shoulders

Find Out Who Maintains the Packages you Use

Description

This function helps to identify what packages you depend on. It finds the maintainers and the number of packages they maintain.

Usage

```
shoulders(where = c("session", "library", "package"), package,  
          include_dependencies = TRUE)
```

Arguments

where	either look in the current loaded "session", your whole "library" or for a specific "package"
package	if where is "package" then this must be a character vector of positive length
include_dependencies	if where is "package" then use this to include all dependencies of the package. Otherwise it will just return the maintainer.

Details

Note, if you do a package lookup you connect to a CRAN mirror.

Value

A data.frame showing all packages you depend on with these three columns:

- maintainer The maintainer as in the DESCRIPTION file
- no_packages The number of packages of that maintainer
- packages A comma separated list of those packages

Examples

```
## Not run:  
# identifies the packages currently loaded in your session  
shoulders() # equal to shoulders("session")  
  
# shows all maintainers of your package library  
shoulders("library")  
  
# find out about a specific package  
# by default it lists all dependencies of that package as well  
shoulders("package", "utils", include_dependencies = FALSE)  
shoulders("package", "utils")  
  
## End(Not run)
```

thankr

Find Out Who Maintains the Packages you Use

Description

Find out who maintains the packages you use in your current session or in your package library.

Details

This package exposes a single function `shoulders` that helps you identify the maintainers of your favorite packages.
