

# Package ‘ppitables’

May 9, 2026

**Type** Package

**Title** Lookup Tables to Generate Poverty Likelihoods and Rates using the Poverty Probability Index (PPI)

**Version** 0.6.1

**Description** The Poverty Probability Index (PPI) is a poverty measurement tool for organizations and businesses with a mission to serve the poor. The PPI is statistically-sound, yet simple to use: the answers to 10 questions about a household's characteristics and asset ownership are scored to compute the likelihood that the household is living below the poverty line - or above by only a narrow margin. This package contains country-specific lookup data tables used as reference to determine the poverty likelihood of a household based on their score from the country-specific PPI questionnaire. These lookup tables have been extracted from documentation of the PPI found at <https://www.povertyindex.org> and managed by Innovations for Poverty Action <https://poverty-action.org/>.

find_table	<i>Search for PPI table by specifying region, country and/or calculation type.</i>
------------	------------------------------------------------------------------------------------

---

**Description**

Search for PPI table by specifying region, country and/or calculation type.

**Usage**

```
find_table(
  region = steer$region,
  country = steer$country[steer$region %in% region],
  type = steer$type[steer$country %in% country]
)
```

**Arguments**

region	Region of the world to search PPI table from. Default is c("Africa", "Asia", "Eastern Europe and Central Asia", "Latin America and the Carribbean", "Middle East and North Africa"). Allows specification of one region or a vector of regions.
country	Country to search PPI table from. Default is vector of all country names from the specified region/s. Allows specification of one country name or a vector of country names.
type	Type of PPI calculation used. Can be one of two options: "sps" for the Simple Poverty Scorecard calculation or "ipa" for the International Poverty Alliance calculation. Default is vector of all calculation types available for the specified country/ies.

**Value**

A data frame in tibble format of corresponding PPI table/s matching the search parameters. The data frame contains information on the region, country, description, survey year, release year, calculation type, and filename of the returned PPI table/s.

**Examples**

```
## View the full data frame of all the PPI tables available through ppitables
find_table()
```

---

get\_table

*Get PPI table/s based on a specified PPI table/s search output*

---

**Description**

Get PPI table/s based on a specified PPI table/s search output

**Usage**

```
get_table(
  region = steer$region,
  country = steer$country[steer$region %in% region],
  type = steer$type[steer$country %in% country]
)
```

**Arguments**

region	Region of the world to search PPI table from. Default is c("Africa", "Asia", "Eastern Europe and Central Asia", "Latin America and the Carribbean", "Middle East and North Africa"). Allows specification of one region or a vector of regions.
country	Country to search PPI table from. Default is vector of all country names from the specified region/s. Allows specification of one country name or a vector of country names.
type	Type of PPI calculation used. Can be one of two options: "sps" for the Simple Poverty Scorecard calculation or ipa for the International Poverty Alliance calculation. Default is vector of all calculation types available for the specified country/ies.

**Value**

A data frame in tibble format of corresponding PPI table/s matching the search parameters. The data frame is in tidy format and contains the corresponding poverty probability (ppi) for a specific score (score) for various poverty definitions) for the country (country) and PPI calculation type (type).

**Examples**

```
## Create a tidy format PPI table for Nepal
get_table(region = "Asia", country = "Nepal")
```

---

ppiAFG2012

*Poverty Probability Index (PPI) lookup table for Afghanistan*

---

**Description**

Poverty Probability Index (PPI) lookup table for Afghanistan

**Usage**

```
ppiAFG2012
```

**Format**

A data frame with 7 columns and 101 rows:

score PPI score

n1 National poverty line

nu150 National poverty line (150%)

nu200 National poverty line (200%)

extreme USAID extreme poverty

ppp125 Below \$1.25 per day purchasing power parity (2005)

ppp250 Below \$2.50 per day purchasing power parity (2005)

**Source**

<https://www.povertyindex.org>

**Examples**

```
# Access Afghanistan PPI table
ppiAFG2012

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiAFG2012[ppiAFG2012$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiAFG2012, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the USAID
# extreme poverty definition
ppiScore <- 50
ppiAFG2012[ppiAFG2012$score == ppiScore, "extreme"]
```

ppiAGO2015

*Poverty Probability Index (PPI) lookup table for Angola***Description**

Poverty Probability Index (PPI) lookup table for Angola

**Usage**

```
ppiAGO2015
```

**Format**

A data frame with 9 columns and 101 rows:

```
score PPI score
n1100 National poverty line (100%)
n1150 National poverty line (150%)
n1200 National poverty line (200%)
half100 Poorest half below 100% national
ppp125 Below $1.25 per day purchasing power parity (2005)
ppp200 Below $2.00 per day purchasing power parity (2005)
ppp250 Below $2.50 per day purchasing power parity (2005)
ppp500 Below $5.00 per day purchasing power parity (2005)
```

**Source**

<https://www.povertyindex.org>

**Examples**

```
# Access Angola PPI table
ppiAG02015

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiAG02015[ppiAG02015$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiAG02015, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
# poverty line definition
ppiScore <- 50
ppiAG02015[ppiAG02015$score == ppiScore, "extreme"]
```

---

ppiBEN2012

*Poverty Probability Index (PPI) lookup table for Benin*

---

**Description**

Poverty Probability Index (PPI) lookup table for Benin

**Usage**

```
ppiBEN2012
```

**Format**

A data frame with 7 columns and 101 rows:

score PPI score

n1100 National poverty line (100%)

n1150 National poverty line (150%)

n1200 National poverty line (200%)

extreme USAID extreme poverty

ppp125 Below \$1.25 per day purchasing power parity (2005)

ppp250 Below \$2.50 per day purchasing power parity (2005)

**Source**

<https://www.povertyindex.org>

**Examples**

```
# Access Benin PPI table
ppiBEN2012

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiBEN2012[ppiBEN2012$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiBEN2012, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the USAID
# extreme poverty definition
ppiScore <- 50
ppiBEN2012[ppiBEN2012$score == ppiScore, "n1100"]
```

---

 ppiBEN2022\_11q

*Poverty Probability Index (PPI) lookup table for Benin for 2022 for 11 questions score card*

---

**Description**

Poverty Probability Index (PPI) lookup table for Benin for 2022 for 11 questions score card

**Usage**

```
ppiBEN2022_11q
```

**Format**

A data frame with 14 columns and 101 rows:

score PPI score

n1100 National poverty line (100%)

n1150 National poverty line (150%)

n1200 National poverty line (200%)

ppp190 Below \$1.90 per day purchasing power parity (2011)

ppp320 Below \$3.20 per day purchasing power parity (2011)

ppp550 Below \$5.50 per day purchasing power parity (2011)  
 ppp215 Below \$2.15 per day purchasing power parity (2017)  
 ppp365 Below \$3.65 per day purchasing power parity (2017)  
 ppp685 Below \$6.85 per day purchasing power parity (2017)  
 percentile20 Below 20th percentile poverty line  
 percentile40 Below 40th percentile poverty line  
 percentile60 Below 60th percentile poverty line  
 percentile80 Below 80th percentile poverty line

### Source

### Examples

```

# Access Benin PPI table
ppiBEN2022_11q

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiBEN2022_11q[ppiBEN2022_11q$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiBEN2022_11q, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the USAID
# extreme poverty definition
ppiScore <- 50
ppiBEN2022_11q[ppiBEN2022_11q$score == ppiScore, "n1100"]

```

---

ppiBEN2022\_6q

*Poverty Probability Index (PPI) lookup table for Benin for 2022 for 6 questions score card*

---

### Description

Poverty Probability Index (PPI) lookup table for Benin for 2022 for 6 questions score card

### Usage

ppiBEN2022\_6q

**Format**

A data frame with 14 columns and 101 rows:

score PPI score  
 n1100 National poverty line (100%)  
 n1150 National poverty line (150%)  
 n1200 National poverty line (200%)  
 ppp190 Below \$1.90 per day purchasing power parity (2011)  
 ppp320 Below \$3.20 per day purchasing power parity (2011)  
 ppp550 Below \$5.50 per day purchasing power parity (2011)  
 ppp215 Below \$2.15 per day purchasing power parity (2017)  
 ppp365 Below \$3.65 per day purchasing power parity (2017)  
 ppp685 Below \$6.85 per day purchasing power parity (2017)  
 percentile20 Below 20th percentile poverty line  
 percentile40 Below 40th percentile poverty line  
 percentile60 Below 60th percentile poverty line  
 percentile80 Below 80th percentile poverty line

**Source**

<https://www.povertyindex.org>

**Examples**

```
# Access Benin PPI table
ppiBEN2022_6q

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiBEN2022_6q[ppiBEN2022_6q$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiBEN2022_6q, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the USAID
# extreme poverty definition
ppiScore <- 50
ppiBEN2022_6q[ppiBEN2022_6q$score == ppiScore, "n1100"]
```

### Description

Poverty Probability Index (PPI) lookup table for Morocco

### Usage

ppiMAR2013

### Format

A data frame with 9 columns and 101 rows:

score PPI score  
n1100 National poverty line (100%)  
n1150 National poverty line (150%)  
n1200 National poverty line (200%)  
extreme USAID extreme poverty  
ppp125 Below \$1.25 per day purchasing power parity (2005)  
ppp250 Below \$2.50 per day purchasing power parity (2005)  
ppp375 Below \$3.75 per day purchasing power parity (2005)  
ppp500 Below \$5.00 per day purchasing power parity (2005)

### Source

<https://www.povertyindex.org>

### Examples

```
# Access Morocco PPI table
ppiMAR2013

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiMAR2013[ppiMAR2013$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiMAR2013, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
```

```
# poverty line definition
ppiScore <- 50
ppiMAR2013[ppiMAR2013$score == ppiScore, "n1100"]
```

---

ppiMDG2015

*Poverty Probability Index (PPI) lookup table for Madagascar*

---

### Description

Poverty Probability Index (PPI) lookup table for Madagascar

### Usage

```
ppiMDG2015
```

### Format

A data frame with 9 columns and 101 rows:

```
score PPI score
n1100 Food poverty line
n1150 National poverty line (100%)
n1200 National poverty line (150%)
median National poverty line (200%)
ppp125 Poorest half below 100% national
ppp200 Below $1.25 per day purchasing power parity (2005)
ppp250 Below $2.00 per day purchasing power parity (2005)
ppp500 Below $2.50 per day purchasing power parity (2005)
```

### Source

<https://www.povertyindex.org>

### Examples

```
# Access Madagascar PPI table
ppiMDG2015

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiMDG2015[ppiMDG2015$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
```

```
subset(ppiMDG2015, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
# poverty line definition
ppiScore <- 50
ppiMDG2015[ppiMDG2015$score == ppiScore, "n1100"]
```

ppiMEX2017

*Poverty Probability Index (PPI) lookup table for Mexico using legacy definitions*

---

### Description

Poverty Probability Index (PPI) lookup table for Mexico using legacy definitions

### Usage

```
ppiMEX2017
```

### Format

A data frame with 8 columns and 101 rows:

```
score PPI score
n1Food Food poverty line
n1Capability Capabilities
n1100 National poverty line (100%)
n1125 National poverty line (125%)
n1150 National poverty line (150%)
ppp125 Below $1.25 per day purchasing power parity (2005)
ppp250 Below $2.50 per day purchasing power parity (2005)
```

### Source

<https://www.povertyindex.org>

### Examples

```
# Access Mexico PPI table
ppiMEX2017

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiMEX2017[ppiMEX2017$score == ppiScore, ]
```

```

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiMEX2017, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
# poverty line definition
ppiScore <- 50
ppiMEX2017[ppiMEX2017$score == ppiScore, "n1100"]

```

**Examples**

```
# Access Tanzania PPI table
ppiTZA2016

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiTZA2016[ppiTZA2016$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiTZA2016, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
# poverty line definition
ppiScore <- 50
ppiTZA2016[ppiTZA2016$score == ppiScore, "n1100"]
```

---

 ppiTZA2022

*Poverty Probability Index (PPI) lookup table for Tanzania 2022*

---

**Description**

Poverty Probability Index (PPI) lookup table for Tanzania 2022

**Usage**

```
ppiTZA2022
```

**Format**

A data frame with 21 columns and 100 rows:

```
score PPI score
n1_upper National upper poverty line
n1_lower National lower poverty line
extreme Extreme poverty line
n1150 National poverty line (150%)
n1200 National poverty line (200%)
ppp100 Below $1.00 per day purchasing power parity (2011)
```

ppp190 Below \$1.90 per day purchasing power parity (2011)  
 ppp320 Below \$3.20 per day purchasing power parity (2011)  
 ppp550 Below \$5.50 per day purchasing power parity (2011)  
 ppp800 Below \$8.00 per day purchasing power parity (2011)  
 ppp1100 Below \$11.00 per day purchasing power parity (2011)  
 ppp1500 Below \$15.00 per day purchasing power parity (2011)  
 ppp2170 Below \$21.70 per day purchasing power parity (2011)  
 ppp125 Below \$1.25 per day purchasing power parity (2005)  
 ppp250 Below \$2.50 per day purchasing power parity (2005)  
 ppp500 Below \$5.00 per day purchasing power parity (2005)  
 percentile20 Below 20th percentile poverty line  
 percentile40 Below 40th percentile poverty line  
 percentile60 Below 50th percentile poverty line  
 percentile80 Below 60th percentile poverty line
