\\_names\(\)](#), [plots\(\)](#), [pmx\\_update\(\)](#), [set\\_data\(\)](#), [set\\_plot\(\)](#)

**Examples**

```
library(ggPMX)
ctr <- theophylline()
p1 <- ctr %>% get_plot("iwres_ipred")
## get all pages or some pages
p2 <- ctr %>% get_plot("individual")
## returns one page of individual plot
p2 <- ctr %>% get_plot("individual", which_pages = 1)
p3 <- ctr %>% get_plot("individual", which_pages = c(1, 3))
## get distribution plot
pdistri <- ctr %>% get_plot("eta_hist")
```

---

get_plot_config	<i>Get the plot config by name</i>
-----------------	------------------------------------

---

**Description**

Get the plot config by name

**Usage**

```
get_plot_config(ctr, pname)
```

**Arguments**

ctr	the controller object
pname	the plot name

**Value**

the config object

**See Also**

Other pmxclass: [get\\_cats\(\)](#), [get\\_confs\(\)](#), [get\\_covariates\(\)](#), [get\\_data\(\)](#), [get\\_occ\(\)](#), [get\\_plot\(\)](#), [get\\_strats\(\)](#), [plot\\_names\(\)](#), [plots\(\)](#), [pmx\\_update\(\)](#), [set\\_data\(\)](#), [set\\_plot\(\)](#)

**Examples**

```
ctr <- theophylline()
ctr %>% set_plot("IND", pname = "indiv1")
ctr %>% get_plot_config("distr1")
```

---

get_strats	<i>Get extra stratification variables</i>
------------	---

---

**Description**

Get extra stratification variables

**Usage**

```
get_strats(ctr)
```

**Arguments**

ctr	the controller object
-----	-----------------------

**Value**

a character vector

**See Also**

Other pmxclass: [get\\_cats\(\)](#), [get\\_confs\(\)](#), [get\\_covariates\(\)](#), [get\\_data\(\)](#), [get\\_occ\(\)](#), [get\\_plot\(\)](#), [get\\_plot\\_config\(\)](#), [plot\\_names\(\)](#), [plots\(\)](#), [pmx\\_update\(\)](#), [set\\_data\(\)](#), [set\\_plot\(\)](#)

---

`gtable_remove_grobs`     *Remove named elements from gtable*

---

**Description**

Remove named elements from gtable

**Usage**

```
gtable_remove_grobs(table, names, ...)
```

**Arguments**

<code>table</code>	The table from which grobs should be removed
<code>names</code>	A character vector of the grob names (as listed in <code>table\$layout</code> ) that should be removed
<code>...</code>	Other parameters passed through to <code>gtable_filter</code> .

**Value**

`table` The table with removed grobs

---

<code>individual</code>	<i>This function can be used to obtain individual prediction and compare with observed data and population prediction for each individual separately</i>
-------------------------	--

---

**Description**

This function can be used to obtain individual prediction and compare with observed data and population prediction for each individual separately

**Usage**

```
individual(
  labels,
  facets = NULL,
  dname = NULL,
  ipred_line = NULL,
  pred_line = NULL,
  point = NULL,
  bloq = NULL,
  is.legend,
  use.finegrid,
  ...
)
```

**Arguments**

labels	plot texts. labels, axis,
facets	list facets settings nrow/ncol
dname	name of dataset to be used
ipred_line	list some pred line geom properties aesthetics
pred_line	list some ipred line geom properties aesthetics
point	list some point geom properties aesthetics
bloq	pmxBLOQ object created by <a href="#">pmx_bloq</a>
is.legend	logical if TRUE add a legend
use.finegrid	logical if FALSE use predictions data set
...	others graphics arguments passed to <a href="#">pmx_gpar</a> internal object.

**Value**

individual fit object

**See Also**

[plot\\_pmx.individual](#)

Other plot\_pmx: [distrib\(\)](#), [eta\\_cov\(\)](#), [eta\\_pairs\(\)](#), [plot\\_pmx\(\)](#), [plot\\_pmx.distrib\(\)](#), [plot\\_pmx.eta\\_cov\(\)](#), [plot\\_pmx.eta\\_pairs\(\)](#), [plot\\_pmx.individual\(\)](#), [plot\\_pmx.pmx\\_dens\(\)](#), [plot\\_pmx.pmx\\_gpar\(\)](#), [plot\\_pmx.pmx\\_param\\_history\(\)](#), [plot\\_pmx.pmx\\_qq\(\)](#), [plot\\_pmx.residual\(\)](#)

---

input_finegrid	<i>Merge input and finegrid data sets</i>
----------------	---

---

**Description**

Merge input and finegrid data sets

**Usage**

```
input_finegrid(input, finegrid)
```

**Arguments**

input	data.table input data set
finegrid	data.table finegrid data set

**Value**

data.table

---

is.pmx_gpar	<i>Check if an object is a pmx_gpar class</i>
-------------	---

---

**Description**

Check if an object is a pmx\_gpar class

**Usage**

```
is.pmx_gpar(x)
```

**Arguments**

x	pmx_gpar object
---	-----------------

**Value**

logical returns TRUE if it is a pmx\_gpar object

---

load_config	<i>Obtain the data source config</i>
-------------	--------------------------------------

---

**Description**

Obtain the data source config

**Usage**

```
load_config(x, sys = c("mlx", "nm", "mlx18"))
```

**Arguments**

x	the config name.
sys	can be mlx,nm,...

**Value**

a list :data configuration object

---

load_data_set	<i>Load data set</i>
---------------	----------------------

---

**Description**

Load data set

**Usage**

```
load_data_set(x, path, sys, ...)
```

**Arguments**

x	data set config
path	character path to the directory
sys	character mlx or nm
...	extra parameter passed to special readers

**Value**

data.table

---

load_source	<i>Load all/or some source data set</i>
-------------	---

---

**Description**

Load all/or some source data set

**Usage**

```
load_source(sys, path, dconf, ...)
```

**Arguments**

sys	type cane mlx/nom
path	character directory path containing all sources.
dconf	configuration object
...	any extra parameters for readers

**Value**

list of data.table

---

l_left_join	<i>Merge 2 lists</i>
-------------	----------------------

---

**Description**

left join , the first list is updated by the second one

**Usage**

```
l_left_join(base_list, overlay_list, recursive = TRUE)
```

**Arguments**

base_list	list to update
overlay_list	list used to update the first list
recursive	logical if TRUE do the merge in depth

**Value**

list

---

n_pages	<i>Determine the number of pages in a paginated facet plot</i>
---------	--

---

**Description**

This is a simple helper that returns the number of pages it takes to plot all panels when using [facet\\_wrap\\_paginate](#). It partially builds the plot so depending on the complexity of your plot it might take some time to calculate...

**Usage**

```
n_pages(plot)
```

**Arguments**

plot	A ggplot object using either <code>facet_wrap_paginate</code> or <code>facet_grid_paginate</code>
------	---

**Value**

If the plot uses using either `facet_wrap_paginate` or `facet_grid_paginate` it returns the total number of pages. Otherwise it returns NULL

---

param_table	<i>Creates parameter kable</i>
-------------	--------------------------------

---

**Description**

Creates parameter kable

**Usage**

```
param_table(ctr, fun, return_table = FALSE, scientific = FALSE, digits = 2)
```

**Arguments**

ctr	Generated controller from e.g. <a href="#">pmx_mlx</a> for Monolix.
fun	character can be "sd" or "var" for shrinkage computation, see <a href="#">pmx_comp_shrink</a>
return_table	If TRUE, returns the same table as in <code>get_data('estimates')</code> otherwise it returns a kable
scientific	logical set to TRUE to get scientific notation of parameter values, or FALSE otherwise
digits	integer the number of significant digits to use when rounding parameter values

**Value**

Returns a kable with the parameter estimates from `get_data('estimates')`

**Examples**

```
#ctr <- theophylline()
#my_params <- ctr %>% param_table(fun = "var")
```

---

parse_mlxtran	<i>Parse MONOLIX mlxtran file</i>
---------------	-----------------------------------

---

**Description**

Parse MONOLIX mlxtran file

**Usage**

```
parse_mlxtran(file_name)
```

**Arguments**

file\_name      absolute path to mlxtran file

**Value**

list key/values to initialize ggPMX controller

---

pk_occ	<i>Creates pmx controller using monlix data having Occasional variable</i>
--------	--

---

**Description**

Creates pmx controller using monlix data having Occasional variable

**Usage**

```
pk_occ()
```

**Value**

pmx controller

**Examples**

```
## Not run:
pk_occ()

## End(Not run)
```

---

pk_pd	<i>Creates pkpd pmx controller using package internal data</i>
-------	--

---

**Description**

Creates pkpd pmx controller using package internal data

**Usage**

```
pk_pd(code = "3")
```

**Arguments**

code	can be 3 or 4
------	---------------

---

plots	<i>Get plots description</i>
-------	------------------------------

---

**Description**

Get plots description

**Usage**

```
plots(ctr)
```

**Arguments**

ctr	pmxClass controller object
-----	----------------------------

**Value**

data.frame of plots

**See Also**

Other pmxclass: [get\\_cats\(\)](#), [get\\_conts\(\)](#), [get\\_covariates\(\)](#), [get\\_data\(\)](#), [get\\_occ\(\)](#), [get\\_plot\(\)](#), [get\\_plot\\_config\(\)](#), [get\\_strats\(\)](#), [plot\\_names\(\)](#), [pmx\\_update\(\)](#), [set\\_data\(\)](#), [set\\_plot\(\)](#)

---

plot_names	<i>Get plot names</i>
------------	-----------------------

---

**Description**

Get plot names

**Usage**

```
plot_names(ctr)
```

**Arguments**

ctr	pmxClass controller object
-----	----------------------------

**Value**

list of plot names

**See Also**

Other pmxclass: [get\\_cats\(\)](#), [get\\_confs\(\)](#), [get\\_covariates\(\)](#), [get\\_data\(\)](#), [get\\_occ\(\)](#), [get\\_plot\(\)](#), [get\\_plot\\_config\(\)](#), [get\\_strats\(\)](#), [plots\(\)](#), [pmx\\_update\(\)](#), [set\\_data\(\)](#), [set\\_plot\(\)](#)

---

plot_pmx	<i>This is a generic plot method that produces all plots by default described in pmx model evaluation guidance.</i>
----------	---

---

**Description**

This is a generic plot method that produces all plots by default described in pmx model evaluation guidance.

**Usage**

```
plot_pmx(x, dx, ...)

## S3 method for class 'pmx_vpc'
plot_pmx(x, dx, ...)
```

**Arguments**

x	object to plot
dx	data.table , plot source data
...	extra argument (not used)

**See Also**

[pmx\\_gpar](#).

Other plot\_pmx: [distrib\(\)](#), [eta\\_cov\(\)](#), [eta\\_pairs\(\)](#), [individual\(\)](#), [plot\\_pmx.distrib\(\)](#), [plot\\_pmx.eta\\_cov\(\)](#), [plot\\_pmx.eta\\_pairs\(\)](#), [plot\\_pmx.individual\(\)](#), [plot\\_pmx.pmx\\_dens\(\)](#), [plot\\_pmx.pmx\\_gpar\(\)](#), [plot\\_pmx.pmx\\_param\\_history\(\)](#), [plot\\_pmx.pmx\\_qq\(\)](#), [plot\\_pmx.residual\(\)](#)

---

plot_pmx.distrib	<i>Plot EBE distribution</i>
------------------	------------------------------

---

**Description**

Plot EBE distribution

**Usage**

```
## S3 method for class 'distrib'
plot_pmx(x, dx, ...)
```

**Arguments**

x	distribution object
dx	data set
...	not used for the moment

**Value**

ggplot2 plot

**See Also**

[distrib](#)

Other plot\_pmx: [distrib\(\)](#), [eta\\_cov\(\)](#), [eta\\_pairs\(\)](#), [individual\(\)](#), [plot\\_pmx\(\)](#), [plot\\_pmx.eta\\_cov\(\)](#), [plot\\_pmx.eta\\_pairs\(\)](#), [plot\\_pmx.individual\(\)](#), [plot\\_pmx.pmx\\_dens\(\)](#), [plot\\_pmx.pmx\\_gpar\(\)](#), [plot\\_pmx.pmx\\_param\\_history\(\)](#), [plot\\_pmx.pmx\\_qq\(\)](#), [plot\\_pmx.residual\(\)](#)

---

plot_pmx.eta_cov	<i>This plots an ETA covariance matrix which can be used to define the co-relation between the parameters and its shrinkage</i>
------------------	---

---

**Description**

This plots an ETA covariance matrix which can be used to define the co-relation between the parameters and its shrinkage

**Usage**

```
## S3 method for class 'eta_cov'
plot_pmx(x, dx, ...)
```

**Arguments**

x	eta_cov object
dx	data set
...	not used for the moment

**Value**

ggplot2 plot

**See Also**

[eta\\_cov](#)

Other plot\_pmx: [distrib\(\)](#), [eta\\_cov\(\)](#), [eta\\_pairs\(\)](#), [individual\(\)](#), [plot\\_pmx\(\)](#), [plot\\_pmx.distrib\(\)](#), [plot\\_pmx.eta\\_pairs\(\)](#), [plot\\_pmx.individual\(\)](#), [plot\\_pmx.pmx\\_dens\(\)](#), [plot\\_pmx.pmx\\_gpar\(\)](#), [plot\\_pmx.pmx\\_param\\_history\(\)](#), [plot\\_pmx.pmx\\_qq\(\)](#), [plot\\_pmx.residual\(\)](#)

---

plot_pmx.eta_pairs	<i>Plot random effect correlation plot</i>
--------------------	--

---

**Description**

Plot random effect correlation plot

**Usage**

```
## S3 method for class 'eta_pairs'
plot_pmx(x, dx, ...)
```

**Arguments**

x	distribution object
dx	data set
...	not used for the moment

**Value**

ggpairs plot

**See Also**

[distrib](#)

Other plot\_pmx: [distrib\(\)](#), [eta\\_cov\(\)](#), [eta\\_pairs\(\)](#), [individual\(\)](#), [plot\\_pmx\(\)](#), [plot\\_pmx.distrib\(\)](#), [plot\\_pmx.eta\\_cov\(\)](#), [plot\\_pmx.individual\(\)](#), [plot\\_pmx.pmx\\_dens\(\)](#), [plot\\_pmx.pmx\\_gpar\(\)](#), [plot\\_pmx.pmx\\_param\\_history\(\)](#), [plot\\_pmx.pmx\\_qq\(\)](#), [plot\\_pmx.residual\(\)](#)

---

plot_pmx.individual	<i>This function can be used to plot individual prediction and compare with observed data and population prediction for each individual separately</i>
---------------------	--

---

**Description**

This function can be used to plot individual prediction and compare with observed data and population prediction for each individual separately

**Usage**

```
## S3 method for class 'individual'
plot_pmx(x, dx, ...)
```

**Arguments**

x	individual object
dx	data set
...	not used for the moment

**Value**

a list of ggplot2

**See Also**

Other plot\_pmx: [distrib\(\)](#), [eta\\_cov\(\)](#), [eta\\_pairs\(\)](#), [individual\(\)](#), [plot\\_pmx\(\)](#), [plot\\_pmx.distrib\(\)](#), [plot\\_pmx.eta\\_cov\(\)](#), [plot\\_pmx.eta\\_pairs\(\)](#), [plot\\_pmx.pmx\\_dens\(\)](#), [plot\\_pmx.pmx\\_gpar\(\)](#), [plot\\_pmx.pmx\\_param\\_history\(\)](#), [plot\\_pmx.pmx\\_qq\(\)](#), [plot\\_pmx.residual\(\)](#)

---

plot\_pmx.pmx\_dens      *This function plots EBE versus covariates using qq plots*

---

### Description

This function plots EBE versus covariates using qq plots

### Usage

```
## S3 method for class 'pmx_dens'
plot_pmx(x, dx, ...)
```

### Arguments

x	eta_cov object
dx	data set
...	not used for the moment

### Value

ggplot2 plot

### See Also

[eta\\_cov](#)

Other plot\_pmx: [distrib\(\)](#), [eta\\_cov\(\)](#), [eta\\_pairs\(\)](#), [individual\(\)](#), [plot\\_pmx\(\)](#), [plot\\_pmx.distrib\(\)](#), [plot\\_pmx.eta\\_cov\(\)](#), [plot\\_pmx.eta\\_pairs\(\)](#), [plot\\_pmx.individual\(\)](#), [plot\\_pmx.pmx\\_gpar\(\)](#), [plot\\_pmx.pmx\\_param\\_history\(\)](#), [plot\\_pmx.pmx\\_qq\(\)](#), [plot\\_pmx.residual\(\)](#)

---

plot\_pmx.pmx\_gpar      *The ggPMX base plot function*

---

### Description

This function should be called internally by other plots to set general settings like , smoothing, add band, labelling, theming,...

### Usage

```
## S3 method for class 'pmx_gpar'
plot_pmx(x, dx, ...)
```

**Arguments**

x	object of pmx_gpar type
dx	plot
...	ignored parameters

**Value**

ggplot2 object

**See Also**

Other plot\_pmx: [distrib\(\)](#), [eta\\_cov\(\)](#), [eta\\_pairs\(\)](#), [individual\(\)](#), [plot\\_pmx\(\)](#), [plot\\_pmx.distrib\(\)](#), [plot\\_pmx.eta\\_cov\(\)](#), [plot\\_pmx.eta\\_pairs\(\)](#), [plot\\_pmx.individual\(\)](#), [plot\\_pmx.pmx\\_dens\(\)](#), [plot\\_pmx.pmx\\_param\\_history\(\)](#), [plot\\_pmx.pmx\\_qq\(\)](#), [plot\\_pmx.residual\(\)](#)

---

plot\_pmx.pmx\_param\_history

*S3 method for plots of class pmx\_param\_history*

---

**Description**

S3 method for plots of class pmx\_param\_history

**Usage**

```
## S3 method for class 'pmx_param_history'  
plot_pmx(x, dx, ...)
```

**Arguments**

x	pmx_param_history object
dx	data set
...	not used

**Value**

ggplot2 plot

**See Also**

Other plot\_pmx: [distrib\(\)](#), [eta\\_cov\(\)](#), [eta\\_pairs\(\)](#), [individual\(\)](#), [plot\\_pmx\(\)](#), [plot\\_pmx.distrib\(\)](#), [plot\\_pmx.eta\\_cov\(\)](#), [plot\\_pmx.eta\\_pairs\(\)](#), [plot\\_pmx.individual\(\)](#), [plot\\_pmx.pmx\\_dens\(\)](#), [plot\\_pmx.pmx\\_gpar\(\)](#), [plot\\_pmx.pmx\\_qq\(\)](#), [plot\\_pmx.residual\(\)](#)

---

plot_pmx.pmx_qq	<i>This function plot EBE versus covariates using qq plots</i>
-----------------	--

---

**Description**

This function plot EBE versus covariates using qq plots

**Usage**

```
## S3 method for class 'pmx_qq'
plot_pmx(x, dx, ...)
```

**Arguments**

x	pmx_qq object
dx	data set
...	not used for the moment

**Value**

ggplot2 plot

**See Also**

[eta\\_cov](#)

Other plot\_pmx: [distrib\(\)](#), [eta\\_cov\(\)](#), [eta\\_pairs\(\)](#), [individual\(\)](#), [plot\\_pmx\(\)](#), [plot\\_pmx.distrib\(\)](#), [plot\\_pmx.eta\\_cov\(\)](#), [plot\\_pmx.eta\\_pairs\(\)](#), [plot\\_pmx.individual\(\)](#), [plot\\_pmx.pmx\\_dens\(\)](#), [plot\\_pmx.pmx\\_gpar\(\)](#), [plot\\_pmx.pmx\\_param\\_history\(\)](#), [plot\\_pmx.residual\(\)](#)

---

plot_pmx.residual	<i>This function plots residual for each observed value by finding the difference between observed and predicted points. It also fits a distribution to the residual value.</i>
-------------------	---

---

**Description**

This function plots residual for each observed value by finding the difference between observed and predicted points. It also fits a distribution to the residual value.

**Usage**

```
## S3 method for class 'residual'
plot_pmx(x, dx, ...)
```

**Arguments**

x	residual object
dx	data set
...	not used for the moment

**Value**

ggplot2 object

**See Also**

---

plot\_shrink

*Plot shrink in eta matrix*

---

**Description**

Plot shrink in eta matrix

**Usage**

```
plot_shrink(x, shrink.dx, shrink)
```

**Arguments**

x	pmx_gpar object
shrink.dx	data.table of shrinkage
shrink	pmxShrinkClass shrinkage graphical parameter or list coercible into one

**Value**

ggplot2 object

---

pmx

*Create a pmx object*

---

## Description

Create a pmx object from a data source

## Usage

```
pmx(  
  config,  
  sys = "mlx",  
  directory,  
  input,  
  dv,  
  dvid,  
  cats = NULL,  
  conts = NULL,  
  occ = NULL,  
  strats = NULL,  
  settings = NULL,  
  endpoint = NULL,  
  sim = NULL,  
  bloq = NULL,  
  id = NULL,  
  time = NULL,  
  sim_blq = NULL  
)
```

```
pmx_mlx(  
  config,  
  directory,  
  input,  
  dv,  
  dvid,  
  cats,  
  conts,  
  occ,  
  strats,  
  settings,  
  endpoint,  
  sim,  
  bloq,  
  id,  
  time,  
  sim_blq  
)
```

```

pmx_mlxtran(
  file_name,
  config = "standing",
  call = FALSE,
  endpoint,
  version = -1,
  ...
)

```

### Arguments

config	Can be either : The complete path for the configuration file, the name of configuration within the built-in list of configurations, or a configuration object.
sys	the system name can "mlx" (for Monolix 2016) or "mlx18" (for Monolix 2018/19 and later)
directory	character modelling output directory.
input	character complete path to the modelling input file
dv	character the name of measurable variable used in the input modelling file
dvid	<i>[Optional]</i> character observation type parameter. This is mandatory in case of multiple endpoint (PKPD).
cats	<i>[Optional]</i> character vector of categorical covariates
conts	<i>[Optional]</i> character vector of continuous covariates
occ	<i>[Optional]</i> character occasional covariate variable name
strats	<i>[Optional]</i> character extra stratification variables
settings	<i>[Optional]</i> pmxSettingsClass <code>pmx_settings</code> shared between all plots
endpoint	pmxEndpointClass or integer or character default to NULL of the endpoint code. <code>pmx_endpoint</code>
sim	pmxSimClass default to NULL. <code>pmx_sim</code> used for VPC, e.g.: <code>sim = pmx_sim(file=vpc_file, irun="rep", idv="TIME")</code>
bloq	pmxBLOQClass default to NULL. <code>pmx_bloq</code> specify bloq, within controller: e.g. <code>bloq=pmx_bloq(cens = "BLOQ_name", limit = "LIMIT_name")</code>
id	<i>[Optional]</i> character the name of Individual variable used in the input modelling file
time	<i>[Optional]</i> character Time variable.
sim_bloq	logical if TRUE uses sim_bloq values for plotting. Only for Monolix 2018 and later.
file_name	character mlxtran file path.
call	logical if TRUE the result is the parameters parsed
version	integer Non-negative integer. Non-obligatory option, if you don't use a wildcard in the file_name. Otherwise you MUST provide version and wildcard will be substituted with "version", which represents the mlxtran model version.
...	extra arguments passed to pmx_mlx.

## Details

`pmx_mlx` is a wrapper to `mlx` for the MONOLIX system (`sys="mlx"`)

`pmx_mlxtran` parses `mlxtran` file and guess `pmx_mlx` arguments. In case of multi endpoint the first endpoint is selected. You can though set the endpoint through the same argument. When you set `call=TRUE`, no controller is created but only the parameters parsed by `mlxtran`. This can be very helpful, in case you would like to customize parameters (adding settings vi `pmx_settings`, `chnag eth` edefault endpoint.)

## Value

`pmxClass` controller object.

## Examples

```
## Example to create the controller using theophylline data
theophylline <- file.path(system.file(package = "ggPMX"), "testdata",
                          "theophylline")
WORK_DIR <- file.path(theophylline, "Monolix")
input_file <- file.path(theophylline, "data_pk.csv")

## using only mandatory variables
ctr <- pmx(
  sys="mlx",
  config = "standing",
  directory = WORK_DIR,
  input = input_file,
  dv = "Y",
  dvid ="DVID"
)
## Using covariates
ctr <- pmx(
  sys="mlx",
  config = "standing",
  directory = WORK_DIR,
  input = input_file,
  dv = "Y",
  dvid ="DVID",
  cats=c("SEX"),
  conts=c("WT0", "AGE0"),
  strats="STUD"
)
## using settings parameter
ctr <- pmx(
  sys="mlx",
  config = "standing",
  directory = WORK_DIR,
  input = input_file,
  dv = "Y",
  dvid ="DVID",
  settings=list(is.draft=FALSE)
```

```

)

## using mlxtran file
mlxtran_file <-
  file.path(system.file(package = "ggPMX"),
            "testdata", "1_popPK_model", "project.mlxtran")
pmx_mlxtran(mlxtran_file)

## mlxtran , call =TRUE to get the pmx_mlx argument parsed by pmx_mlxtran
params <- pmx_mlxtran(mlxtran_file, call=TRUE)

str(params)
# $ directory: chr results_pathile
# $ input    : chr observation file path
# $ dv       : chr "DV"
# $ cats     : chr [1:4] "SEX" "RACE" "DISE" "ILOW"
# $ conts    : chr [1:4] "AGE0" "WT0" "HT0" "TRT"
# $ occ      : chr "ISS"
# $ dvid     : chr "YTYPE"
# $ endpoint :List of 5
# ..$ code   : chr "1"
# ..$ label  : chr ""
# ..$ unit   : chr ""
# ..$ file.code: chr "1"
# ..$ trans  : NULL
# ..$ attr(*, "class")= chr "pmxEndpointClass"
# $ config   : chr "standing"

```

---

pmxOptions

*This function can be used to set ggPMX options*

---

### Description

getPmxOption retrieves the value of a ggPMX option. ggPMXOptions sets the value of ggPMX options; it can also be used to return a list of all currently-set ggPMX options.

### Usage

```
pmxOptions(...)
```

### Arguments

... Options to set, with the form name = value.

### Details

There is a global option set, which is available by default.

**Value**

list with options that were set by the user

**Options used in ggPMX**

- **template\_dir**: path to template directory

**Examples**

```
## Not run:
pmxOptions(template_dir = PATH_TO_CUSTOM_CONFIGURATION)

## End(Not run)
```

---

pmx_bloq	<i>Creates BLOQ object attributes</i>
----------	---------------------------------------

---

**Description**

Creates BLOQ object attributes

**Usage**

```
pmx_bloq(
  cens = "CENS",
  limit = "LIMIT",
  colour = "pink",
  size = 2,
  linewidth = 1,
  alpha = 0.9,
  show = TRUE,
  ...
)
```

**Arguments**

cens	character the censoring column name
limit	character the limit column name (optional)
colour	character the color of the geom
size	numeric the size of the geom when using geom_point()
linewidth	numeric the line width of the segment when using geom_segment()
alpha	numeric the alpha of the geom
show	logical if FALSE remove all censory observations
...	any other graphical parameter

**Details**

To define that a measurement is censored, the observation data set should include a CENSORING column ( default to 'CENS' ) and put 1 for lower limit or -1 for upper limit.

Optionally, data set can contain have a limit column ( default to 'LIMIT' ) column to set the other limit.

---

pmx_comp_shrink	<i>Compute Shrinkage</i>
-----------------	--------------------------

---

**Description**

Compute Shrinkage

**Usage**

```
pmx_comp_shrink(
  ctr,
  fun = c("var", "sd"),
  strat.facet,
  strat.color,
  filter,
  ...
)
```

**Arguments**

ctr	pmxClass controller object
fun	character can be sd or var , var by default
strat.facet	formula optional stratification parameter
strat.color	character optional stratification parameter
filter	optional filter which will be applied to plotting data
...	others parameters not used for the moment

**Value**

data.table

---

pmx_config	<i>This function can be used to define the pmx configuration used in plots. e.g. Monolix/Nonmem</i>
------------	---

---

### Description

This function can be used to define the pmx configuration used in plots. e.g. Monolix/Nonmem

### Usage

```
pmx_config(sys = "mlx", inputs, plots, ...)
```

### Arguments

sys	charcarter system used , monolix,nonmem,...
inputs	charcater path to the inputs settings file (yaml format)
plots	charcater path to the inputs settings file (yaml format)
...	extra arguments not used

### Details

To create a controller user can create a pmxConfig object using

- either an input template file
- or a plot template file
- or both.

By default the 'standing' configuration will be used.

### Value

pmxConfig object

### Examples

```
# ***** Create a controller using custom plot configuration ***** -----

library(ggPMX)
theophylline <- file.path(
  system.file(package = "ggPMX"), "testdata",
  "theophylline"
)
WORK_DIR <- file.path(theophylline, "Monolix")
input_file <- file.path(theophylline, "data_pk.csv")

# create a controller with a custom plots template
ctr <- pmx_mlx(
  config = pmx_config(
    plots=file.path( system.file(package = "ggPMX"),"examples/plots.yaml"),
```

```

    inputs = system.file(package = "ggPMX", "examples/custom_inputs.yaml")
  ),
  directory = WORK_DIR,
  input = input_file,
  dv = "Y",
  dvid = "DVID",
  cats = c("SEX"),
  conts = c("WT0", "AGE0"),
  strats = "STUD"
)

## get the list of plots
ctr %>% plots
ctr %>% get_plot("custom_res_time")
ctr %>% get_plot("custom_npde_time")

```

---

pmx\_copy

*Creates a deep copy of the controller*

---

## Description

Creates a deep copy of the controller

## Usage

```
pmx_copy(ctr, keep_globals = FALSE, ...)
```

## Arguments

ctr	pmxClass object
keep_globals	logical if TRUE we keep the global parameters changed by pmx_settings
...	extra parameters passed to pmx_settings

## Details

The controller is an ‘R6’ object, it behaves like a reference object. Some functions ( methods) can have a side effect on the controller and modify it internally. Technically speaking we talk about chaining not piping here. However , using pmx\_copy user can work on a copy of the controller.

By default the copy does not keep global parameters set using pmx\_settings.

## Value

an object of pmxClass

**Examples**

```
ctr <- theophylline()
cctr <- ctr %>% pmx_copy()
## Any change in the ctr has no side effect in the ctr and vice versa
```

---

pmx_cov	<i>Select/Map covariates using human labels</i>
---------	---

---

**Description**

Select/Map covariates using human labels

**Usage**

```
pmx_cov(values, labels = NULL)
```

**Arguments**

values	list of covariates to use to create the plot
labels	list of covariates facets labels

**Details**

In case of ‘pmx\_plot\_eta\_cats’ and ‘pmx\_plot\_eta\_conts’ you can customize the covariates and covaraites labels using ‘pmx\_cov’.

**Value**

pmxCOVObject object

---

pmx_dens	<i>Creates a density plot object</i>
----------	--------------------------------------

---

**Description**

Creates a density plot object

**Usage**

```
pmx_dens(
  x,
  labels,
  dname = NULL,
  xlim = 3,
  var_line = NULL,
  snd_line = NULL,
  vline = NULL,
  is.legend = TRUE,
  ...
)
```

**Arguments**

x	character variable name to sample
labels	list of texts/titles used within the plot
dname	name of dataset to be used
xlim	numeric x axis limits
var_line	list variable density graphics parameters
snd_line	list normal density graphics parameters
vline	list vertical line graphics parameters
is.legend	logical whether to add a legend (defaults TRUE)
...	others graphics arguments passed to <a href="#">pmx_gpar</a> internal object.

**Details**

**labels** is a list that contains:

- **title:** plot title default "IWRES density plot"
- **x:** x axis label default to "Etas"
- **y:** y axis label default to empty

**var\_line** is a list that contains:

- **linetype:** default to 1
- **color:** default to black
- **linewidth:** default to 1

**snd\_line** is a list that contains:

- **linetype:** default to 2
- **color:** default to black
- **linewidth:** default to 1

**vline** is a list that contains:

- **linetype:** default to 3
- **color:** default to black
- **linewidth:** default to 1

### Value

list with options for density plot object

---

pmx_endpoint	<i>Creates pmx endpoint object</i>
--------------	------------------------------------

---

### Description

Creates pmx endpoint object

### Usage

```
pmx_endpoint(code, label = "", unit = "", file.code = code, trans = NULL)
```

### Arguments

code	character endpoint code : used to filter observations <code>DVID==code</code> .
label	character endpoint label: used to set title and axis labels
unit	character endpoint unit : used to set title and axis labels
file.code	character endpoint file code : used to set predictions and finegrid files extensions in case using code parameter is not enough.
trans	list Transformation parameter not used yet.

### Details

In case of multiple endpoints, pkpd case for example, we need to pass endpoint to the pmx call. Internally , ggPMX will filter the observations data set to keep only rows satisfying `DVID==code`. The code is also used to find the right predictions and or finegrid files. ggPMX use the configuration file to find the path of the predictions file (like the single endpoint case) and then filter the right file using the code parameter.

For example:

- `predictions{code}.txt` for mlx16
- `predictions{code}.txt` and `y{code}_residual` for mlx18

For some tricky examples the code parameter is not enough to find the files. In that case the `file.code` parameter is used to distinguish the endpoint files.

## Examples

```
## Use file.code parameter
pk_pd_path <- file.path(system.file(package = "ggPMX"), "testdata","pk_pd")

WORK_DIR <- file.path(pk_pd_path, "RESULTS")

ep <- pmx_endpoint(
  code="4",
  file.code="2"
)

input_file <- file.path(pk_pd_path, "pk_pd.csv")

ctr <- pmx_mlx(
  config = "standing",
  directory = WORK_DIR,
  input = input_file,
  dv = "dv",
  dvid = "dvid",
  cats = "sex",
  conts = "wt",
  endpoint = ep
)

## using mlxtran

ep <- pmx_endpoint(
  code="3",
  file.code="1"
)

mlxtran_file <- file.path(pk_pd_path, "pk_pd.mlxtran")
ctr <- pmx_mlxtran(mlxtran_file,endpoint=ep)
```

---

pmx\_filter

*filter data in a pmx controller*

---

## Description

filter data in a pmx controller

## Usage

```
pmx_filter(
  ctr,
  data_set = c("estimates", "predictions", "eta", "finegrid", "shrink", "input",
    "individual", "sim_blq"),
  pmx_exp
)
```

**Arguments**

ctr	A controller. An object of 'pmxClass'
data_set	A data_set within the controller to apply a filter to.
pmx_exp	A filter expression

**Value**

Returns a pmx controller with a filtered data set.

**Examples**

```
## example of global filter
ctr <- theophylline()
ctr %>% pmx_filter(data_set = "prediction", ID == 5 & TIME < 2)
ctr %>% get_data("prediction")
```

---

pmx_get_configs	<i>Get List of built-in configurations</i>
-----------------	--

---

**Description**

Get List of built-in configurations

**Usage**

```
pmx_get_configs(sys = "mlx")
```

**Arguments**

sys	can be mlx, by default all configurations will be listed
-----	--

**Value**

names of the config

**Examples**

```
pmx_get_configs()
```

pmx\_gpar

*Handling pmx Graphical parameters***Description**

Handling pmx Graphical parameters

**Usage**

```
pmx_gpar(
  is.title,
  labels,
  axis.title,
  which_pages,
  print,
  axis.text,
  ranges,
  is.smooth,
  smooth,
  is.band,
  band,
  is.draft,
  draft,
  discrete,
  is.identity_line,
  identity_line,
  smooth_with_bloq,
  scale_x_log10,
  scale_y_log10,
  color.scales,
  is.legend,
  legend.position
)
```

**Arguments**

is.title	logical if TRUE then a title is used for the plot
labels	list of labels, like title, subtitle, x , y
axis.title	list or element_text (same as ggplot2 axis.title theme)
which_pages	page(s) to display; if "all" display all pages, if 1 display first page, if c(1,2) display first and second pages
print	if TRUE the ouptut will be a print not a ggplot2. This is useful for rmarkdwon output to avoid verbose list index print.
axis.text	list or element_text (same as ggplot2 axis.text theme)
ranges	limits of x/y ranges

is.smooth	logical if set to TRUE add smooth layer
smooth	smooth layer parameters
is.band	logical if TRUE add horizontal band
band	horizontal band parameters
is.draft	logical if TRUE add draft layer
draft	draft layer parameters
discrete	logical if TRUE x axis is discrete(FALSE by default)
is.identity_line	logical if TRUE add y=x line
identity_line	list y=x aes properties
smooth_with_bloq	logical if TRUE perform spline in plots with BLOQ data
scale_x_log10	logical if TRUE add scale_x_log10 layer
scale_y_log10	logical if TRUE add scale_y_log10 layer
color.scales	list define scales parameter in case of strat.color <a href="#">pmx_settings</a>
is.legend	logical if TRUE x axis is discrete(FALSE by default)
legend.position	charcater legend position it takes the same value as the equivalent ggplot2 parameter

### Details

This object contains all general graphic settings. It used internally by all `pmx_plot`(generic function) to set the default behavior.

### Value

An object of class "pmx\_gpar".

---

`pmx_list_nm_tables`      *List NONMEM output tables*

---

### Description

List NONMEM output tables file names from a `nm_model` object.

### Usage

```
pmx_list_nm_tables(nm_model = NULL)
```

### Arguments

`nm_model`      An `nm_model` object generated with [pmx\\_read\\_nm\\_model](#).

**See Also**

[pmx\\_read\\_nm\\_model](#), [pmx\\_read\\_nm\\_tables](#)

**Examples**

```
## Not run:
pmx_read_nm_model(file = 'run001.lst') %>%
  pmx_list_nm_tables()

## End(Not run)
```

---

pmx\_manual\_nm\_import *Manually define nonmem tables to be imported*

---

**Description**

Manually provide names of the table files to be imported.

**Usage**

```
pmx_manual_nm_import(
  tab_names = c("sdtab", "mutab", "patab", "catab", "cotab", "mytab", "extra", "xptab",
    "cwtab"),
  tab_suffix = "",
  sim_suffix = "sim"
)
```

**Arguments**

tab_names	Provide the name of the tables to import e.g. 'sdtab', 'patab', 'cotab', 'catab' for NONMEM.
tab_suffix	Default is "", but can be changed to any character string to be used as suffix in the table names.
sim_suffix	Default is 'sim', but can be changed to any character string to be used as suffix in the simulation table names e.g. sdtab001sim.

---

pmx\_nlmixr                      *Creates pmx controller from an nlmixr fit object*

---

### Description

Creates pmx controller from an nlmixr fit object

### Usage

```
pmx_nlmixr(fit, dvid, conts, cats, strats, endpoint, settings, vpc = FALSE)
```

### Arguments

fit	nlmixr object
dvid	<i>[Optional]</i> character observation type parameter.
conts	<i>[Optional]</i> character vector of continuous covariates
cats	<i>[Optional]</i> character vector of categorical covariates
strats	<i>[Optional]</i> character extra stratification variables
endpoint	pmxEndpointClass or integer or character default to NULL of the endpoint code. <a href="#">pmx_endpoint</a>
settings	<i>[Optional]</i> pmxSettingsClass <a href="#">pmx_settings</a>
vpc	<i>[Optional]</i> logical a boolean indicating if vpc should be calculated (by default TRUE)

### Value

pmxClass controller object.

---

pmx\_nm                              *Creates pmx controller from NONMEM model outputs*

---

### Description

Creates pmx controller from NONMEM model outputs

**Usage**

```

pmx_nm(
  file = NULL,
  directory = ".",
  runno = NULL,
  ext = ".lst",
  table_suffix = "",
  sim_suffix = "sim",
  simfile = NULL,
  prefix = "run",
  table_names = c("sdtab", "mutab", "patab", "catab", "cotab", "mytab", "extra", "xptab",
    "cwtab"),
  dvid = "DVID",
  pred = "PRED",
  time = "TIME",
  dv = "DV",
  conts,
  cats,
  npde,
  iwres,
  ipred,
  endpoint,
  strats = "",
  settings = pmx_settings(),
  vpc = TRUE,
  bloq = NULL,
  obs = FALSE,
  quiet = FALSE
)

```

**Arguments**

<code>file</code>	A character vector of path to the files or a <code>nm_table_list</code> object created with <code>pmx_list_nm_tables</code> .
<code>directory</code>	directory of the model files.
<code>runno</code>	run number which is used for generating the model file name, or used for alternative import of NONMEM-output tables.
<code>ext</code>	Extension to be used to generate model file name. Should be one of <code>' .lst'</code> (default), <code>' .out'</code> , <code>' .res'</code> , <code>' .mod'</code> or <code>' .ctl'</code> for NONMEM.
<code>table_suffix</code>	suffix of the output tables, standard is <code>""</code> (no suffix).
<code>sim_suffix</code>	suffix of the simulation output tables, standard is <code>"sim"</code> (e.g. <code>stdab1sim</code> ).
<code>simfile</code>	Useful if the simulation is performed post-hoc and an additional simulation model file is generated e.g. <code>"simulation.lst"</code> ; similar to <code>"file"</code> see above.
<code>prefix</code>	Prefix to be used to generate model file name. Used in combination with <code>runno</code> and <code>ext</code> .

table_names	contains the names of the NONMEM-output tables e.g. "sdtab", "patab", "cotab", "catab".
dvid	<i>[Optional]</i> character observation type parameter, mandatory in case of multiple endpoint (PKPD). Standard = "DVID"
pred	<i>[Optional]</i> character specifying variable name of the population prediction (standard ggPMX nomenclature = "PRED")
time	<i>[Optional]</i> character specifying variable name of time (standard ggPMX nomenclature = "TIME")
dv	character the name of measurable variable used in the input modelling file (standard ggPMX nomenclature = "DV")
conts	<i>[Optional]</i> character vector of continuous covariates (automatically detected if "cotab" is provided)
cats	<i>[Optional]</i> character vector of categorical covariates (automatically detected if "catab" is provided)
npde	<i>[Optional]</i> character specifying variable name of the normalized population predictor (standard ggPMX nomenclature = "NPDE")
iwres	<i>[Optional]</i> character specifying variable name of the individual weighted residuals (standard ggPMX nomenclature = "IWRES")
ipred	<i>[Optional]</i> character specifying variable name of the individual population prediction (standard ggPMX nomenclature = "IPRED")
endpoint	<i>[Optional]</i> pmxEndpointClass or integer or character default to NULL of the endpoint code. <a href="#">pmx_endpoint</a>
strats	<i>[Optional]</i> character extra stratification variables
settings	pmxSettingsClass <a href="#">pmx_settings</a> shared between all plots
vpc	logical a boolean indicating if vpc should be calculated, simulation tables are required for VPC generation (by default TRUE)
bloq	pmxBLOQClass default to NULL. <a href="#">pmx_bloq</a> specify bloq, within controller: e.g. bloq=pmx_bloq(cens = "BLOQ_name", limit = "LIMIT_name")
obs	logical if set to TRUE will filter dataset according to "MDV", default is FALSE
quiet	Logical, if FALSE messages are printed to the console.

**Value**

pmxClass controller object.

**Author(s)**

The ggPMX NONMEM reader (pmx\_nm) is strongly based on NONMEM reading functions of the xpose package (v.0.4.11) (Thanks to Benjamin Guiastrenec) To avoid conflicts with the xpose package, the necessary xpose-based functions have been renamed with a "pmx\_" prefix. If the user wants to use individual functions e.g. "read\_nm\_tables" please use the xpose-package

**Examples**

```
## using only runnumber
# ctr <- pmx_nm(
#   directory=model_dir,
#   runno = "001"
#)

## using a model file (e.g. run001.lst)
#ctr <- pmx_nm(
#   directory=model_dir,
#   file = "run001.lst"
#)

## if simulation was performed post-hoc, an additional simulation file can be loaded for VPC
#ctr <- pmx_nm(
#   directory=model_dir,
#   file = "run001.lst",
#   simfile = "simulation.ct1"
#)

## loading with individual table(s)-names
#ctr <- pmx_nm(directory = model_dir,
#              #           runno = 3,
#              #           table_names = "xptab")
```

---

pmx\_plot

*Generic pmx plot*

---

**Description**

Generic pmx plot

**Usage**

```
pmx_plot(ctr, pname, ...)
```

**Arguments**

ctr	pmxClass pmx controller
pname	plot name
...	others graphics parameters passed :
	<ul style="list-style-type: none"> <li>• <a href="#">pmx_gpar</a> internal function to customize shared graphical parameters</li> <li>• <a href="#">pmx_qq</a> quantile-quantile plot object</li> <li>• <a href="#">pmx_update</a> function.</li> </ul>

**Value**

ggplot2 object

---

pmx\_plot\_cats      *Generic pmx stratified plot*

---

**Description**

Generic pmx stratified plot

**Usage**

```
pmx_plot_cats(ctr, pname, cats, chunk = "", print = TRUE, ...)
```

**Arguments**

ctr	pmxClass pmx controller
pname	plot name
cats	list of categorical variables. By default all of them
chunk	chunk name
print	logical if TRUE print plots otherwise the list of plots is returned
...	others graphics parameters passed : <ul style="list-style-type: none"> <li>• <a href="#">pmx_gpar</a> internal function to customize shared graphical parameters</li> <li>• <a href="#">pmx_qq</a> quantile-quantile plot object</li> <li>• <a href="#">pmx_update</a> function.</li> </ul>

**Value**

ggplot2 object(s)

---

pmx\_plot\_eta\_matrix      *Eta matrix plot*

---

**Description**

Eta matrix plot

**Usage**

```
pmx_plot_eta_matrix(
  ctr,
  title,
  dname,
  type.eta,
  text_color,
  is.shrink,
```

```

shrink,
point,
is.smooth,
smooth,
is.hline,
hline,
is.vreference_line,
vreference_line,
filter,
strat.facet,
facets,
strat.color,
trans,
pmxgpar,
labels,
axis.title,
axis.text,
ranges,
is.band,
band,
is.draft,
draft,
is.identity_line,
identity_line,
scale_x_log10,
scale_y_log10,
color.scales,
...
)

```

### Arguments

ctr	pmx controller
title	character the plot title
dname	name of dataset to be used
type.eta	character type of eat can be 'mode' or 'mean'.'mode' by default
text_color	color of the correlation text in the upper matrix
is.shrink	logical if TRUE add shrinkage to the plot
shrink	pmxShrinkClass shrinkage graphical parameter or list coercible into one
point	list geom_point graphical parameter
is.smooth	logical if TRUE add smoothing to lower matrix plots
smooth	list geom_smooth graphical parameters
is.hline	logical if TRUE add horizontal line to lower matrix plots
hline	list geom_hline graphical parameters
is.vreference_line	logical if TRUE add reference line to diag plots

vreference_line	list geom_vline graphical parameters
	<b>pmx_update parameters</b>
filter	expression filter which will be applied to plotting data.
strat.facet	formula optional stratification parameter by facetting. This split plot by strats(each strat in a facet)
facets	list facet_wrap parameters.
strat.color	character optional stratification parameter by grouping. This will split the plot by group (color) of strat.
trans	character define the transformation to apply on x or y or both variables
pmxgpar	a object of class pmx_gpar possibly the output of the <b>pmx_gpar: Shared basic graphics parameters</b>
labels	list list containing plot and/or axis labels: title, subtitle, x , y
axis.title	list containing element_text attributes to customize the axis title. (similar to ggplot2 axis.title theme)
axis.text	list containing element_text attributes to customize the axis text (similar to ggplot2 axis.text theme)
ranges	list limits of x/y ranges
is.band	logical if TRUE add horizontal band
band	list horizontal band parameters. geom_hline graphical parameters.
is.draft	logical if TRUE add draft layer
draft	list draft layer parameters. geom_text graphical parameters.
is.identity_line	logical if TRUE add an identity line
identity_line	listgeom_abline graphical parameters.
scale_x_log10	logical if TRUE use log10 scale for x axis.
scale_y_log10	logical if TRUE use log10 scale for y axis.
color.scales	list define scales parameter in case of strat.color <a href="#">pmx_settings</a>
...	others graphics parameters passed : <ul style="list-style-type: none"> <li>• <a href="#">pmx_gpar</a> internal function to customize shared graphical parameters</li> <li>• <a href="#">eta_pairs</a> ggPMX internal function for eta matrix plot.</li> <li>• <a href="#">pmx_update</a> function.</li> </ul> <b>eta_pairs parameters</b>

**Value**

ggplot2 object

**Examples**

```

# basic use -----

ctr <- theophylline()
p <- ctr %>% pmx_plot_eta_matrix

# update graphical parameter -----

## update labels
ctr %>% pmx_plot_eta_matrix(
  labels = list(title = "Eta matrix new title")
)

## remove draft
ctr %>% pmx_plot_eta_matrix(is.draft = FALSE)

## change text color line
ctr %>% pmx_plot_eta_matrix(
  text_color="red",
  shrink=pmx_shrink(mapping=aes(color="magenta"))
)

## custom point aes and static parameters
## we can customize any geom_point parameter
ctr %>% pmx_plot_eta_matrix(
  point = list(color = "blue", shape = 4)
)

# stratification -----

## IGNORE continuous stratification
ctr %>% pmx_plot_eta_matrix(strat.color = "WT0")
## IGNORE categorical stratification
ctr %>% pmx_plot_eta_matrix(strat.facet = ~SEX)

# subsetting -----

## we can use any expression involving the data
ctr %>% pmx_plot_eta_matrix(filter = EFFECT%in% c("C1","ka"))

```

---

pmx\_plot\_individual    *Individual plot*

---

**Description**

Individual plot

**Usage**

```

pmx_plot_individual(
  ctr,
  which_pages = 1L,
  print = FALSE,
  dname,
  pred_line,
  ipred_line,
  point,
  is.legend,
  use.finegrid,
  bloq,
  filter,
  strat.facet,
  facets,
  strat.color,
  trans,
  pmxgpar,
  labels,
  axis.title,
  axis.text,
  ranges,
  is.smooth,
  smooth,
  is.band,
  band,
  is.draft,
  draft,
  is.identity_line,
  identity_line,
  scale_x_log10,
  scale_y_log10,
  color.scales,
  ...
)

```

**Arguments**

ctr	pmx controller
which_pages	integer page(s) to display, or character "all" to display all pages (argument previously called npage, now deprecated)
print	logical if TRUE the ouput will be a print not a ggplot2. This is useful for rmarkdwon output to avoid verbose list index print.
dname	character name of dataset to be used. User can create his own dataset using <a href="#">set_data</a> and pass it as dname to be plotted.
pred_line	list some ipred line geom properties aesthetics
ipred_line	list some pred line geom properties aesthetics

point	list some point geom properties aesthetics
is.legend	logical if TRUE add a legend
use.finegrid	logical if FALSE use predictions data set
bloq	pmxBLOQ object created by <a href="#">pmx_bloq</a> .
<b>pmx_update parameters</b>	
filter	expression filter which will be applied to plotting data.
strat.facet	formula optional stratification parameter by facetting. This split plot by strats(each strat in a facet)
facets	list facet_wrap parameters.
strat.color	character optional stratification parameter by grouping. This will split the plot by group (color) of strat.
trans	character define the transformation to apply on x or y or both variables
pmxgpar	a object of class pmx_gpar possibly the output of the
<b>pmx_gpar: Shared basic graphics parameters</b>	
labels	list list containing plot and/or axis labels: title, subtitle, x , y
axis.title	list containing element_text attributes to customize the axis title. (similar to ggplot2 axis.title theme)
axis.text	list containing element_text attributes to customize the axis text (similar to ggplot2 axis.text theme)
ranges	list limits of x/y ranges
is.smooth	logical if set to TRUE add smooth layer
smooth	list geom_smooth graphical/smoothing fun parameters
is.band	logical if TRUE add horizontal band
band	list horizontal band parameters. geom_hline graphical parameters.
is.draft	logical if TRUE add draft layer
draft	list draft layer parameters. geom_text graphical parameters.
is.identity_line	logical if TRUE add an identity line
identity_line	listgeom_abline graphical parameters.
scale_x_log10	logical if TRUE use log10 scale for x axis.
scale_y_log10	logical if TRUE use log10 scale for y axis.
color.scales	list define scales parameter in case of strat.color <a href="#">pmx_settings</a>
...	others graphics parameters passed : <ul style="list-style-type: none"> <li>• <a href="#">pmx_gpar</a> internal function to customize shared graphical parameters</li> <li>• <a href="#">individual</a> generic object for individual plots.</li> <li>• <a href="#">pmx_update</a> function.</li> </ul>
<b>individual parameters</b>	

**Value**

ggplot2 or list of ggplot2 objects

**Examples**

```

# basic use -----
ctr <- theophylline()
ctr %>% pmx_plot_individual(which_pages = 1)
## multiple pages
ctr %>% pmx_plot_individual(which_pages = c(1, 3))
## change faceting
ctr %>% pmx_plot_individual(facets = list(nrow = 5, ncol = 5), which_pages = 2)

# update graphical parameter -----
## update labels
ctr %>% pmx_plot_individual(
  labels = list(title = "Custom individual plot")
)

## remove draft
ctr %>% pmx_plot_individual(is.draft = FALSE)

## Customize ipred_line with any geom_line parameter
ctr %>% pmx_plot_individual(
  pred_line = list(color = "red", linetype = 20, alpha = 0.5)
)

## Customize ipred_line with any geom_line parameter
ctr %>% pmx_plot_individual(
  ipred_line = list(size = 5)
)

## Customize any geom_point parameter
ctr %>% pmx_plot_individual(
  point = list(aes(alpha = DV), color = "green", shape = 4)
)

## legend

p <- ctr %>% pmx_plot_individual(
  is.legend=TRUE,
  point=list(shape=20),
  pred_line=list(linetype=6)

    band,
    is.draft,
    draft,
    is.identity_line,
    identity_line,
    scale_x_log10,
    scale_y_log10,
    color.scales,
    ...
  )

```

### Arguments

ctr	pmx controller
sim_bldq	logical if TRUE uses sim_bldq as dataset for plotting instead of predictions.
dname	character name of dataset to be used. User can create his own dataset using <a href="#">set_data</a> and pass it as dname to be plotted.
xlim	numeric x axis limits
var_line	list variable density graphics parameters
snd_line	list normal density graphics parameters
vline	list vertical line graphics parameters
<b>pmx_update parameters</b>	
filter	expression filter which will be applied to plotting data.
strat.facet	formula optional stratification parameter by faceting. This split plot by strats(each strat in a facet)
facets	list facet_wrap parameters.
strat.color	character optional stratification parameter by grouping. This will split the plot by group (color) of strat.
trans	character define the transformation to apply on x or y or both variables
pmxgpar	a object of class pmx_gpar possibly the output of the <b>pmx_gpar: Shared basic graphics parameters</b>
labels	list list containing plot and/or axis labels: title, subtitle, x , y
axis.title	list containing element_text attributes to customize the axis title. (similar to ggplot2 axis.title theme)
axis.text	list containing element_text attributes to customize the axis text (similar to ggplot2 axis.text theme)
ranges	list limits of x/y ranges
is.smooth	logical if set to TRUE add smooth layer
smooth	list geom_smooth graphical/smoothing fun parameters

is.band	logical if TRUE add horizontal band
band	list horizontal band parameters. geom_hline graphical parameters.
is.draft	logical if TRUE add draft layer
draft	list draft layer parameters. geom_text graphical parameters.
is.identity_line	logical if TRUE add an identity line
identity_line	listgeom_abline graphical parameters.
scale_x_log10	logical if TRUE use log10 scale for x axis.
scale_y_log10	logical if TRUE use log10 scale for y axis.
color.scales	list define scales parameter in case of strat.color <a href="#">pmx_settings</a>
...	others graphics parameters passed : <ul style="list-style-type: none"> <li>• <a href="#">pmx_gpar</a> internal function to customize shared graphical parameters</li> <li>• <a href="#">pmx_dens</a> pmx density object.</li> <li>• <a href="#">pmx_update</a> function.</li> </ul>

#### **pmx\_dens parameters**

#### **Value**

ggplot2 or list of ggplot2 objects

---

pmx\_plot\_saem\_convergence

*SAEM Convergence Plot*

---

#### **Description**

This plot displays the sequence of estimates for population parameters computed after each iteration of the SAEM algorithm. The purpose is to check the convergence of the algorithm. In addition, a convergence indicator gives the estimation for  $-2 \times \log$ -likelihood along the iterations.

#### **Usage**

```
pmx_plot_saem_convergence(ctr, ...)
```

#### **Arguments**

ctr	pmxClass controller.
...	additional parameters (not used).

#### **Value**

A ggplot object showing SAEM convergence plot.

---

`pmx_plot_vpc`*VPC plot*

---

**Description**

VPC plot

**Usage**

```
pmx_plot_vpc(  
  ctr,  
  type,  
  idv,  
  obs,  
  pi,  
  ci,  
  rug,  
  bin,  
  is.legend,  
  sim_bld,  
  dname,  
  filter,  
  strat.facet,  
  facets,  
  strat.color,  
  trans,  
  pmxgpar,  
  labels,  
  axis.title,  
  axis.text,  
  ranges,  
  is.smooth,  
  smooth,  
  is.band,  
  band,  
  is.draft,  
  draft,  
  is.identity_line,  
  identity_line,  
  scale_x_log10,  
  scale_y_log10,  
  color.scales,  
  is.footnote,  
  ...  
)
```

**Arguments**

ctr	pmx controller
type	character can be either percentile or scatter
idv	character individual variable
obs	pmx_vpc_obs object observation layer <a href="#">pmx_vpc_obs</a>
pi	pmx_vpc_pi object percentile layer <a href="#">pmx_vpc_pi</a>
ci	pmx_vpc_ci object confidence interval layer <a href="#">pmx_vpc_ci</a>
rug	pmx_vpc_rug object rug layer <a href="#">pmx_vpc_rug</a> . Note: consider not using a rug layer when <code>bin[["within_strat"]]=TRUE</code> , since the rugs plotted will not reflect the bins.
bin	pmx_vpc_bin object <a href="#">pmx_vpc_bin</a> specify within <code>pmx_plot_vpc()</code> e.g.: <code>bin = pmx_vpc_bin(style = "kmeans", n = 10)</code>
is.legend	logical if TRUE add legend
sim_bfq	logical if TRUE uses <code>sim_bfq</code> values for plotting. Only for Monolix 2018 and later.
dname	added for compatibility with other ggPMX plots
	<b>pmx_update parameters</b>
filter	expression filter which will be applied to plotting data.
strat.facet	formula optional stratification parameter by faceting. This split plot by strats(each strat in a facet)
facets	list <code>facet_wrap</code> parameters.
strat.color	character optional stratification parameter by grouping. This will split the plot by group (color) of strat.
trans	character define the transformation to apply on x or y or both variables
pmxgpar	a object of class <code>pmx_gpar</code> possibly the output of the
	<b>pmx_gpar: Shared basic graphics parameters</b>
labels	list list containing plot and/or axis labels: title, subtitle, x , y
axis.title	list containing <code>element_text</code> attributes to customize the axis title. (similar to <code>ggplot2 axis.title</code> theme)
axis.text	list containing <code>element_text</code> attributes to customize the axis text (similar to <code>ggplot2 axis.text</code> theme)
ranges	list limits of x/y ranges
is.smooth	logical if set to TRUE add smooth layer
smooth	list <code>geom_smooth</code> graphical/smoothing fun parameters
is.band	logical if TRUE add horizontal band
band	list horizontal band parameters. <code>geom_hline</code> graphical parameters.
is.draft	logical if TRUE add draft layer
draft	list draft layer parameters. <code>geom_text</code> graphical parameters.
is.identity_line	logical if TRUE add an identity line

identity\_line listgeom\_abline graphical parameters.  
 scale\_x\_log10 logical if TRUE use log10 scale for x axis.  
 scale\_y\_log10 logical if TRUE use log10 scale for y axis.  
 color.scales list define scales parameter in case of strat.color [pmx\\_settings](#)  
 is.footnote logical if TRUE add footnote  
 ... others graphics parameters passed :

- [pmx\\_gpar](#) internal function to customize shared graphical parameters
- [pmx\\_vpc](#) pmx vpc object.
- [pmx\\_update](#) function.

### pmx\_vpc parameters

### Details

You can use [pmx\\_vpc\\_bin](#) to set the bin parameters. In case of stratification, binning can be different for each strat level (case within\_strat equal to FALSE).

### Value

ggplot2 or list of ggplot2 objects

### See Also

Other vpc: [pmx\\_vpc\(\)](#), [pmx\\_vpc\\_bin\(\)](#), [pmx\\_vpc\\_ci\(\)](#), [pmx\\_vpc\\_obs\(\)](#), [pmx\\_vpc\\_pi\(\)](#), [pmx\\_vpc\\_rug\(\)](#)

### Examples

```
library(ggPMX)

theo_path <- file.path(
  system.file(package = "ggPMX"), "testdata",
  "theophylline"
)
WORK_DIR <- file.path(theo_path, "Monolix")
input_file <- file.path(theo_path, "data_pk.csv")
vpc_file <- file.path(theo_path, "sim.csv")

ctr <- pmx_mlx(
  config = "standing",

)

```

---

pmx\_qq

*This function creates a qq plot object*

---

## Description

This function creates a qq plot object

## Usage

```
pmx_qq(
```

```

    x,
    labels,
    dname = NULL,
    point = NULL,
    xmax = TRUE,
    facets = NULL,
    is.reference_line = NULL,
    reference_line = NULL,
    is.shrink = NULL,
    shrink = NULL,
    is.hline = NULL,
    hline = NULL,
    is.vline = NULL,
    vline = NULL,
    ...
  )

```

### Arguments

<code>x</code>	character variable name to sample
<code>labels</code>	list of texts/titles used within the plot
<code>dname</code>	name of dataset to be used
<code>point</code>	list geom_point attributes color, shape,...
<code>xmax</code>	logical if FALSE do not use max(aes(x)) as limits default to TRUE
<code>facets</code>	list
<code>is.reference_line</code>	logical if TRUE add reference line to the plot
<code>reference_line</code>	list geom_line attributes. Used only for pmx_plot_eta_qq
<code>is.shrink</code>	logical if TRUE add shrinkage to the plot
<code>shrink</code>	pmxShrinkClass shrinkage graphical parameter or list coercible into one
<code>is.hline</code>	logical if TRUE add horizontal line $y=0$ ( TRUE by default)
<code>hline</code>	geom hline graphical parameters
<code>is.vline</code>	logical if TRUE add vertical line $x=0$ ( TRUE by default)
<code>vline</code>	geom vline graphical parameters
<code>...</code>	others graphics arguments passed to <a href="#">pmx_gpar</a> internal object.

### Details

**labels** is a list that contains:

- **title:** plot title default "EBE vs. covariates"
- **x:** x axis label default to "Etas"
- **y:** y axis label default to empty

**point** is a list that contains:

- **shape:** default to 1
- **color:** default to black
- **size:** default to 1

**Value**

pmx\_qq object

---

pmx\_qq\_plot

*Quantile-quantile plots*

---

**Description**

Quantile-quantile plots

Quantile-quantile plot of IWRES

Quantile-quantile plot of eta variables

Quantile-quantile plot of NPDE

Quantile-quantile plot of NPD

Quantile-quantile plot of CWRES

**Usage**

pmx_plot_npde_qq(ctr, ...)

pmx_plot_npd_qq(ctr, ...)

pmx_plot_cwres_qq(ctr, ...)

```

### Arguments

dtype	name of dataset to be used
point	list geom_point parameters.
is.reference_line	logical if TRUE add reference line to the plot
reference_line	list geom_abline parameters.
is.shrink	logical if TRUE add shrinkage to the plot
shrink	pmxShrinkClass shrinkage graphical parameter or list coercible into one
is.hline	logical if TRUE add horizontal line y=0 ( TRUE by default)
hline	list geom_hline graphical parameters
is.vline	logical if TRUE add vertical line x=0 ( TRUE by default)
vline	list geom_vline graphical parameters
<b>pmx_update parameters</b>	
filter	expression filter which will be applied to plotting data.
strat.facet	formula optional stratification parameter by facetting. This split plot by strats(each strat in a facet)
facets	list facet_wrap parameters.
strat.color	character optional stratification parameter by grouping. This will split the plot by group (color) of strat.
trans	character define the transformation to apply on x or y or both variables
pmxgpar	an object of class pmx_gpar

labels	list list containing plot and/or axis labels: title, subtitle, x , y
axis.title	list containing element_text attributes to customize the axis title. (similar to ggplot2 axis.title theme)
axis.text	list containing element_text attributes to customize the axis text (similar to ggplot2 axis.text theme)
ranges	list limits of x/y ranges
is.smooth	logical if set to TRUE add smooth layer
smooth	list geom_smooth graphical/smoothing fun parameters
is.band	logical if TRUE add horizontal band
band	list horizontal band parameters. geom_hline graphical parameters.
is.draft	logical if TRUE add draft layer
draft	list draft layer parameters. geom_text graphical parameters.
is.identity_line	logical if TRUE add an identity line
identity_line	listgeom_abline graphical parameters.
scale_x_log10	logical if TRUE use log10 scale for x axis.
scale_y_log10	logical if TRUE use log10 scale for y axis.
color.scales	list define scales parameter in case of strat.color <a href="#">pmx_settings</a>
...	others graphics parameters passed : <ul style="list-style-type: none"> <li>• <a href="#">pmx_gpar</a> internal function to customize shared graphical parameters</li> <li>• <a href="#">pmx_qq</a> quantile-quantile plot object.</li> <li>• <a href="#">pmx_update</a> function.</li> </ul>
	<b>pmx_qq parameters</b>
ctr	pmx controller

**Value**

ggplot2 object

**Examples**

```
# ***** basic use ***** -----

ctr <- theophylline()
ctr %>% pmx_plot_eta_qq
ctr %>% pmx_plot_npde_qq
ctr %>% pmx_plot_iwres_qq

# update graphical parameter -----

## add reference line
ctr %>% pmx_plot_npde_qq(reference_line=list(color="blue"))
```

```

## remove reference line
ctr %>% pmx_plot_eta_qq(reference_line=NULL)

# stratification -----

## categorical stratification color parameter
ctr %>% pmx_plot_iwres_qq(strat.facet=~STUD,strat.color="SEX")
## categorical stratification faceting
ctr %>% pmx_plot_eta_qq(strat.facet = ~SEX)

## do not use symmetric axis
ctr %>% pmx_plot_npde_qq(xmax=FALSE,reference_line=list())

```

---

pmx\_read\_nm\_files      *NONMEM output file import function*

---

## Description

Quickly import NONMEM output files into R.

## Usage

```

pmx_read_nm_files(
  runno = NULL,
  prefix = "run",
  ext = c(".ext", ".cor", ".cov", ".phi", ".grd", ".shk"),
  file = NULL,
  dir = NULL,
  quiet = FALSE
)

```

## Arguments

runno	Run number to be evaluated.
prefix	Prefix of the model file names.
ext	A vector of the file extension to import. By default '.ext', '.cor', '.cov', '.phi', '.grd', '.shk' files are listed.
file	Names of the model output file to be imported. Alternative argument to prefix, runno and ext.
dir	Location of the model files.
quiet	Logical, if FALSE messages are printed to the console.

## Examples

```
## Not run:
# Using the `file` argument to import a model file:
ext_file <- pmx_read_nm_files(file = 'run001.ext', dir = 'models')

# Using the `runno` argument to import a model file:
ext_file <- pmx_read_nm_files(runno = '001', ext = '.ext', dir = 'models')

## End(Not run)
```

---

pmx\_read\_nm\_model      *NONMEM model file parser*

---

## Description

Parse NONMEM model files in R format

## Usage

```
pmx_read_nm_model(
  runno = NULL,
  prefix = "run",
  ext = ".lst",
  file = NULL,
  dir = NULL
)
```

## Arguments

runno	run number which is used for generating the model file name
prefix	Prefix to be used to generate model file name. Used in combination with runno and ext.
ext	Extension to be used to generate model file name. Should be one of '.lst' (default), '.out', '.res', '.mod' or '.ctl' for NONMEM.
file	A character vector of path to the files or a nm_table_list object created with list_nm_tables.
dir	directory of the model files.

## Value

A [tibble](#) of class model containing the following columns:

- **problem:** a numeric identifier for the \$PROBLEM associated with the code.
- **level:** a unique numeric identifier to each subroutine block associated with the code.

- **subroutine:** a character identifier named after the 3 first letters of the subroutine name e.g. '\$THETA' and '\$TABLE' will become 'the' and 'tab' respectively. In addition all output from the .lst is labeled 'lst', the general nonmem output e.g. NM-TRAN messages are labelled 'oth'. With priors thp, tpv, omp, opd, sip, spd abbreviations are given to the THETAP, THETAPV, OMEGAP, etc.
- **code:** the code without comments or subroutine names e.g. '\$THETA 0.5 ; TVCL' will return '0.5'.
- **comment:** the last comment of a record e.g. '0.5 ; Clearance (L/h) ; TVCL' will return 'TVCL'.

## Not run:
# Using the `file` argument to import a model file:
nm_model <- pmx_read_nm_model(file = 'run001.lst', dir = 'models')

# Using the `runno` argument to import a model file:
nm_model <- pmx_read_nm_model(runno = '001', ext = '.lst', dir = 'models')

## End(Not run)
```

---

pmx\_read\_nm\_tables      *NONMEM output table import function*

---

### Description

Quickly import NONMEM output tables into R. This function automatically detects the optimal settings to import the tables from nonmem. It is based on the read\_nm\_tables function of xpose. Slight adjustment were made for purposes of pmx\_nm()

### Usage

```
pmx_read_nm_tables(
  file = NULL,
  dir = NULL,
  combined = TRUE,
  rm_duplicates = TRUE,
  quiet = FALSE,
  simtab = NULL,
  ziptab = TRUE,
  user_mode = TRUE,
  ...
)
```

**Arguments**

file	A character vector of path to the files or a nm_table_list object created with list_nm_tables.
dir	Location of the model files.
combined	Logical value indicating whether multiple tables should be combined into a single one. If the number of rows does not match an error will be returned.
rm_duplicates	Logical value indicating whether duplicated columns should be removed.
quiet	Logical, if FALSE messages are printed to the console.
simtab	If TRUE only reads in simulation tables, if FALSE only reads estimation tables. Default NULL reads all tables.
ziptab	If TRUE search for the tables that have been compressed and renamed <code>??&lt;file&gt;.zip</code> .
user_mode	Adjustment to the original code: usermode is set to "usermode = TRUE" in order to improve this function for purposes of pmx_nm() (nonmem_reader.R), In order to use this function separately, the use of the original function in the xpose package is advised.
...	Additional arguments to be passed to the <a href="#">read_table</a> or <a href="#">read_csv</a> functions.

**Table format requirement**

When using `pmx_read_nm_tables` with the `combined` argument set to `FALSE` an ID column must be present in all data tables. When `combined` is set to `TRUE` instead an ID column must be present in at least one table for each problem and for each 'firstonly' category. ID columns are required to properly combine/merge tables and removing NA records. If the ID column is missing from a table and `combined = FALSE` `pmx_read_nm_tables` will return the following warning: Unknown variables: `ID`. While the data is returned beware that NA records might be left in the data and the output should be checked carefully. If `combined = TRUE` `pmx_read_nm_tables` is more strict and will return the following warning instead: Dropped ``<tablename>`` due to missing required `ID` column..

**Examples**

```
## Not run:

# Adjustment to the original code: usermode is set to "usermode = TRUE"
# in order to improve this function for purposes of pmx_nm() (nonmem_reader.R)
# In order to use this function separately, the use of the original function in
# the xpose package is advised.

# Import tables manually and return them as a list of individual tables
nm_tables <- pmx_read_nm_tables(file = c('sdtab001', 'patab001'),
                              dir = 'models', combined = FALSE)

# Import tables manually and return them as a single merged table
nm_tables <- pmx_read_nm_tables(file = c('sdtab001', 'patab001'),
                              dir = 'models', combined = TRUE)

## End(Not run)
```

---

pmx\_register\_plot      *Register plot (Jun2025, Alex: I believe it doesn't work at all)*

---

**Description**

Register plot (Jun2025, Alex: I believe it doesn't work at all)

**Usage**

```
pmx_register_plot(ctr, pp, pname = NULL)
```

**Arguments**

ctr	pmxClass controller
pp	ggplot2 plot
pname	character plot nme

---

pmx\_report      *Generates ggpmX report from a pre-defined template*

---

**Description**

Generates ggpmX report from a pre-defined template

**Usage**

```
pmx_report(  
  contr,  
  name,  
  save_dir,  
  plots_subdir = "ggpmx_GOF",  
  output = c("all", "plots", "report"),  
  template = "standing",  
  footnote = output == "all",  
  edit = FALSE,  
  format = NULL,  
  title,  
  ...  
)
```

**Arguments**

contr	pmxClass controller
name	character The report name
save_dir	Output directory. A directory to write the results files to
plots_subdir	Output folder name, ggpmx_GOF by default
output	character the result type, can be a standalone directory of plots or a report document as defined in the template (pdf, docx,...) ,or both
template	character ggPMX predefined template or the path to a custom rmarkdown template. Use <a href="#">pmx_report_template</a> to get the list of available templates
footnote	logical TRUE to add a footnote to the generated plots. The default footnote is to add the path where the plot is saved.
edit	logical TRUE to edit the template immediately
format	character The output document format. By default, a word report is generated. User can specify one or more formats from c("word", "pdf", "html", "all"). format "all" to generate all formats.
title	character report title (optional)
...	extra parameters depending in the template used

**Details**

pmx\_report uses pre-defined template .Rmd to generate the report. The idea is to pass the controller as a report argument using knitr params artifact.

**Examples**

```
library(ggPMX)
# you probably want to create the report in your own directory
# But using a temp directory allows for easy cleanup

## case1: generate a single report
withr::with_tempdir({
  ctr <- theophylline()
  ctr %>% pmx_report(
    name = "my_report",
    save_dir = getwd(),
    output="report"
  )
})

## case2: generate standalone plots
withr::with_tempdir({
  ctr <- theophylline()
```

```
ctr %>% pmx_report(  
  name = "my_report",  
  save_dir = getwd(),  
  output="plots"  
)  
})  
  
## case3: generate both : reports + plots  
## by default add footnote  
## Note, you can force footnote to FALSE using footnote parameter  
withr::with_tempdir({  
  ctr <- theophylline()  
  ctr %>% pmx_report(  
    name="my_report",  
    save_dir=getwd(),  
    output="all"  
  )  
})  
  
## case4 : generate standalone plots with footnotes  
withr::with_tempdir({  
  ctr <- theophylline()  
  ctr %>% pmx_report(  
    name="my_report",  
    save_dir=getwd(),  
    footnote=TRUE,  
    output="plots"  
  )  
})  
  
## case6: dynamic edit  
## uncomment to run  
# ctr <- theophylline()  
# ctr %>% pmx_report(  
#   save_dir = file.path(getwd(),"case6"),  
#   name="my_report",  
#   output="report",  
#   edit = TRUE)  
  
## case7 : generate individual plots report  
## ctr <- theophylline()  
## ctr %>% pmx_report(  
##   name="report2",  
##   save_dir = getwd(),  
##   template="individual",  
##   format="all",  
##   which_pages=1:2  
## )
```

---

pmx\_report\_template     *Gets build-in report templates*

---

**Description**

Gets build-in report templates

**Usage**

```
pmx_report_template()
```

**Value**

list of templates names

**Examples**

```
pmx_report_template()
```

---

pmx\_settings             *Create controller global settings*

---

**Description**

Create controller global settings

**Usage**

```
pmx_settings(  
  is.draft = TRUE,  
  use.abbrev = TRUE,  
  color.scales = NULL,  
  cats.labels = NULL,  
  use.labels = FALSE,  
  use.titles = FALSE,  
  effects = NULL,  
  ...  
)
```

**Arguments**

<code>is.draft</code>	logical if FALSE any plot is without draft annotation
<code>use.abbrev</code>	logical if FALSE use full description from abbreviation mapping for axis names
<code>color.scales</code>	list list containing elements of <code>scale_color_manual</code>
<code>cats.labels</code>	list list of named vectors for each factor
<code>use.labels</code>	logical if TRUE replace factor named by <code>cats.labels</code>
<code>use.titles</code>	logical FALSE to generate plots without titles
<code>effects</code>	list list of effects levels and labels
<code>...</code>	extra parameter not used yet

**Value**

`pmxSettingsClass` object

**Examples**

```
library(ggPMX)
library(ggplot2)
ctr <- theophylline(
  settings=
    pmx_settings(
      color.scales=list(
        "Study",
        labels=c("Study 1","Study 2"),
        values=c("1"="lightyellow","2"="lightblue")),
      cats.labels=list(
        SEX=c("0"="M","1"="F"),
        STUD=c("1"="Study 1","2"="Study 2")
      ),
      use.abbrev=TRUE,
      is.draft=TRUE,
      use.labels=TRUE
    )
)

ctr %>%
  pmx_plot_npde_time(strat.color="STUD",strat.facet=~SEX)
#
#
ctr %>%
  pmx_plot_eta_box(strat.color="STUD", strat.facet =~SEX)

ctr %>% pmx_plot_eta_hist
```

---

pmx\_shrink                      *Create shrinkage parameter object*

---

### Description

Create shrinkage parameter object

### Usage

```
pmx_shrink(
  fun = c("var", "sd"),
  size = 1,
  color = "green",
  vjust = 1.5,
  hjust = 0.5,
  ...
)
```

### Arguments

fun	list shrinkage function can be sd or var
size	numeric shrinkage text size
color	character shrinkage text color
vjust	numeric shrinkage position vertical adjustment
hjust	numeric shrinkage position horizontal adjustment
...	any other parameter

### Value

pmxShrinkClass object (list)

---

pmx\_sim                      *Create simulation object*

---

### Description

Create simulation object

### Usage

```
pmx_sim(file, data, irun, idv)
```

**Arguments**

file	character path to the simulation file
data	data.table simulation data
irun	character name of the simulation column
idv	character name of the ind. variable

**Examples**

```

library(ggPMX)

theo_path <- file.path(
  system.file(package = "ggPMX"), "testdata",
  "theophylline"
)
WORK_DIR <- file.path(theo_path, "Monolix")
input_file <- file.path(theo_path, "data_pk.csv")
vpc_file <- file.path(theo_path, "sim.csv")

ctr <- pmx_mlx(
  config = "standing",
  directory = WORK_DIR,
  input = input_file,
  dv = "Y",
  dvid = "dvid",
  cats = c("SEX"),
  conts = c("WT0", "AGE0"),
  strats = "STUD",
  settings = pmx_settings(
    use.labels=TRUE,
    cats.labels=list(
      SEX=c("0"="Male", "1"="Female")
    )
  ),
  sim = pmx_sim(
    file = vpc_file,
    irun = "rep",
    idv = "TIME"
  )
)

ctr %>% pmx_plot_vpc(
  strat.facet=~SEX,
  facets=list(nrow=2),
  type="percentile",
  is.draft = FALSE,
  pi = pmx_vpc_pi(interval = c(0.1,0.9),
    median=list(color="green"),
    extreme= list(color="green")),
  obs = pmx_vpc_obs(color="blue", shape=18, size=2),
  ci = pmx_vpc_ci(interval = c(0.1,0.9),

```

```
        median=list(fill="pink")),
  bin=pmx_vpc_bin("kmeans",n=5)
)

ctr %>%
  pmx_plot_vpc(bin= pmx_vpc_bin(
    style = "fixed",
    fixedBreaks=c(-10,2, 5, 10,15,50))
  )

# example with legend

ctr %>% pmx_plot_vpc(
  is.legend = TRUE,
  pi = pmx_vpc_pi(interval=c(0.02,0.98),median = list(linetype="dotted")),
  ci = pmx_vpc_ci(interval = c(0.05,0.95),median=list(fill="red"))
)
```

---

pmx\_theme

*Define ggPMX theme*

---

## Description

This theme is a simple wrapper gdoc theme from ggthemes package.

## Usage

```
pmx_theme(...)
```

## Arguments

... can contain any valid argument of ggplot2 [theme](#) object.

## Value

ggplot2 theme object

---

pmx_update	<i>Update plot object</i>
------------	---------------------------

---

### Description

Update plot object

### Usage

```
pmx_update(
  ctr,
  pname,
  strat.color = NULL,
  strat.facet = NULL,
  color.scales = NULL,
  filter = NULL,
  trans = NULL,
  ...,
  pmxgpar = NULL
)
```

### Arguments

ctr	pmxClass controller object
pname	character the plot name to update
strat.color	character optional stratification parameter
strat.facet	formula optional stratification parameter
color.scales	list can be used with strat.color to set scale_color_manual <a href="#">pmx_gpar</a> function.
filter	optional filter which will be applied to plotting data
trans	character define the transformation to apply on x or y or both variables
...	others graphical parameters given to set the plot
pmxgpar	a object of class pmx_gpar possibly the output of the

### Details

**trans** is a transformation that user can apply to x, or y coordinates. The transformation is applied to the data before the plotting. This gives more flexibility to the user and also conserves all static positions like annotations ( draft specially)

For example:

var\_x apply variance to x coordinates the variance function

var\_xy apply variance to both This mechanism is applied internally to scale log.

### Value

controller object with the plot updated

**See Also**

---

pmx\_vpc

*Creates vpc object*

---

**Description**

Creates vpc object

**Usage**

```
pmx_vpc(
  type = c("percentile", "scatter"),
  idv = "TIME",
  obs = pmx_vpc_obs(),
  pi = pmx_vpc_pi(),
  ci = pmx_vpc_ci(),
  rug = pmx_vpc_rug(),
  bin = pmx_vpc_bin(),
  labels = NULL,
  facets = NULL,
  is.legend = TRUE,
  is.footnote = TRUE,
  dname = NULL,
  ...
)
```

**Arguments**

type	charcater can be either percentile or scatter
idv	chracater individual variable
obs	pmx_vpc_obs object observation layer <a href="#">pmx_vpc_obs</a>
pi	pmx_vpc_pi object percentile layer <a href="#">pmx_vpc_pi</a>
ci	pmx_vpc_ci object confidence interval layer <a href="#">pmx_vpc_ci</a>
rug	pmx_vpc_rug object rug layer <a href="#">pmx_vpc_rug</a>
bin	pmx_vpc_bin object <a href="#">pmx_vpc_bin</a>
labels	list define title and axis labels
facets	is a list of parameters passed to <code>facet_wrap</code> in case of stratification
is.legend	logical if TRUE add legend
is.footnote	logical if TRUE add footnote
dname	added for compatibility with other ggPMX plots
...	extra parameters passed to base graphical parameters

**Value**

list with parameters of the vpc object

**See Also**

Other vpc: [pmx\\_plot\\_vpc\(\)](#), [pmx\\_vpc\\_bin\(\)](#), [pmx\\_vpc\\_ci\(\)](#), [pmx\\_vpc\\_obs\(\)](#), [pmx\\_vpc\\_pi\(\)](#), [pmx\\_vpc\\_rug\(\)](#)

---

pmx_vpc_bin	<i>Creates vpc bins</i>
-------------	-------------------------

---

**Description**

Creates vpc bins

**Usage**

```
pmx_vpc_bin(style, within_strat = TRUE, seed = 42, ...)
```

**Arguments**

style	character style chosen on of the: "fixed", "sd", "equal", "pretty", "quantile", "kmeans", "hclust" or "jenks"
within_strat	logical if TRUE compute the binning for each strat level. By default it is false and binning are equal for all stratifications levels.
seed	integer used in set.seed call to ensure reproducibility if style is "kmeans". Set to NULL if this is not desired.
...	other classInt::classIntervals parameters except style and n

**Details**

This is a wrapper to the bin based VPC

**Value**

list with options for 'pmx\_vpc\_bin' object

**See Also**

---

pmx\_vpc\_ci                      *Sets vpc confidence interval layer*

---

### Description

Sets vpc confidence interval layer

### Usage

```
pmx_vpc_ci(
  show = c("all", "median"),
  interval = c(0.025, 0.975),
  method = c("ribbon", "rectangle"),
  median = list(fill = "red", alpha = 0.3),
  extreme = list(fill = "#3388cc", alpha = 0.3)
)
```

### Arguments

show	character how areas are displayed: <ul style="list-style-type: none"> <li>• <b>show="all"</b> areas will be displayed for each of the 3 percentiles.</li> <li>• <b>show="median"</b> Show only median area.</li> </ul>
interval	numeric quantiles values default to c(.05, .95)
method	character which areas are displayed: <ul style="list-style-type: none"> <li>• <b>method="ribbon"</b> areas are ribbons.</li> <li>• <b>method="rectangle"</b> areas are horizontal rectangles.</li> </ul>
median	list containing: <ul style="list-style-type: none"> <li>• <b>fill</b> character Color of the area representing the CI for the median. Default: "#3388cc".</li> <li>• <b>alpha</b> numeric Transparency of the area representing the PI for the median. Default=0.3.</li> </ul>
extreme	list containing: <ul style="list-style-type: none"> <li>• <b>fill</b> character Color of the area representing the CI for the extreme percentiles. Default: "#3388cc".</li> <li>• <b>alpha</b> numeric Transparency of the area representing the PI for the extreme percentiles. Default=0.3.</li> </ul>

### Value

list with options for Confidence Interval layer

### See Also

---

pmx_vpc_obs	<i>Sets vpc observation layer</i>
-------------	-----------------------------------

---

**Description**

Sets vpc observation layer

**Usage**

```
pmx_vpc_obs(show = TRUE, color = "#000000", size = 1, alpha = 0.7, shape = 1)
```

**Arguments**

show	logical if TRUE show observation points
color	character Color of the observed endpoint values. Default: "#000000".
size	numeric Size of the observed endpoint values. Default: 1.
alpha	numeric Transparency of the observed endpoint values. Default: 0.7.
shape	numeric Shape of the observed endpoint values. Default: 1.

**Value**

list with options for ggplot2 layer with observations

**See Also**

Other vpc: [pmx\\_plot\\_vpc\(\)](#), [pmx\\_vpc\(\)](#), [pmx\\_vpc\\_bin\(\)](#), [pmx\\_vpc\\_ci\(\)](#), [pmx\\_vpc\\_pi\(\)](#), [pmx\\_vpc\\_rug\(\)](#)

---

pmx_vpc_pi	<i>Sets vpc percentile layer</i>
------------	----------------------------------

---

**Description**

Sets vpc percentile layer

**Usage**

```
pmx_vpc_pi(
  show = c("all", "median", "area"),
  interval = c(0.05, 0.95),
  median = list(color = "#000000", linewidth = 1, alpha = 0.7, linetype = "solid"),
  extreme = list(color = "#000000", linewidth = 1, alpha = 0.7, linetype = "dashed"),
  area = list(fill = "blue", alpha = 0.1)
)
```

**Arguments**

show	character how lines are displayed: <ul style="list-style-type: none"> <li>• <b>show=all</b> lines will be displayed for each of the 3 percentiles. with a shaded area.</li> <li>• <b>show=median</b> Show only median line.</li> <li>• <b>show=area</b> Show only median line and the shaded area</li> </ul>
interval	numeric quantiles values default to c(.05, .95)
median	list containing: <ul style="list-style-type: none"> <li>• <b>color</b> character Color of the median percentile line. Default: "#000000".</li> <li>• <b>linewidth</b> numeric Thickness of the median percentile line. Default: 1.</li> <li>• <b>alpha</b> numeric Transparency of the median percentile line. Default: 0.7.</li> <li>• <b>linetype</b> character Linetype of the median percentile line. Default: "solid".</li> </ul>
extreme	list containing: <ul style="list-style-type: none"> <li>• <b>color</b> character Color of the median percentile line. Default: "#000000".</li> <li>• <b>linewidth</b> numeric Thickness of the median percentile line. Default: 1.</li> <li>• <b>alpha</b> numeric Transparency of the median percentile line. Default: 0.7.</li> <li>• <b>linetype</b> character Linetype of the median percentile line. Default: "solid"</li> </ul>
area	list containing: <ul style="list-style-type: none"> <li>• <b>fill</b> character Color of the shaded area. Default: "blue".</li> <li>• <b>alpha</b> numeric Transparency of the shaded area. Default: 0.1.</li> </ul>

**Value**

list with options for Prediction Interval layer

**See Also**

Other vpc: [pmx\\_plot\\_vpc\(\)](#), [pmx\\_vpc\(\)](#), [pmx\\_vpc\\_bin\(\)](#), [pmx\\_vpc\\_ci\(\)](#), [pmx\\_vpc\\_obs\(\)](#), [pmx\\_vpc\\_rug\(\)](#)

---

pmx_vpc_rug	<i>Sets vpc rug layer</i>
-------------	---------------------------

---

**Description**

Sets vpc rug layer

**Usage**

```
pmx_vpc_rug(show = TRUE, color = "#000000", linewidth = 1, alpha = 0.7, size)
```

**Arguments**

show	logical	If TRUE show bin separators
color	character	Color of the rug. Default: "#000000".
linewidth	numeric	Thickness of the rug. Default: 1.
alpha	numeric	Transparency of the rug. Default: 0.7.
size	numeric	Deprecated thickness of the rug. Default: 1.

**Details**

When the vpc confidence interval layer method is rectangles we don't show rug separators.

**Value**

list with options for the rug layer

**Description**

Print pmxClass object

**Usage**

```
## S3 method for class 'pmxClass'  
print(x, ...)
```

**Arguments**

x	pmxClass object
...	additinal arguments to pass to print

**Value**

print object to screen

---

print.pmxConfig	<i>S3 method print pmxConfig object</i>
-----------------	---

---

**Description**

S3 method print pmxConfig object

**Usage**

```
## S3 method for class 'pmxConfig'  
print(x, ...)
```

**Arguments**

x	pmxConfig object
...	additional arguments to pass to print (unused currently)

**Value**

invisible object

---

print.pmx_gpar	<i>Print pmx_gpar object</i>
----------------	------------------------------

---

**Description**

Print pmx\_gpar object

**Usage**

```
## S3 method for class 'pmx_gpar'  
print(x, ...)
```

**Arguments**

x	pmx_gpar object
...	argument passed to print ( to satisfy generic)

**Value**

a character description of graphical parameters

---

read_extfile	<i>Reads .ext files generated by NONMEM</i>
--------------	---

---

### Description

Reads .ext files generated by NONMEM

### Usage

```
read_extfile(
  run = NA_real_,
  project = getwd(),
  file = paste0(run, ".ext"),
  path = NULL,
  read_fun = c("data.table", "read.table"),
  quiet
)
```

### Arguments

run	run a run number or run identifier
project	project the NONMEM project directory
file	file the 'ext' file name
path	path full path and file name for 'ext' file
read_fun	read_fun function to read the 'ext' file
quiet	Logical, if FALSE messages are printed to the console.

### Value

A list with param, omega, and sigma in a format ready to be used.

### Author(s)

This function is based on read\_nmext from mrgsolve, Original Author: Kyle T Baron. This function has some changes to the original code: Addition of param, "quiet", (option of pmx\_msg function, from xpose package) (Line: 27) The code was slightly adjusted to check for multiple tables and also extract SE (ITERATION == 1000000001) (Line: 44-58, Line: 86-96, respectively) The output was also slightly adjusted to fit ggPMX output (df and df2) (Line: 105,106) as\_bmat was replaced by bmat\_like to create the diagonal matrix (Line 116:142)

### Examples

```
#project <- system.file("nonmem", package = "mrgsolve")
#est <- read_nmext(1005, project = project)
```

---

read_input	<i>Read Modelling input data</i>
------------	----------------------------------

---

**Description**

Read Modelling input data

**Usage**

```
read_input(
  ipath,
  dv,
  dvid,
  cats = "",
  conts = "",
  strats = "",
  occ = "",
  endpoint = NULL,
  id = NULL,
  time = NULL
)
```

**Arguments**

ipath	full path of the input file
dv	character the name of measurable variable used in the input modelling file
dvid	character observation type parameter
cats	<i>[Optional]</i> character vector of categorical covariates
conts	<i>[Optional]</i> character vector of continuous covariates
strats	<i>[Optional]</i> character extra stratification variables
occ	<i>[Optional]</i> character inter individual occasion variables
endpoint	integer null in case of a single endpoint otherwise the index of endpoints.
id	character the name of identifier variable used in the input modelling file.
time	character the name of time variable used in the input modelling file

**Value**

data.table well formatted containing modelling input data

---

read_mlx_ind_est	<i>Read MONOLIX individual parameters</i>
------------------	---

---

**Description**

Read MONOLIX individual parameters

**Usage**

```
read_mlx_ind_est(path, x, ...)
```

**Arguments**

path	character path to the file
x	dataset object
...	extra parameter not used

**Value**

data.table object

---

read_mlx_par_est	<i>Read MONOLIX parameter estimation file</i>
------------------	---

---

**Description**

Read MONOLIX parameter estimation file

**Usage**

```
read_mlx_par_est(path, x, ...)
```

**Arguments**

path	character path to the file
x	dataset object
...	extra parameter not used

**Value**

data.table object

---

read_mlx_pred	<i>Read MONOLIX model predictions</i>
---------------	---------------------------------------

---

**Description**

Read MONOLIX model predictions

**Usage**

```
read_mlx_pred(path, x, ...)
```

**Arguments**

path	character path to the file
x	dataset object
...	extra parameter not used

**Value**

data.table object

---

read_mlx_saem_conv	<i>Read MONOLIX SAEM convergence file</i>
--------------------	---

---

**Description**

Read MONOLIX SAEM convergence file

**Usage**

```
read_mlx_saem_conv(path, ...)
```

**Arguments**

path	string specifying data path folder
...	extra parameter not used

**Value**

data.table object

---

residual	<i>This function create a residual for each observed value and also generates a residual distribution</i>
----------	---

---

### Description

This function create a residual for each observed value and also generates a residual distribution

### Usage

```
residual(
  x,
  y,
  labels = NULL,
  point = NULL,
  is.hline = FALSE,
  hline = NULL,
  dname = NULL,
  facets = NULL,
  bloq = NULL,
  square_plot = TRUE,
  ...
)
```

### Arguments

x	x axis aesthetics
y	y axis aesthetics
labels	list that contain title,subtitle, axis labels
point	geom point graphical parameters
is.hline	logical if TRUE add horizontal line y=0 ( TRUE by default)
hline	geom hline graphical parameters
dname	name of dataset to be used
facets	list wrap facetting in case of strat.facet
bloq	pmxBLOQ object created by <a href="#">pmx_bloq</a>
square_plot	square dv_pred plot (TRUE by default)
...	others graphics arguments passed to <a href="#">pmx_gpar</a> internal object.

### Details

Some parameters are a list of parameters :

**point** is a list that contains:

- **shape:** default to 1

- **color:** default to black
- **size:** default to 1

**labels** is a list that contains:

- **title:** plot title default to AES\_X versus AES\_Y
- **subtitle:** plot subtitle default empty
- **x:** x axis label default to AES\_X
- **y:** y axis label default to AES\_Y

### Value

a residual object

### See Also

[plot\\_pmx.residual](#)

---

residual\_scatter

*Scatter residual plots*

---

### Description

Scatter residual plots

DV vs PRED plot

DV vs IPRED plot

IWRES vs IPRED plot

|IWRES| vs IPRED plot

|IWRES| vs TIME plot

IWRES vs TIME plot

NPDE vs TIME plot

NPDE vs PRED plot

NPD vs TIME plot

NPD vs EPRED plot

NPD vs PRED plot

CWRES vs TIME plot

CWRES vs CPRED plot

CWRES vs PRED plot

**Usage**

```
residual_scatter(  
  sim_blk,  
  point,  
  is.hline,  
  hline,  
  dname,  
  bloq,  
  filter,  
  strat.facet,  
  facets,  
  strat.color,  
  trans,  
  pmxgpar,  
  labels,  
  axis.title,  
  axis.text,  
  ranges,  
  is.smooth,  
  smooth,  
  is.band,  
  band,  
  is.draft,  
  draft,  
  is.identity_line,  
  identity_line,  
  scale_x_log10,  
  scale_y_log10,  
  color.scales,  
  ...  
)  
  
pmx_plot_dv_pred(ctr, ...)  
  
pmx_plot_dv_ipred(ctr, ...)  
  
pmx_plot_iwres_ipred(ctr, ...)  
  
pmx_plot_abs_iwres_ipred(ctr, ...)  
  
pmx_plot_abs_iwres_time(ctr, ...)  
  
pmx_plot_iwres_time(ctr, ...)  
  
pmx_plot_npde_time(ctr, ...)  
  
pmx_plot_npde_pred(ctr, ...)
```

```

pmx_plot_npd_time(ctr, ...)
pmx_plot_npd_epred(ctr, ...)
pmx_plot_npd_pred(ctr, ...)
pmx_plot_cwres_time(ctr, ...)
pmx_plot_cwres_cpred(ctr, ...)
pmx_plot_cwres_pred(ctr, ...)

```

### Arguments

sim_bloq	logical if TRUE uses sim_bloq values for plotting. Only for Monolix 2018 and later.
point	list geom_point graphical parameters.
is.hline	logical if TRUE add horizontal line y=0 ( TRUE by default).
hline	list geom_hline graphical parameters.
dname	character name of dataset to be used. User can create his own dataset using <a href="#">set_data</a> and pass it as dname to be plotted.
bloq	pmxBLOQ object created by <a href="#">pmx_bloq</a> .
	<b>pmx_update parameters</b>
filter	expression filter which will be applied to plotting data.
strat.facet	formula optional stratification parameter by facetting. This split plot by strats(each strat in a facet)
facets	list facet_wrap parameters.
strat.color	character optional stratification parameter by grouping. This will split the plot by group (color) of strat.
trans	character define the transformation to apply on x or y or both variables
pmxgpar	a object of class pmx_gpar possibly the output of the <b>pmx_gpar: Shared basic graphics parameters</b>
labels	list list containing plot and/or axis labels: title, subtitle, x , y
axis.title	list containing element_text attributes to customize the axis title. (similar to ggplot2 axis.title theme)
axis.text	list containing element_text attributes to customize the axis text (similar to ggplot2 axis.text theme)
ranges	list limits of x/y ranges
is.smooth	logical if set to TRUE add smooth layer
smooth	list geom_smooth graphical/smoothing fun parameters
is.band	logical if TRUE add horizontal band
band	list horizontal band parameters. geom_hline graphical parameters.

```

is.draft      logical if TRUE add draft layer
draft         list draft layer parameters. geom_text graphical parameters.
is.identity_line
              logical if TRUE add an identity line
identity_line listgeom_abline graphical parameters.
scale_x_log10 logical if TRUE use log10 scale for x axis.
scale_y_log10 logical if TRUE use log10 scale for y axis.
color.scales  list define scales parameter in case of strat.color pmx\_settings
...           others graphics parameters passed :
              • pmx\_gpar internal function to customize shared graphical parameters
              • residual generic object for all residual (scatter) plots .
              • pmx\_update function.
              • aess can be used to change time variable within the plot (e.g. aess = list(x="TADQBW"))

residual parameters

ctr           pmx controller

```

**Value**

ggplot2 object

**Examples**

```

# NOTES #####
# examples are availables for all residual plots:
# - pmx_plot_abs_iwres_ipred
# - pmx_plot_dv_ipred
# - pmx_plot_dv_pred
# - pmx_plot_iwres_ipred
# - pmx_plot_iwres_time
# - pmx_plot_npde_time

# basic use -----

ctr <- theophylline()
p <- ctr %>% pmx_plot_dv_pred()
## p is a ggplot2 object you can add any layer here
p + ggplot2::theme_minimal()

# update graphical parameter -----

## update labels
ctr %>% pmx_plot_dv_pred(
  labels = list(title = "DV versus PRED new title")
)

## remove draft
ctr %>% pmx_plot_dv_pred(is.draft = FALSE)

```

```

## remove horizontal line
ctr %>% pmx_plot_dv_pred(is.hline = FALSE)

## custom point aes and static parameters
## we can customize any geom_point parameter
ctr %>% pmx_plot_dv_pred(
  point = list(aes(alpha = DV), color = "green", shape = 4)
)

# stratification -----

## continuous stratification
ctr %>% pmx_plot_dv_pred(strat.color = ~WT0)
## categorical stratification
ctr %>% pmx_plot_dv_pred(strat.facet = ~SEX)
## using formula notation
ctr %>% pmx_plot_dv_pred(strat.facet = STUD~SEX)

# subsetting -----

## we can use any expression involving the data
ctr %>% pmx_plot_dv_pred(filter = DV > mean(DV) & PRED < median(PRED))
## filter and stratify
ctr %>% pmx_plot_dv_pred(filter = SEX == 1, strat.facet = ~SEX)

# transformation -----

## apply a log transformation in y
ctr %>% pmx_plot_dv_pred(trans = "log10_y")

```

---

set\_abbrev

*update or add a new abbreviation*

---

## Description

update or add a new abbreviation

## Usage

```
set_abbrev(ctr, ...)
```

## Arguments

ctr	pmxClass controller object
...	Options to set or add, with the form name = value.

**Examples**

```
ctr <- theophylline()
ctr %>% set_abbrev("new_param" = "new value")
ctr %>% get_abbrev("new_param")
```

---

set\_data

*Set a controller data set*

---

**Description**

Set a controller data set

**Usage**

```
set_data(ctr, ..., envir = parent.frame())
```

**Arguments**

ctr	the controller object
...	a named list parameters (see example)
envir	the <a href="#">environment</a> in which expr is to be evaluated. May also be NULL, a list, a data frame, a pairlist or an integer as specified to <a href="#">sys.call</a> .

**Details**

This function can be used to set an existing data set or to create a new one. The basic idea is to change the built-in data set (change the factor level names, change some rows values or apply any other data set operation) and use the new data set using the dname parameter of pmx\_plot family functions.

**See Also**

Other pmxclass: [get\\_cats\(\)](#), [get\\_conts\(\)](#), [get\\_covariates\(\)](#), [get\\_data\(\)](#), [get\\_occ\(\)](#), [get\\_plot\(\)](#), [get\\_plot\\_config\(\)](#), [get\\_strats\(\)](#), [plot\\_names\(\)](#), [plots\(\)](#), [pmx\\_update\(\)](#), [set\\_plot\(\)](#)

**Examples**

```
ctr <- theophylline()
dx <- ctr %>% get_data("eta")
dx <- dx[, EFFECT := factor(
  EFFECT,
  levels = c("ka", "V", "Cl"),
  labels = c("Concentration", "Volume", "Clearance")
)]
## update existing data set
ctr %>% set_data(eta = dx)
## or create a new data set
```

```
ctr %>% set_data(eta_long = dx)
```

---

set_plot	<i>Create a new plot of the desired type</i>
----------	--

---

## Description

Create a new plot of the desired type

## Usage

```
set_plot(
  ctr,
  ptype = c("IND", "DIS", "SCATTER", "ETA_PAIRS", "ETA_COV", "PMX_QQ", "VPC", "PMX_DENS",
            "PARAM_HISTORY"),
  pname,
  use.defaults = TRUE,
  filter = NULL,
  strat.color = NULL,
  strat.facet = NULL,
  color.scales = NULL,
  trans = NULL,
  ...
)
```

## Arguments

ctr	pmxClass controller object
ptype	plot type can be: <ul style="list-style-type: none"> <li>• "IND" Individual plot type: <a href="#">individual</a></li> <li>• "DIS" Distribution plot type: <a href="#">distrib</a></li> <li>• "SCATTER" Residual plot type: <a href="#">residual</a></li> </ul>
pname	plot name, if missing it will be created using function aesthetics
use.defaults	logical if FALSE do not use defaults defined in yaml init files
filter	optional filter which will be applied to plotting data
strat.color	character
strat.facet	formula define categorical stratification as formula
color.scales	list can be used with strat.color to set <code>scale_color_manual</code>
trans	list transformation operator
...	other plot parameters to configure <a href="#">pmx_gpar</a> .

## Value

invisible ctr object

**See Also**

Other pmxclass: [get\\_cats\(\)](#), [get\\_confs\(\)](#), [get\\_covariates\(\)](#), [get\\_data\(\)](#), [get\\_occ\(\)](#), [get\\_plot\(\)](#), [get\\_plot\\_config\(\)](#), [get\\_strats\(\)](#), [plot\\_names\(\)](#), [plots\(\)](#), [pmx\\_update\(\)](#), [set\\_data\(\)](#)

---

theophylline	<i>Creates pmx controller using theophylline data</i>
--------------	---

---

**Description**

Creates pmx controller using theophylline data

**Usage**

```
theophylline(settings = NULL, ...)
```

**Arguments**

settings	pmxSettings object
...	other parameters of pmx_mlx like endpoint

**Value**

pmx controller

**Examples**

```
## Not run:
theophylline()

## End(Not run)
```

---

wrap_formula	<i>merge facets formula with new formula</i>
--------------	--

---

**Description**

merge facets formula with new formula

**Usage**

```
wrap_formula(x, origin = "lfacet")
```

**Arguments**

x	formula object
origin	the origin formula default to ~lfacets

**Value**

formula object

---

[.pmx\_gpar                    *Method for subsetting "pmx\_gpar" objects*

---

**Description**

Method for subsetting "pmx\_gpar" objects

**Usage**

```
## S3 method for class 'pmx_gpar'  
x[index, ...]
```

**Arguments**

x	pmx_gpar object
index	can be character/integer of element
...	other parameter (not used just for generic)

**Value**

if exists the parameter description
